Lot Title/Description

Fine American Percussion Pistol by A. Peterman of Philadelphia Very Crisp Colt Model 1860 Army Richards Conversion Revolved .50 caliber, 9" octagon barrel with a bright excellent smooth bore. This serial #4287, 44 CF, 8" barrel with a bright minty bore. This revolver pistol is of extremely high quality and remains in very fine condition. The shows matching numbers on the barrel, frame, cylinder, triggerguard top of the barrel is marked "A. PETERMAN 131 WALNUT ST. and backstrap, the wedge is unnumbered. This is the transitional or PHILADA" and the patent breech shows a fancy bolster. The lock is "Second Model" revolver with two-line patent dates on left side of frame. engraved with a fine wavy line border and beautiful relief scroll along The cylinder shows all of its wonderful naval engagement scene which with maker name "A. PETERMAN". The hammer is beautifully formed remains crisp. The metal surfaces show about 95% original nickel plated with a handsome tall and forward leaning spur. Abraham Peterman was finish with some flaking along the outside edge of the ejector rod located next door to the famous Krider shop and he was active during housing with the balance of the loss being on the backstrap and the the second half of the 19th century. The condition of the pistol is triggerguard. The exposed brass on the triggerguard bears a pleasing excellent with the barrel retaining a good deal of original brown finish untouched patina. The one-piece walnut grip rates excellent with about with the surfaces remaining smooth and with lots of Damascus pattern 80% original finish remaining and with the loss being due to even visible. The patent breech and tang show lots of faded original color thinning on the left side. The grips have just normal light handling marks case hardening and are beautifully engraved in relief scroll. The lock and fit perfectly to the straps. This is a very fine, high condition example and hammer are a beautiful mix of mottled color case hardening and a of the Richards Converted 1860 Army revolver. (1C9670-498) smooth gray patina. The walnut stock has a typical Philadelphia form {ANTIQUE} [David & Lore Squier Collection] (3000/5000) and rates excellent with crisp checkering on grip, nice clean edges and Est. 3,000 - 5,000 perhaps 90% original finish with just a few light handling marks from the Fabulous Deluxe Percussion Halfstock Sporting Rifle by D.H. Hilliard of 5 years. The finger spur triggerguard houses a set trigger and terminates Cornish, New Hampshire in a pineapple finial. The triggerguard is mostly a smooth brown patina .38 caliber. 29" octagon barrel turned at muzzle for starter and with a with loss due to flaking and with some original blue visible in areas. The bright excellent bore. This is a lovely Hilliard rifle, perhaps the finest we have ever offered. When one hears the name Hilliard, likely the image wedge escutcheons are of iron and show light border engraving. The pistol is sighted with a small iron blade front and v-notch rear which is that comes to mind is of an underhammer rifle of which he made many. neatly mounted within the tang. A finely made 19th century Philadelphia He also made traditional rifles with back action and front action locks. percussion pistol in a fine state of preservation (1C9670-179) This example features a back action lock and is German silver mounted {ANTIQUE} [David & Lore Squier Collection](2000/3000) and engraved. The top left flat of the barrel is marked "D.H. HILLIARD / Est. 2,000 - 3,000 CORNISH, / N.H.", "CAST-STEEL" and is serial numbered "1609". The Fine British Flintlock Officer's Pistol by Richards 2 bottom flat under stock is marked "62 G.H. NUTT 2" and on left bottom .58 caliber, 9" part round part octagon pin fastened barrel with a near flat just ahead of breech "ALLEN THURBER & CO / CAST-STEEL" The very good bore. This is a fine, high condition British pistol. The lock is lock shows simple scroll with shaded background along with a simple an engraved "Richards" ahead of cock with recessed rear section with endearing border pattern. The top of the barrel shows light scroll ahead pronounced teat. The lock features a gooseneck cock and a roller of rear barrel sight and the top surface of the long tang sight is engraved frizzen. The brass mounted stock shows a lightly engraved butt with long with large loose scroll which is reminiscent of the loose scroll engraving lobes, a large, lightly engraved flat sideplate and the triggerguard found on Dutton rifles which were made in Jaffrey, NH. The fancy round terminates in an acorn shaped finial at the front. Based upon the lock German silver patchbox is engraved as is the finger spur triggerguard, shape, roller frizzen and other architecture, we are dating this pistol to sideplate, buttplate, toeplate and wedge escutcheons. The forend tip is the first half of the 19th century. The barrel shows Birmingham proofs of pewter and it is also engraved. The barrel breech shows light and has a stylish transition to round with chamfered edges of octagonal engraving, as does the tang, and the outer surface of the bolster shows section to a wedding band and then to round. The condition is wonderful light scroll. All engraving is clean and somewhat folky and endearing with the barrel retaining a pleasing mix of original brown finish and and is what we would expect to see on a 19th century New Hampshire patina and remains quite smooth with little if any pitting present. The made gun. The rifle is equipped with double set triggers which function lock shows a light, even gray brown patina with crisp marking and again properly however the hammer does not guite hold on full cock. The the metal remains smooth. The walnut stock rates excellent with 90% condition of the rifle is excellent with the barrel retaining 75% evenly plus original finish, clean edges and just the normal light handling marks thinning original blue finish overall. The lock shows lots of original color from the years. The brass furniture all shows a mellow undisturbed case-hardened finish which has softened slightly but has a nice patina. The horn tipped ramrod appears to be of hickory and is at least appearance. All iron surfaces remain smooth and free of pitting. The period and could be original. This is a very fine British flintlock officer's stock is of very nicely figured American black walnut and features a pistol. (1B9833-58) {ANTIQUE} (2000/3000) lovely shadowline cheekpiece with plain oval German silver monogram Est. 2,000 - 3,000 plate at center. The stock rates excellent with 95% original finish Fine Cased Colt Model 1855 Root Revolver remaining and with just normal light handling marks most prevalent on 3 serial #28274, .28 caliber, 3 1/2" octagon barrel with an excellent bore. the left side. The rifle is sighted with a globe front, open sporting real with elevator and a long cantilevered tang sight with sliding elevator This model 3 revolver shows the Hartford barrel addressed octagon barrel with full fluted cylinder; the Hartford address with crosses at either which engages hand cut adjustment grooves filed across the tang. A end of the marking. The revolver shows matching numbers on the simple hickory ramrod is present beneath barrel. All furniture fits frame, bottom of barrel and rear face of cylinder. The revolver remains in beautifully, the cheekpiece inlay being the exception as it is lifting very fine condition retaining about 70% original blue finish overall with slightly. This rifle is illustrated in Ned Robert's famous work The Muzzle-Loading Cap Lock Rifle on page 152. This is an extremely fine loss due only to flaking and confined mostly to the barrel. There is also Hilliard rifle, certainly among the finest remaining examples of his work. some flaking on the backstrap but the areas where the blue remains (1E9670-114) {ANTIQUE} [David & Lore Squier Collection] (3500/5500) show rich deep lovely original blue. The hammer shows vivid original color case hardened finish as does the loading lever. The one piece Est 3 500 - 5 500 walnut grip rates excellent with virtually all of its original finish and hardly a handling mark. The revolver comes in a rare right handed factory casing which remains in the same lovely condition as the revolver. The case is lined in green baize which remains rich in color but showing proper wear in the contact points. The case includes an eagle flask which retains over 90% original lacquer and a dual cavity Colt's Patent mould which shows 90% original blue. Also included is a cap tin and the case key. All partitions are intact and the exterior of the case shows lots of original finish with drying cracks in the lid which remain sound. The case has proper soft wood bottom and shows crisp scribe marks around the hinges and lock. A very handsome Root that shows very little use (1B9670-492) {ANTIQUE} [David & Lore Squier Collection] (3000/5000) Est. 3,000 - 5,000

Riflo

Lovely Diminutive New York Mule Ear Percussion Boys Rifle by
Medbery
32 cal., 22" round barrel with Rigby flats and a bright excellent bore.
This is an exceptionally lovely and very simple boys or ladies rifle and
appears to have seen very little, very careful use over the years. The
barrel retains perhaps 93% original browning, the loss is due to some
even fading and light wear from the years. It shows a simple diminutive
silver blade front sight with a shallow v-notch rear, showing strong trace
pale fire blue, with "J Medbery/Rochester" on the top flat rib. The tang
shows some excellent quality etched foliate "engraving" and is a dull
pewter gray patina. Lockplate shows the very lightest engraving with a
beveled edge showing a diminutive border, the ear of the hammer
showing open wide scroll with some geometric decoration. The hammer
shows some strong remnant fire blue with some colors on the lock,
especially where the hammer covers that portion of the plate. There is a
simple pewter nosecap and a very lightly engraved tailpipe with the wide
bow triggerguard having a pineapple finial front extension, which is
engraved with some wide open scroll on the bow of the guard and the
rearward grip flourish. There is a thin diminutive steel buttplate with very
light engraving on the tang, it gives a length of pull to the brass trigger of
13". The American walnut buttstock rates excellent with much original
varnish, crisp wraparound checkering patterns with mullered borders,
showing only light handling marks or scratches from the years. There is
a clipped-corner rectangular monogram plate atop the wrist which is
un-engraved and a very nice little silver star-shaped inlay on the left side
of stock where the cheek would sit. The arm seems to function well
mechanically and the ramrod is a later antique replacement without
ferrules. There is a tiny amount of pitting in the cap splash area around
the nipple, but overall the rifle appears to have seen very little use and
was very well cared-for. Joseph Medbery was granted a patent for a
mule ear lock in 1826 and was active in Rochester circa 1826-1840,
when he sold out to William Billinghurst circa 1841, his other business
ventures taking precedence over his gun shop, he would become fairly
wealthy and influential in the Rochester area. This very rifle is pictured
on pages 1116-7 of The New York State Firearms Trade book series,
volume 3 © Rowe. The overall length of this lovely little New York State
÷ ,
rifle is 36 3/8" tipping the scales at just a tad over 3 1/2 pounds.
(39670-455) {ANTIQUE} [David & Lore Squier Collection] (1800/2200)
Est. 1,800 - 2,200
Fine William Billinghurst Underhammer Percussion Buggy Rifle
.31 cal., 14 1/2" part round part octagon barrel with a very good bore.
This is an endearing little rifle which is built as a diminutive version of
Billinghurst's full-size underhammer takedown target rifles. The top of
the barrel is marked "W. BILLINGHURST ROCHESTER, N.Y." and
shows a single threaded vacant hole just ahead of the breech. The
barrel is held to the action with a tapered steel pin passing laterally
through the frame and barrel stud. The breech section of barrel is nicely
engraved and the frame shows lovely engraved motif at breech along
with border and screw engraving. The barrel is beautifully formed with
chamfered forward edge of octagon leading to a wedding band and then
5 5 5 5
to round. The ramrod tube is mounted to the bottom of the octagon
section with large ribs on either side. The barrel shows about 90%
evenly thinning original blue finish which is blending to brown and has a
wonderful appearance. The frame and breech show faded original color
case-hardened finish with some scattered light oxidation staining in
some areas. The checkered pistolgrip stock shows lovely shell carving
on base of pistolgrip and the checkering is typical Billinghurst style being
checkered borderless to the triggerguard and barrel tang. The stock
rates very good plus with most of its original finish and with a single filled
hole in the toeline and the coarse checkering remains clean. The barrel
note in the toeline and the coarse checkening remains clean. The Daffel
and buttetock of the rifle, when taken down, are almost identical in
and buttstock of the rifle, when taken down, are almost identical in

serial #13602, 38-40 Remington CF., 28" part round part octagon barrel with a bright excellent bore. This rifle features many special-order options including a heavier than standard barrel which is the same size as the action at breech, fancy checkered stocks, Swiss buttplate and special sights. The top of the octagonal section of the barrel is marked with the "E. REMINGTON & SONS" address and the underside of the round section ahead of forend is marked simply "38". The frame shows the six-line patent marking on left side which remains crisp and the screw slots are quite clean. The gun shows all matching numbers on frame, barrel, end grain of forend and lower tang inlet of stock. The buttplate is unnumbered but fits perfectly and appears to have been in place since day one. The rifle remains in very nice condition with no added holes or other alterations of any kind. The barrel retains about 85% evenly thinning original blue finish overall blending with a smooth brown patina where thinning. The action shows about 85% original color case-hardened finish which is brighter on the left side and with a little more blending to brown on the right, but surfaces are smooth and free of any pitting. The hammer and breechblock retain about 90% original blue finish. The checkered pistolgrip buttstock and horn tipped forend show very nice figure and rate excellent with lots of original finish remaining and perhaps a light coat of added oil. The Swiss buttplate is of brass and retains 95% original nickel plated finish. The checkering shows just very light wear and there are the normal light handling marks from the years. The rifle is sighted with a windgauge front with spirit level, blank in rear seat and Remington short-range Vernier tang mounted peepsight. This rifle is illustrated and discussed in Marcot's Remington Rolling Block Sporting and Target Rifles on page 263. Special order deluxe No. 2 Remington rifles are quite scarce and this is a very fine example for the Remington collector. (1D9670-132) {ANTIQUE} [David & Lore Squier Collection] (2000/4000) Est. 2,000 - 4,000 Fabulous Remington Rolling Block No. 1 Long Range Creedmoor Rifle serial #464 8, 44-77 Remington, 34" part round part octagon barrel with a bright excellent bore. This rifle is in spectacular condition and features all matching numbers. The barrel is marked with the "E. REMINGTON & SONS" address and is caliber marked on bottom of round section ahead of forend "44S". The action shows proper six-line patent dates which are crisp with raised metal around each letter. The barrel retains about 95% original blue with a little light oxidation staining but with nice edges and a deep rich color. The action retains 95% original color case-hardened finish which remains quite vivid with a little very light scattered oxidation staining present. The checkered pistolgrip buttstock and smooth forend rate excellent plus with virtually all of their original finish, nice raised grain feel and crisp checkering. The pistolgrip is the curved style with ebony insert. The rifle is sighted with a windgauge front with spirit level, there is no provision for a rear barrel sight and a long-range folding Vernier tang mounted peepsight is present. This rifle shows very little use, everything fits perfectly, screwheads are clean with lots of blue. An extremely handsome, high condition and investment grade Remington Long Range Creedmoor Rifle. (1D9670-90) {ANTIQUE} [David & Lore Squier Collection] (7000/9000) Est. 7,000 - 9,000 Virtually As-New Remington Model No. 6 Falling Block Rifle in Original Box serial #457160, 32 RF, 20" round barrel with a bright excellent, perhaps even unfired, bore. This lovely rifle comes in its original factory box, with end label which matches the configuration precisely. The barrel retains about 97-98% original blue, the loss due primarily to some even fading but with extremely light muzzle wear and bit of wear near the breech end. The frame retains 98-99% original vivid color case-hardening, as-does the pivoting breech block. The hammer shows darkening color case-hardening while the trigger shows all its original gray-blue. The smooth walnut buttstock and scant forend rate excellent plus with all of their original varnish, showing a handful of very tiny or minor handling marks here and there, the circled "Remington UMC" trademark buttplate with nearly all its original blue showing only light wear at the heel and toe. The red two piece boxed rates a very fine, the bottom showing a couple very likes scuffs to the paper covering, with a couple of wear marks and scuffs on the interior but remains very solid. The lid is similar showing perhaps a bit more scuffing and wear along the sharp edges, but with a lovely and label printed in black ink on buff colored paper, along with a bit of antique ink pen in-writing along its left edge. The interior has the factory "Instructions for No. 6 Remington Rifle" label on the interior of the lid, it is mostly present with an about 3" piece missing

from the lower left corner. The underside of the box shows a pencil marking which appears to be "gap/3.25", no doubt the price of the rifle at some point in its history. A beautiful investment-grade No. 6 falling block which appears to have seen very little or virtually no use since leaving Ilion. (3C9670-67) {C&R} [David & Lore Squier Collection] (1200/1800)

sunburs	
	cellent bore. This rifle is beautifully engraved on lock with scroll,
	ts and nice border work. The barrel breech and tang show this
same lo	vely engraving and the top flat section of the barrel is engraved
in fancy	script "J. Medbery Rochester". The three raised ribs on the
	re on the top and sides, the top flat extends to the end of the
	and has fancy scroll engraving at the termination point, the side
	nds half this distance. The rifle has silver furniture which is all
	ngraved including the triggerguard, buttplate, toeplate, and even
the side	s of the forend cap are engraved with sunbursts. The
triggerg	uard terminates in a fancy pineapple finial to the front, the
toeplate	with a very similar motif. In addition to the silver mounts, there
	e gold accents as well. The stock flat opposite the lock shows a
	old inlay which is engraved with opposing interlocked triangles
-	
	ower blossom at the center. The wedge escutcheons are also of
-	are a pair of six pointed stars which appear on the left and right
cheek re	ests and a small wrist plate. The lock is affixed by a single screw
through	the lock and into the breech plug. The hammer is broken with
	half missing, this likely accounting for the superb condition of the
	e barrel retains about 90% original brown finish overall with
	-
	amascus pattern visible its entire length. There are a couple
	of light oxidation and pitting near the muzzle and a little
	d light oxidation staining. The lock, breech and tang show nearly
all of the	eir original color case-hardened finish which has mottled slightly
over tim	e but has a lovely appearance. The stock is of highly figured
	an black walnut and is made with both left and right handed
	eces each with the previously mentioned gold star inlay. The
	finely checkered and the toeline of stock is stamped "A.C.
	L" neatly with a one-piece stamp. The condition of the stock is
exceller	at with 97% original finish remaining and with sharp edges, crisp
checker	ing and perfect fit. The rifle is sighted with a simple stud front,
open re	ar and small folding tang mounted windage adjustable
	ht. The top ramrod thimble is missing however, the lower thimble
	nt, so a talented gunsmith could fashion an exact replacement
	sily. This rifle is illustrated and discussed in Swinney & Rowe's
The Nev	w York State Firearms Trade on page 1115, the book states that
Bursiel	was an "old-time mayor of Rochester" although we have been
unable t	o confirm that. The rifle is outstanding, clearly Medbery put a lot
	and pride into building it. A top shelf New York made percussion

	Percussion Double Fowler by John Mullin of New York
12 bore	, 29" barrels with bright excellent bores. This double is a
standar	d grade, unembellished and remains in virtually brand-new
conditio	n. Each lockplate is engraved "JOHN MULLIN", the top rib of
	marked "JOHN MULLIN NEW YORK". The barrels show
	ham proofs on their undersides and retain 97% original brown
, v	
	d damascus pattern their entire length. The locks, barrel
	es and tang retain 95% original color case-hardened finish which
remains	quite vivid. The triggerguard and buttplate also show lots of
	color case-hardened finish which is just fading slightly. The
-	ed straight grip walnut stock shows some figure and rates
	at with 95% original finish remaining and with very crisp
	с , , , , , , , , , , , , , , , , , , ,
	ing. There is one small chip in the edge of the forend on the left
	a ding in the right center of butt. The original rosewood ramrod
	nt beneath barrel and all screw heads are properly indexed and
untouch	ed. John Mullin is thought to have been the uncle of Patrick
	another New York maker who made similar guns. He advertised
	built guns of equal quality as the imports, looking at this gun, he
	eaking of British guns and this gun is a testament to that claim.
vvood to	o metal fit is superb. A near mint, plain Jane 19th century New
1	uble fowler. (1E9670-168) {ANTIQUE} [David & Lore Squier
Collection	00 - 3,000

Very Fine New York State Percussion Double Rifle by Smith .42 cal, 32" round barrels showing bright near excellent bores which show only a few sparsely scattered spots of light oxidation or perhaps a spot or two of light pitting. The barrels remain wonderful retaining nearly all of their original plum brown finish showing only some light rub wear or handling marks from the years, with the oddly scattered spots of oxidation interspersed here or there. The original shallow dovetail front sight has been replaced with a simple brass blade, there is a silver inlaid gradient scale ahead of the dovetail, likely which once held a "pointer front" front sight, the rear is a semi-buckhorn with shallow v-notch and the rib is engraved in fancy script "F Smith". The fancy swirled bolsters show some remnants of case-hardening with a light spray of open foliate scroll on the rib, the long tang similarly embellished with a vacant hole for a no-longer-present tang sight. Both lockplates and hammers are a very pleasing smooth tarnished pewter patina and feature light filigree borderline engraving with very simple open scroll front and rear, game birds left and right and "Smith" engraved in fancy open script. The hammers show the lightest foliate engraving with dolphin's heads at their noses, the cap deflection skirts neatly relieved by the maker for their entire front half, the rear half acting as skirts deflecting the caps from the shooters eye. The tailpipe is lightly engraved German silver and the dovetail front extension and bow of the single spur guard show some very light scroll as well. This continues on the toeplate, the grip flourish and the tang of the crescent butt. The rifle is stocked in American black walnut, the stock rating excellent with much original varnish and only light handling marks and dings from field use. It features a nice pendulum-style right side patchbox with very light engraving and an eagle on the lid, the left side with an interesting German silver inlay of an eagle, and what is likely a lion, peeking out from behind the federal shield, this atop the square-bottom cheekpiece. The rifle is equipped with double set triggers which seem to function well, the locks are single-acting and will not cock if the trigger is not "set". If the trigger is set and both hammers are set to half cock, then set to full cock, when the trigger is tripped both will fire simultaneously. Other than these peculiarities, the locks seem to function well mechanically and what is likely a later replacement ramrod is included. Frederick Smith of Springport New York, in the area around Auburn, was active roughly 1852 perhaps around 1880. He was known as a very fine workman and this rifle is quality-made throughout and is constructed identically to other examples identified to, and known to be had have been made by him. A top-shelf New York State double rifle. (3B9670-83) {ANTIQUE} [David & Lore Squier Collection] (2500/4000) Est. 2,500 - 4,000

Lot Title/Description

Stunning Exhibition Quality Early Remington Rolling Block No. 1 Sporting Rifle .43 Spanish, 30" part round part octagon barrel with a bright minty bore. This is a very interesting and extremely fine Remington Rolling Block rifle that appears to be unfired. The rifle has unique features including a steel cleaning rod mounted beneath barrel and an unusual frame with scallops to front and rear. The only markings on the rifle appear on the top tang "REMINGTON'S ILION, N.Y. U.S.A. / PAT. MAY 3d NOV 15th 1864 APRIL 17th 1868". The barrel shows London proofs and has a wonderful knurled ring at the transition from octagon to round. The elegantly shaped action is engraved in lovely relief intertwining scroll with beautifully executed and varying borders. The right side of the frame shows a coat of arms that is yet to be identified but depicts standing winged and hoofed animals at either side of a heraldic crest which shows tridents within the crest and crossed above the crest. The engraving is in full coverage including the breechblock, hammer, buttplate tang, forend tip and the barrel, both at breech section and at muzzle. The barrel engraving is on the octagon section and features borders with loose scroll which is tastefully executed. The cleaning rod fits snugly in a full-length channel neatly soldered to the bottom of the barrel with two thimbles holding the rod. The rod threads into a stud in the front of the action and features a slotted jag style tip. The condition of the rifle is superb with 99% original blue remaining on the barrel. The action retains 99% original color case-hardened finish with very crisp engraving. The face of the breechblock still shows vivid color with no evidence of firing a cartridge. The rifle is equipped with a factory adjustable single set trigger which is slightly gummy but seems to function properly. The walnut stock and forend are beautifully figured and retain 99% of their original finish overall. The rifle is sighted with a Lyman hunting front and Remington combination rear sight. This rifle is featured in Roy Marcot's Remington Rolling Block Sporting and Target Rifles on pages 120 & 121 where it is heavily illustrated and described. Marcot seems uncertain, as are we, as to whether this is rifle was finished here or in Europe. The rifle wears American black walnut stocks, factory sights and trigger, yet the barrel treatment at the transition is highly unusual for a Remington. There are no assembly numbers on any of the stocks or tangs, the barrel is completely unnumbered and unmarked. The question is, was this finished in this style by Remington or was it embellished and finished in Europe. The lack of assembly numbers indicates it is a special rifle that was being worked on individually. The frame is specially shaped and the stocks are American. Remington employed and contracted with some of the very finest engravers of the 19th century, many of whom were immigrants who mastered their craft in Europe. One thing is certain, this is an extremely fine, highly embellished Remington Rolling Block made for an important person or event. A stellar Remington Rolling Block rifle worthy of the finest Remington Collection. (1G9790-66) {ANTIQUE} [Bob Borcherdt Collection] (10,000/20,000) Est. 10,000 - 20,000

	Nathaniel Whitmore
	.36 cal, 25 1/2" part octagon part round barrel with a bright excellent bore, with original false muzzle and brass starter and .46 cal 23 1/2" part
	octagon part round barrel with a bright excellent smooth bore. Really a
	very fine rifle, as we have come to expect from Whitmore. The longer
	target and sporting barrel retains a fading original plum and blue-brown
	for most of its length, the faded or flaked spots now a pewter gray
	beneath the finish, the case-hardened breech showing much original
	color and light engraving. Sighted with a globe front sight with diminutive lollipop insert, fire-blued flat-top u-notch sporting rear with step elevator
	and a lollipop-style fire blued tang sight, the left diagonal flat is marked
	"N Whitmore/Cast Steel". There is a nice turned medial at the point of
	transition with an additional smaller grooved band and the under rib
	shows some sparsely scattered light pitting which is unobtrusive. The
	second barrel shows 98% excellent quality restored plum brown with
	some light open loose engraving surrounding the simple bead style front sight with a bit more near the single engraved medial at the point of
	transition, and a bit more at the case-hardened engraved hooked
	breech. The top flat shows two extremely professionally-filled dovetails
	with two small filled holes near the breech, all four very neatly
	camouflaged, and is marked "N Whitmore" with a bit of light engraving
	on the nipple bolster. The back action lock and hammer retain some
	nice smoky color case-hardening with open flowing foliate scroll and
	vertical line background accented shading, the same treatment on the
	full-length long upper tang. The rifle features German silver hardware with a sparsely engraved nosecap, tailpipe, square-bottom single spur
	triggerguard with the same wide open scroll, repeated on the toeplate,
	and tang of the crescent buttplate. The triggerplate shows strong pale
	fire blue in the protected areas, flaked in the front extension ahead of
	the guard, with a bit of nice engraving there as well. The arm is stocked
	in American black walnut, the stock proper rating excellent with some
	nice crackling finish and only light handling marks from the years, with a
	small repaired crack at the left front of nosecap. It features a nice pendulum-shaped German silver patchbox with open loose scroll and
	similar engraving on the oval German silver inlay on the rounded left
	side cheekpiece. The lock is crisp and mechanically functional and the
	rifle has a single set trigger which operates properly (currently the spring
	is too weak to drop the hammer but the set feature works properly). The
	rifle comes cased in what is possibly its original walnut case with faded
	pinkish baize lining. On the interior is an appropriate brass single cavity
	bullet mould, a bullet swage, couple of small tools, a patch cutter and a nice nipple wrench that also has two turnscrew inserts which fit into the
	hollow handle (the lid of the handle is a later replacement as well). Also
	included are an assortment of cast projectiles, they are 36 caliber
	picket-style bullets which appear to have come from the included mould
	and are likely unswaged; two ramrods are included, one appears to be
	original, the other a later replacement. It is likely that the shorter
	smoothbore barrel was in the midst of restoration, no doubt the consignor was likely going to have that barrel relined to the same caliber
	as the longer target-length barrel, it likely having been the "field" barrel
	for this rifle back in the day. A very handsome Nathaniel Whitmore
	two-barrel rifle with some nice correct accessories. (3C9670-5)

	Est. 3,000 - 5,000
30	Excellent U.S. Model 1871 Army Rolling Block Pistol by Remington serial #4171, 50 CF, 8" round barrel with a bright excellent bore. The
	barrel of this lovely pistol retains about 96% original blue showing some
	sparsely scattered light freckling, minor silvering at the muzzle and
	toning to a pleasant plum-brown patina under bright light. The action
	retains about 98% lovely vibrant case-hardened colors showing some
	scattered very fine mild freckling and perhaps some faint muting along
	the tangs. The hammer, breechblock and pin retainer remain bright showing just a hint of mild brown freckling along the top of the hammer
	and breechblock spur, while the small parts retain almost all of their
	brilliant fire blue and straw finishes. The Remington's Ilion address and
	patent dates along the left side frame remain crisp and clear, the left
	side also with proper "P" and "S" proof marks. The smooth walnut grip
	and forend remain in excellent condition retaining most of their arsenal
	oil finish and showing just a few tiny dings or light handling marks. The
	grip is stamp-numbered matching the frame and retains a wonderful crisp "CRS" inspector cartouche on the left side. The action may require
	a little attention as the breechblock does not quite retract all of the way,
	perhaps requiring a thorough cleaning, and the hammer otherwise
	functions crisply. This is a lovely Army pistol for the advanced
	Remington or U.S. martial collection. (13C9670-182) {ANTIQUE} [David
	& Lore Squier Collection] (3000/5000)

#### Lot Title/Description

Fine Pair of British Pattern 1756/77 Flintlock Sea Service Pistols
.57 caliber, 12" pin fastened barrels with very good bores. These pistols
are in very fine condition. Both barrel show two deeply struck ordnance
proofs and the locks are marked "TOWER" in vertical arch to rear of
cocks and show the "(crown) / GR" ahead of cock. One lock shows a
"(crown) / V" proof while the other shows a "(crown) / 2". The pistols are
each equipped with their original steel belt hooks and the brass furniture
includes flat sideplates with tails to the rear, brass butts with short lobes,
triggerguards with stylized finials, single ramrod thimbles with no
tailpipes. The iron surfaces show an even gray patina overall, likely
lightly cleaned long ago but with very nice smooth surfaces. All markings
in metal remain clear and fully legible. The locks feature reinforced
cocks with bridled frizzens. The stocks show crown and broad arrow
marks along with the initials "HJ" stamped into the rear stock flat on one
of the pistols. The stocks show nice edges but also numerous light
handling marks and the forestocks show areas where there is a pattern
lightly impressed into the wood, similar to a vise mark but we aren't
certain if that is what they are. The guns are in original flint and show
very little use with very clean toucholes. Pistols match perfectly in
condition and have clearly been together since the beginning. Both guns
retain their original brass tipped wooden ramrods. A very fine unaltered
pair of 18th Century British Sea Service pistols, far better than normally
encountered. (1D9833-63) {ANTIQUE} (6000/8000)
Est. 6,000 - 8,000

Lot Title/Description

> Famed Exhibition Shooter Ernie Lind's "Worlds Most Highly Embellished Smith & Wesson .357 Magnum Hand Ejector Revolver" serial #S84079, .357 Magnum, 8 3/8" barrel with a bright excellent bore. This is an exceptionally embellished and exceedingly stunning revolver, with what is perhaps the nicest pair of Alvin White carved grips we have encountered. Miraculously this museum grade piece of art was actually used in exhibition shooting by the famed "Shooting Linds" Ernie and Dot Lind, trick and exhibition shooters for the Winchester Repeating Arms Company, Western Cartridge Company, MGM Motion Pictures and the United States Army to name a few. The revolver retains all of its post-engraving nickel finish and is treated with full coverage tight flowing scroll engraving with the finest vertical line background accenting, with exceptional quality game scene vignettes gracing the frame. The right side of the arm shows a pair of fighting bull elk, a buck whitetail deer and bighorn sheep, while the left shows a charging bear, a scowling bobcat and a pronghorn antelope with a large bull moose head on the face of the frame at the crane pivot. There is crosshatch and geometric engraving on the butt, underside of the ejector rod shroud and the sides of the factory checkered barrel rib, with open flowing scroll on the sight ramp. Both hammer and trigger retain virtually all of their original vibrant color case-hardening with just a bit of light, light wear. The revolver wears a pair of carved genuine ivory grips with a silver S&W medallions, unmistakably the work of Alvin White with his lower grip-filling forward flare, which fills the frame void directly to the rear of the triggerguard. The left side shows open flowing scroll with floral embellishment around the grip screw, the right side with a standing bull elk amidst a Rocky Mountain backdrop, each with nice brown-toned ink staining accenting the background: the work is unmistakably Alvin Whites and is identical to signed examples, even the grip screw is lightly engraved. The revolver is sighted with a white outline rear sight and Patridge style orange front blade, and is actually a twin to a pre-model 27 auctioned in 2012, also engraved by Boch, that example with simple carved walnut grips by White. Included with the arm is a copy of The Complete Book of Trick and Fancy Shooting © 1972 Ernie Lind, in-which is a picture of Dot Lind shooting the gun, upside down and backwards with the aid of a mirror. The actual original black and white glossy of that photo is included, under magnification one can see this is indeed the exact gun that Mrs. Lind is shooting in the picture. Also included is one of Ernie Lind's promotional pamphlets from "Gunthunder Hill" (their home in West Swanzey, New Hampshire) showing a picture of Lind himself on the cover along with additional images on the inside, including pictures of his "bullet art", with a promotional narrative on the rear. An additional photograph is included showing the gun among a number of other similarly engraved and embellished Lind firearms, many of which are included in the book, and there is a large 8x10 black and white of Mrs. Lind with the revolver also, dated March 1957. Interestingly the sister revolver sold in 2012 was described as "One of the Most Highly Engraved Smith & Wessons in the World!", this example certainly on par with, and in this writers opinion more embellished than, that example, even the "panels" beneath the grips showing scroll engraving which lacked on the previous example, thusly if one ever installed "service style" grips on this arm it would still be full coverage engraved. Factory records will confirm shipment in August 1951 to distributor Jurek Brothers of Greenfield Mass. for shooter Ernie Lind. Rarely does a revolver this exceptional come up for public auction, to have it be part of the former collection of these famous trick and exhibition shooters places the gun in another genre entirely, making it all the more desirable. Outwardly the arm appears as-new, as it came from Waffen Boch of Frankfurt Germany after this master-level full coverage engraving was completed, one would never guess that it was used by Dot and Ernie Lind in their many feats of exhibition and trick shooting. Exhibition grade, investment-grade, worthy of the finest collection of Smith & Wesson arms. (39777-1) {C&R} (10,000/15,000) Est. 10.000 - 15.000

This is a very nice 1876 production civilian Single Action. The revolver shows .38 caliber, 10" octagon barrel with an excellent bore. This very nice all matching numbers on barrel, frame, cylinder, triggerguard and pistol which remains in a superb state of preservation. The lock is "A.W. SPIES / WARRANTED" and shows endearing rudimentary scroll backstrap. The barrel shows the proper block letter address for this engraving. The top of the barrel is marked simply "ROGERS" with serial range and the frame shows the proper two-line patent date. The metal surfaces of revolver show a lovely rich, undisturbed brown patina border engraving at breech and with nicely engraved tang. The fit of the with all markings remaining clear and legible. The revolver shows the barrel at the locking tang is recessed slightly on the top three flats with correct doughnut shaped ejector rod head and the cylinder pin retaining the sides being flush, this seems a bit unusual but considering the fit of screw shows considerable wear from the years. The one-piece walnut the drum to the lock and of the barrel to the stock, there is no doubt the grip rates very good plus, very much commensurate with the balance of barrel is original to the pistol. As previously stated the gun has lots of the revolver showing wear to lower edge with some small old worn over condition, the barrel retains 95% original brown finish overall with strong chips to toe and heel. The revolver cycles crisply and locks up tight. The and beautiful damascus pattern visible its entire length. The lock is an gun comes with a factory letter confirming the configuration and showing even gray patina remaining completely smooth and free of pitting with it as part of a 50 gun shipment to Schuyler, Hartley & Graham in New markings and engraving crisp. The lock is affixed by a screw through the York on October 7, 1876. This revolver has lovely surfaces and is just a lockplate and into the breech plug. The stock is of walnut with horn great example of an honestly used antique revolver in as-found forend tip and checkered grip with rounded butt. The furniture is of condition. (1B9898-22) {ANTIQUE} (3000/5000) German silver and includes an engraved triggerguard with stylized pineapple finial, rectangular wedge escutcheons with faceted corners, a Est. 3,000 - 5,000 41 Excellent Smith & Wesson 357 Magnum Hand Ejector Revolver rectangular monogram plate on top of wrist, a rectangular monogram serial #S103494, 357 Magnum, 3 1/2" barrel with an excellent bore. This plate with concave corners on stock flat and an engraved tailpipe. The magnificent Pre-Model 27 five-screw revolver appears stock remains in wonderful condition with sharp checkering and 95% as-new-in-the-box and remains in excellent condition. The metal original finish. A brass tipped ebony ramrod is mounted beneath barrel surfaces retain about 99% original blue finish with a scant wear mark on and remains in excellent condition and appears original in all respects. the left side of frame and very tiny ding on the forward right side of the The pistol is sighted with a German silver blade front and open rear frame. The service trigger and hammer have beautiful case-hardened mounted in shallow dovetail in top flat of barrel. There were several colors with light operational wear. The diamond checkered walnut Rogers working in America at the time, at least two or three of them factory Magna grips with silver S&W medallions rate excellent a few were in Philadelphia and based on the style of this gun, we attribute it to handling marks on the left panel. As you would expect on such a one of them. This is a fine, all original 19th century American percussion well-cared-for piece, all appropriate parts and the grips are correctly pistol. (1C9670-501) {ANTIQUE} [David & Lore Squier Collection] numbered to the gun and it appears unfired. The firing pin bushing, (1000/2000) recoil shield and cylinder face show none of the tell-tale signs of use Est. 1,000 - 2,000 other than the factory test fire. This gun includes the original gold two-piece box that is correctly end labeled and numbered to the gun. The box features the instructions printed on the inside of the cover and serial number grease penciled on the bottom. The box rates excellent showing minor handling wear and few light creases on the sides. The interior of the box has a simple 1 1/16" thick wood spacer used as a filler in the box on shorter barreled guns. This is a great find for the collector. (8B9880-4) {C&R} (2000/3000) Est. 2.000 - 3.000 Smith & Wesson K-22 Outdoorsman Hand Ejector Revolver 42 serial #634279, 22 LR, 6" barrel with an excellent bore. This is a lovely 1st Model that was produced very early in the series and remains in superb condition. The metal surfaces retain about 98-99% original blue finish, most of the loss due to sparse toning at the muzzle with a few interspersed handling marks and a very small scratch on the barrel. The service trigger and patent marked hammer retain bold case-hardened colors with light operational wear. The diamond checkered walnut grips are in wonderful condition and look as fresh as the day they left Springfield. They feature a silver S&W medallion and are numbered to the gun. The numbered parts on this fine gun are correct and it still times and locks up beautifully. This gun features a pre-micrometer adjustable rear sight and Call flat gold bead front sight. A handsome Outdoorsman in fine collectible condition. (8A9722-6) {C&R} (1500/2000) Est. 1,500 - 2,000

Lot Title/Description

Wonderful Deluxe American Flintlock Pistol by J.M. Caswell of Lansingburgh, New York .45 caliber, 8 3/4" gently tapered octagon barrel with a very good plus bore. This is a very fine quality pistol with many endearing features. The barrel is double gold banded at breech and is marked on top flat "J. M. CASWELL / LANSINGBURGH"; the last few letters of the latter trail off. The barrel tang has a simple rear sight at the junction with the barrel and is engraved in light relief scroll. The lock features a waterproof pan, gooseneck cock and roller frizzen with stepped portion to rear of cock and tasteful 19th century scroll. The stock is of finely figured burl walnut and features a sharply curved and short grip profile with thick, beautifully shaped stock flats. The stock adorned with silver inlays which include a lovely stylized American eagle in the rounded butt, a long rectangular monogram plate with concave corners on left stock flat, a smaller monogram plate on top of wrist and the silver wedge escutcheons are all the same rectangular shape. The iron triggerguard is engraved with a fancy wheat sheaf and pineapple finial with scroll and a panoply on the bow. The condition is nice with the barrel showing a gray brown mix of patina and finish with Damascus pattern subtly visible overall. The barrel surfaces show some impact marks along with some patches of light pitting and some light oxidation staining, none of this is overly obtrusive. The lock bears a pleasing even gray brown patina and is very smooth with just a little light oxidation to the front and rear of the pan. The stock shows stunning figure and has a wonderful surface showing lots of original finish, sharp edges with a minor chip from left side top just ahead of breech and another in the edge of the lock flat just above recess in tail of lock. The silver inlays all show a lovely even tarnish. A hickory ramrod with brass tip on one end and iron worm on the other looks original and fits beautifully. The single ramrod thimble is reaffixed and may be a nicely aged replacement as the ridges at the ends are more rudimentary than those on the tailpipe. The pistol features a German silver blade front and simple rear sights. This pistol is pictured on page 337 of The New York State Firearms Trade identified as a "Gentlemen's Pistol'. American flintlock pistols of this quality and condition are not often encountered on the market. A wonderful American flintlock pistol which is a true piece of Americana. (1D9670-180) {ANTIQUE} [David & Lore Squier Collection] (3000/5000) Est. 3,000 - 5,000 Fine Percussion Converted Pistol by J. M. Caswell of Lansingburgh, NY .45 caliber, 8 3/4" octagon barrel with a very good deeply rifled bore. This is a wonderful example of these scarce New York made pistols. The imported lock is marked "R. ASHMORE / WARRANTED" ahead of hammer with loose folky scroll with a bird to the rear of the hammer. The top of the barrel is marked "J.M. CASWELL / & SON / LANSINGBURGH / 1830" with loose folky scroll and tasteful wheatsheaf border. Based on the shape of the lockplate this appears to have featured a waterproof pan and has been converted via drum and nipple. The conversion is very neatly done with a nicely formed hammer which has a pleasing appearance. The silver mounted walnut stock features a short grip with rounded butt. The condition of the gun is nice with the barrel retaining a pleasing smooth brown patina with some twist pattern visible within the patina. The lock is a rich brown patina with just the smallest amount of fine pitting and oxidation present. The lock and barrel markings all remain clear and legible The stock retains a good deal of original finish with well-defined edges and a horn forend tip. The stock features silver wedge escutcheons, a silver monogram plate (unengraved) on left flat along with silver monogram plate on top of wrist and an oval silver plate capping the butt. There are some nicely done old repairs on either side of forend at top edge. The triggerguard is engraved in loose floral scroll and has a pineapple finial. The triggerguard is mostly a smooth brown patina with some bright blue still visible on the bow. The gun comes with what appears to be its original brass tipped ramrod with jag and bullet puller along with an unusual stepped iron section in toward the center of the rod. The rod if of very nice quality and the bottom of the stock has four letters or characters carved between the tailpipe and triggerguard finial. This is an interesting, unusual and very nice quality American pistol. This pistol is pictured on page 341 of The New York State Firearms Trade as a "Gentlemen's Percussion Pistol". (1C9670-503) {ANTIQUE} [David & Lore Squier Collection] (800/1200) Est. 800 - 1,200

47	American Percussion Target Pistol by Morgan James of Utica, New York
-1	
	.45 caliber, 10" octagon barrel with a very good bore which shows
	strong rifling and a bit of light scattered pitting. The barrel is turned at
	the muzzle for a bullet starter and is marked on the top flat "M. JAMES /
	UTICA N.Y." This pistol is unembellished but finely crafted. The barrel is
	equipped with a patent breech with finely formed bolster. The barrel
	shows a good deal of original brown finish with the breech showing
	mottled original color case hardening. The lockplate is unmarked and
	retains a pleasing smooth pewter gray patina overall. The pistol features
	a set trigger which functions properly. The stock is of beautifully figured
	American black walnut with large checkered grip and a horn tip. The
	stock rates very good with normal handling marks from the years and
	with a good deal of original finish remaining. The finely cut checkering
	shows overall light wear, commensurate with the balance of the pistol.
	The gun is sighted with a globe front and tang mounted lollipop rear,
	there is no provision for a rear barrel sight. Morgan James is very
	well-known for his superb quality percussion sporting and target rifles
	along with combination guns; his handguns are quite scarce. A pistol of
	very similar construction and identical stock configuration is pictured in
	The New York State Firearms Trade and noted as "one of the great
	rarities from Morgan James". (1B9670-499) {ANTIQUE} [David & Lore
	Squier Collection] (1200/1800)

48	Very Fine Marlin Model 1897 Lever Action Rifle
	serial #195146, 22 RF, 24" octagon barrel with full magazine and a
	bright very good plus bore showing a few sparsely scattered small areas
	of light pitting, some mild frosting and strong rifling throughout. The
	barrel and magazine of this rifle retain about 90% original blue with most
	of the loss due to some overall thinning to mild gray patina along the
	barrel, along with a few scattered pinprick pits and some minor handling
	marks. The action retains about 95% lovely original case-hardened
	colors showing a few sparsely scattered tiny pinprick pits and areas of
	mild muting to silvery case-hardened patina along the lever and tangs
	and the top of the action showing some scattered thin scratches. The
	colors remain particularly stunning along the left side and protected
	areas around the trigger. The rear sight, breechblock and other small
	parts retain about 90% original bright blue showing some mild flaking
	and thinning, the screw heads show good fire blue and all of the
	markings remain crisp and clear. The plain walnut stocks remain in near
	excellent condition retaining about 98% original varnish that shows
	some very fine crazing along with a couple tiny dings and minor handling
	marks. Metal-to-wood fit remains excellent and the stocks show some
	nice raised grain. The original black checkered hard rubber buttplate is
	intact and rates very fine showing a mild scuff at the heel. The rifle is
	sighted with standard sporting rear sight, Marble's No. 2 white bead front
	sight and the action seems to function well mechanically. A lovely Marlin
	made around 1899. (13B9790-32) {C&R} [Bob Borcherdt Collection]

Lot Title/Description

50 Magnificent Winchester Model 1894 Factory No. 10 Engraved Deluxe Rifle serial #85393, 25-35 WCF, 26" part round part octagon barrel with a bright excellent bore. This is a truly stunning rifle. The action of this rifle shows factory No. 10 style engraving consisting of relief scroll and border engraving. The left side of the action shows the same lovely scroll and border work with a round panel at the center showing a walking buck. There is light scroll on the bottom of the action near the serial number and more on the top ring of action and on top tang behind the hammer. The rifle features deluxe checkered walnut buttstock and forend with checkered hard rubber shotgun buttplate and a hard rubber grip cap. The left side of the lower tang bears assembly code "9664 xxx s", the top tang inlet is marked in pencil "9664" and the end grain under the buttplate is stamped "9664". The condition of the rifle is remarkable with the barrel and magazine retaining 98% bright original blue. The action shows 98% bright original blue finish, the engraving is sharp and displays beautifully. The hammer and lever show strong original color case-hardened finish. The checkered pistolgrip walnut buttstock is of beautifully figured American black walnut with lots of feather crotch on each side of the butt. The stocks rate excellent with 98% original finish remaining with just a few light handling marks. There is a small chip at the toe of the buttplate which was neatly repaired, and a corresponding repair to a tiny chip at the toe: it was so neatly done that it is nearly invisible. The checkering remains strong with perhaps a little light carry wear on the forend. The rifle is sighted with a king rotary triple bead front and buckhorn rear sights. The rifle is completely honest with no alterations of any kind. The included record sheet from Cody lists the gun as: rifle, 25-35. 1/2 octagon, plain trigger, checkered stock, pistol grip, shotgun butt, rubber buttplate, engraved \$2,00 style 10, light pull, received in the warehouse on November 15, 1904 and shipped on December 14th of the same year. This is a very high condition factory engraved 1894 rifle worthy of the finest Winchester Collection. Investment quality. (1E9899-26) {C&R} (15,000/25,000) Est. 15,000 - 25,000 Fine Maynard Second Model Civil War Carbine by Mass. Arms Co. 51 serial #24980, .50 cal, 20" round barrel with octagonal breech and a bright near excellent bore showing a patch of light oxidation nearer the muzzle and otherwise crisp rifling throughout. The barrel of this attractive carbine retains about 96% original blue showing a few specks of mild oxidation staining nearer the muzzle, some scattered light handling marks and some areas toning to a pleasant plum-brown patina under bright light. The action retains about 90% color case-hardening that is muting to an attractive silvery case-hardened patina along the right side, also showing a few tiny spots of old oxidation staining, some light handling marks and the underside and left side showing wonderful vibrant colors still with remnants of protective lacquer. The sling bar and ring are a bright silvery patina, the buttplate shows some generous flakes of bright blue, toning to a nice plum-brown patina and the hammer and trigger retain 95% original bright blue showing some mild flaking along the hammer. A number of the screw heads show light slot wear and all markings remain crisp and clear with Maynard patent information on the left side frame, Mass. Arms Co. markings on the right and small sub-inspector stamps throughout. The smooth walnut buttstock remains in near excellent condition retaining about 95% original oil finish showing a few minor handling marks and some sparsely scattered light dings, a few a bit more noticeable along the left side. The wood shows lovely raised grain throughout, metal-to-wood fit is excellent and there are two crisp cartouches on the left wrist. The barrel locks up securely and the hammer functions crisply. A very handsome Maynard for the Civil War collector. (13B9833-37) {ANTIQUE} (2500/3500) Est. 2.500 - 3.500

52	Fine Smith Civil War Commercial Carbine by Mass. Arms Co. serial #11805, .50 cal, 21 5/8" part round part octagon barrel with a bright excellent bore. The barrel of this very fine carbine retains about 97% original blue showing some mild thinning at the muzzle, a small area of minor freckling along the left side and a few scattered handling marks. The action retains about 90% lovely vibrant case-hardened colors showing a few scattered specks of old oxidation staining, some light handling marks and the left side muting to a pleasant silvery case-hardened patina. The barrel band and buttplate have mostly flaked to a deep plum-brown patina showing remnants of original bright blue, while the sling bar and ring are mostly gunmetal patina showing a little brown freckling. The triggerguard retains about 95% original bright blue showing some light flaking along the bow and the action latch spring retains a healthy amount of fine pale fire blue, many of the screw heads also with nice pale fire blue. The Poultney & Trimble address and Mass. Arms Co. maker-markings on the left side frame remain crisp and clear. The smooth walnut stock and forend remain in very fine condition, the buttstock near excellent, showing a strong oil finish with some scattered light handling marks. The forend shows a shallow dent on the right side and a tiny repaired chip with a little bit of filler ahead of the screw escutcheon. The barrel is matching the frame and locks up well and the hammer functions crisply. Schuyler, Hartley & Graham were the most prominent commercial retailers of the Smith Carbine during the war atthough most were purchased by the Federal government. (13B9833-8) (ANTIQUE) (2000/3000) Est. 2,000 - 3,000
	serial #15489, .54 cal, 21" barrel with a bright excellent bore. The barrel of this handsome carbine retains about 96% original blue showing some mild silvering at the muzzle, a few sparsely scattered specks of minor oxidation staining and light handling marks. The barrel is toning slightly to an attractive deep plum under bright light, retains crisp markings and is matching the frame. The action retains perhaps 95% lovely case-hardened colors that remain quite vibrant overall showing a little brown freckling, mostly along the tangs and top corner of the left side, and areas muting to an attractive silvery case-hardened patina and smooth gray. The buttplate is mostly plum-brown showing some remnants of silvery case-hardened patina and the barrel band retains most of its case-hardening toned to a smooth gray. The lever and internal protected areas of the breechblock retain about 92% lovely bright fire blue and the chamber is pristine and shows no evidence of firing. The patent markings at the top of the action were lightly struck but remain legible, the Burnside Rifle Co. markings on the sideplate remain strong and the major components show strong sub-inspector stamps. The smooth walnut stock and forend remain in very good plus condition showing a few tiny shallow chips or mild abrasions scattered along the butt, some other more mild handling marks and otherwise strong oil finish. There is a softened but legible "E.M.D." along the top of the comb and "H.D.H." along the bottom of the forend, there is no visible inspector's cartouche along the left side wrist. All original hardware is intact, the serialized parts are matching and the action seems to function well mechanically. A very fine Burnside for the Civil War collector. (13C9833-2) (ANTIQUE) (2500/3500)
54	Very Fine Gwyn & Campbell Type II Civil War Carbine serial #2675, .52 cal, 20" part round part octagon barrel with a bright excellent bore. The barrel of this carbine retains about 92% original blue showing some sparsely scattered spots of brown freckling, light handling marks and areas thinning and toning to a pleasant plum-brown patina under bright light. The action retains a similar amount of lovely case-hardened colors showing some mild muting to silvery gray patina along the lockplate and lever, some sparsely scattered mild brown speckling and otherwise vibrant colors throughout with strong protective lacquer. The breechblock and upper tang retain about 80% brilliant fire blue thinning to mild gray-brown along the tang and showing some moderate flaking and a few scattered light dings along the breechblock. The breechblock pivot screw head shows nice straw color and the rear sight parts likewise retain nice fire blue. The markings remain mostly strong, one letter in the maker markings on the lockplate obscured by a small metal imperfection, the right side frame with "UNION RIFLE" and the major components with small sub-inspector stamps. The smooth walnut stock remains in very fine condition with strong arsenal oil finish showing some scattered light dings and mild handling marks. The stock retains excellent metal-to-wood fit and shows nice raised grain with a crisp inspector's carbuche on the left side and smaller initials at the heel. All original hardware remains intact, the serialized parts are matching and the action seems to function well mechanically. A handsome Gwyn & Campbell with fine original finish. (13C9833-3) {ANTIQUE} (2500/3500)

Lot Title/Description

55 Extremely Rare Factory Engraved and Plated Deluxe Winchester Model 1873 Saddle Ring Carbine serial #360262, 44 WCF, 20" round barrel with full magazine and a very good bright bore. Any special order feature on a Winchester 1873 Saddle Ring Carbine is rare, this carbine has many of them. The carbine features a fancy stock, \$2.50 engraving, gold plated action and trim with the balance plated in nickel. The carbine is very honest in nature but shows years of use but no abuse, and it hasn't been enhanced by any 20th century gunsmith. The action shows scroll engraving in moderate coverage with a running deer in a round panel scene on the left sideplate. The dust cover, ring of action and front of top tang all shows light scroll engraving while the bottom of the follower and frame show small sections of scroll. The lower tang has had a riband engraved around the serial number and there is one small area of scroll on the buttplate tang, the bands are unembellished. The barrel retains about 65% original nickel plated finish with markings remaining clear and legible, the magazine is more brown and retains perhaps 15% original nickel plated finish in protected areas closest to the barrel. The lever and hammer show about 60% original nickel plated finish with areas of loss showing a deep brown patina. The action is an overall even gray-brown patina with surfaces remaining guite smooth and generally free of any pitting but showing a few scattered old light dings in the surface. The carbine stock and forend show exceptional figure and rate very good with perhaps 50% original finish and with numerous light 5 handling marks. The gun is sighted with standard carbine sights and the top barrel band screw is broken off with tip in place and head missing. Carbines are known as working guns and apparently even when they are as embellished as this one is, they still go to work. Very special order, showing honest use and never having had any "help". This carbine is super rare and has lots of character. (1D9746-31) (6000/8000) Est. 6,000 - 8,000 Winchester Model 1866 Third Model Saddle Ring Carbine 56 serial #77174, 44 CF, 20" round barrel with full magazine and a fair bore with dark pitted grooves. The right side of the action is marked with three "0" adjacent to each other just ahead of the stock. The barrel and magazine retain a gray brown patina with perhaps some old added cold blue. There is some pitting on the barrel that is moderate to heavy and there are also some bruises in the surface. The action shows a pleasing mellow patina with numerous light handling marks from the years. The hammer and lever are a dark gray patina both showing some pitting. The plain walnut buttstock and forend rate very good as refinished long ago. The original brass rifle style buttplate is numbered to the gun and shows a nice patina which matches the action quite well. The rifle is sighted with original barrel sights consisting of the front being integral 6 with the top band and a two-leaf pivoting rear sight. A nice old '66 carbine which had a good honest service life. (1C9779-8) {ANTIQUE} (3000/5000) Est. 3,000 - 5,000 Lovely Southern Agent Marked Philadelphia Percussion Deringer 57 .49 caliber, 5" round barrel with flattened top and octagonal breech. This is a very nice large size deringer which bears "MAND FOR / W.H. CALHOUN / AGENT / NASHVILLE. TENN.". The lock is maker marked "DERINGER / PHILADA" as is the top of the barrel breech. All markings remain clear and fully legible, the barrel also having a "P" mark on top left flat of breech. The barrel shows an overall grav pating with some scattered light surface pitting along with some oxidation staining in some areas. The breech, tang and lock are a darker and more smooth patina with tasteful 19th century scroll engraving. The German silver mounted stock is of walnut and rates near excellent with about 70% original varnish, the checkering remains clean with just light wear. The German silver forend tip, wedge escutcheons, sideplate, triggerguard, bolster inlay and butt inlay all show a lovely even patina. The ramrod has a slotted iron jag on one and is brass bound on the other. This is a really nice, completely honest Calhoun agent marked deringer that has a lovely appearance the wood to metal fit is perfect, the stock edges are crisp. This pistol was sold at Julia's in October of 2010 when it was part of the David Crocker Estate Collection. A cool Nashville Tennessee retailed deringer. (1C9752-4) {ANTIQUE} (2500/4000) Est. 2.500 - 4.000

8	Rare San Francisco Ågent Marked Henry Deringer Percussion Pistol .41 caliber, 3" barrel including breech with an oxidized bore that shows strong rifling. The top of the double German silver banded barrel is marked "W.C. ALLEN & CO. / SAN FRANCISCO" and the top of the breech is marked "DERINGER / PHILADELA". This pistol shows scroll engraving on the lockplate, hammer, tang and the German silver furniture. The lockplate is also marked "DERINGER / PHILADELA" and the pistol shows the latest style pineapple finial. The condition is nice with the barrel showing a pleasing smooth brown patina with all markings including the "P" proof on top left flat remain crisp and legible. The lock is similar in color and again very smooth, the metal surface in general are free of pitting even within the bolster immediately around the nipple. The one-piece walnut stock rates very good with about 75% original finish remaining and the checkering remains strong with a couple dings within. W.C. Allen was a watch, diamond and jewelry in San Francisco between 1853 and 1870. Their period advertisements also list "Derringer" pistols and a general assortment of fancy goods. This particular Deringer is illustrated in Eberharts The Deringer in America Volume II on page 218 when it was part of the John G. Hamilton collection. A very rare Deringer pistol sold in San Francisco during the waning days of the California Gold Rush. (1C9762-2) {ANTIQUE} (3000/5000)
	Est. 3,000 - 5,000
9	Rare E. Schmidt & Co. Houston Texas Percussion Deringer .45 caliber, 2 1/2" barrel including breech and showing an oxidized bore. This deringer is marked on the top of the barrel "E. SCHMIDT & CO. HOUSTON." with the lock being plain and unmarked. This deringer feature gold band at muzzle and double gold bands at breech and is otherwise unembellished as all known examples of these pistols are. The iron surfaces are all a pleasing smooth gray brown patina with just a very small amount of fine pitting near bolster. The German silver furniture is all simple in form and all fits beautifully and has a pleasing patina. The checkered walnut stock rates very good with about 75% original finish remaining and with strong checkering which shows just light wear. The pistol shows a small German silver dovetail mounted blade front sight and simple rear mounted at the junction of the tang and breechplug. Comparing this pistol to the known examples in The Deringer in America, all furniture and markings are correct and the condition and wood to metal fit is better on this example than those shown in the book. E. Schmidt and Company was active in Houston during the 1860s and made deringer pistols along with percussion plains rifles. This is a very rare and desirable Texas made deringer. (1D9762-6) {ANTIQUE} (30005000)
	Est. 3,000 - 5,000
0	Excellent Colt Model 1903 Pocket Hammer Semi-Auto Pistol serial #43836, 38 ACP, 4 1/2" barrel with a bright about excellent bore which shows only some very minor frosting within the grooves. This is a lovely auto pistol, retaining about 97-98% original blue, the loss being only some very light wear near the muzzle, a bit of sharp edge wear at the butt and a minor handling mark or two, the hammer screw showing some light circumferential scratches around it. There are a few very sparsely scattered very light freckles of surface oxidation here or there, but they are unobtrusive. The hammer retains virtually all of its original vibrant color case-hardening and the bright polished portions of the barrel remain brilliant at the muzzle and ejection port, with a few tiny spots of light oxidation staining. The checkered hard rubber Rampant Colt grips rate excellent and one all blued magazine is included marked "Cal. 38/Colt" on its base. The rear sight shows a small ding on its right side, an issue that would not even be worthy of mention were it not for the fine condition of this pistol. The arm seems to function well mechanically and would be a welcome addition to any Colt auto pistol collection. (3B9908-21) {C&R} (2500/4000) Est. 2,500 - 4,000

## Lot Title/Description

61

Fine German Percussion Halfstock Sporting Rifle by Kuchenreuter .54 cal, 27" octagon barrel with a mostly bright very fine bore which shows some minor oxidation or light frosting, primarily within the grooves. This is a fairly fancy and very well-made rifle from this famous maker. The barrel shows a deep relief wootz-damascus pattern its full-length which continues onto the under rib and the ramrod thimbles and is an overall pleasing pewter-gunmetal patina. The rifle is sighted with a simple bead front sight atop a plain sporting ramp with a very scant u-notch rear which is adjustable for elevation via a small spanner nut, with a neatly chiseled and engraved front extension. The left and right diagonal flats near the breech show open loose relief scroll inlaid in silver with a small geometric decoration by the sunken silver "JAK" touch mark, all of this surrounding "J Adam Kuchenreuter in Regensburg" inlaid in gold. The lock is stepped at its rear with a small floral decoration there and wide open flowing foliate scroll on the front portion and side of hammer, a recumbent stag in a forested scene to the rear of the hammer. The hammer nose is lightly engraved in a dragon-style motif and the bolster and breech show the same open wide quality scroll which continues onto the tang. The tang itself shows an unengraved silver monogram plate with light borderline engraving and an original fold-down aperture sight, adjustable for both windage and elevation with the screws affixed to the sight. The metal surfaces are all primarily a pleasing smooth pewter gunmetal patina, the tailpipe with a bit of engraving, the front extension, tang extension, scrolling sideplate and bow of the guard all engraved similarly, the bow with a small reclining stag and a nice finger spur on its rear edge. The European walnut stock rates very good with the expected overall dings and handling marks one finds on a hunted arm. It features a horn forend tip. carved grip flourish to the rear of the guard and a very generous flared left side shadowline cheekpiece. The grip shows coarse checkering which is somewhat worn and filled now from the years, with fleur-de-lis in-carving and scroll accents. There is a wooden sliding door patchbox with push-button release, there are a number of chips, flakes and dents surrounding from folks over the years who obviously had no clue it was a push-button release and attempted to pry it open. The lock is dual-acting with a pivoting safety rest and the gun is equipped with double set triggers; they are somewhat sluggish and no doubt need cleaning as they do not currently set, but the lock functions well mechanically, and what is likely the original ramrod is included. A very handsome rifle from this famous German maker that obviously was ordered by a man of means and used afield, but which was cared for. (3B9670-305) {ANTIQUE} [David & Lore Squier Collection] (2000/3000) Est. 2.000 - 3.000

Lot Title/Description

Extremely Rare and Desirable 2-Digit U.S. Model 1911 Colt Pistol serial #38, 45 ACP, 5" barrel showing a very fine bore with strong evident rifling with minor frosting scattered in the grooves, more prominent nearer the throat, the barrel marked only with small "P" firing proof and inspectors number "5" on the barrel radius ahead of the lugs. An impressive arm given its age and serial number, the pistol was clearly issued and used by someone during its life. The slide retains strong markings and perhaps 15% original blue, the balance toned to a deep gray-blue faded original blue, with toning to pewter and wear to a silvery gunmetal on the sharp edges and contact points. It has light scattered oxidation staining and scattered light pitting and retains its tapered thin blade front sight and rounded u-notch rear; the scant u-notch rear shows a tiny ding on the left edge of the aperture making it appear a bit wide. The extractor shows some remnants of pale fire blue on its exposed portion and the slide shows random dings or handling marks here and there. The frame retains perhaps 20% original fading blue with strong property marking, inspectors marking and serial number stampings. It has toned to a silvery and gray patina on the straps and on the sharp edges and contact points, with a bit of scattered oxidation staining here and there and some scattered light pinprick pitting. Both the first style hammer and trigger show strong original pale fire blue with operational wear, primarily on their right sides; the safety as well shows some strong trace blue at the root of the checkered thumbpiece. The grips rate good showing quite a bit of wear to the checkering along their lower sections, the left grip worn nearly smooth around the lower diamond, the right showing a bit of wear as well, but they are early style with the correct 15-row diamond count between the larger diamonds, the stock screws are the original thin head with shallow screwdriver cuts. The barrel bushing has the correct beveled edges and shows some nice pale fire blue while the recoil spring plug shows some nice blue around its periphery below the checkering, it is correct early style without punched recoil spring-captivating detent, the recoil spring guide as well is the early "old style" with squarish front edge and sharp corners at the legs which ride beneath the barrel itself. It appears as though the slide stop is likely a later replacement as the checkering is horizontal rather than "diagonally diamond-shaped" as we see on serial #39 (published in Clawson's book on the subject), the magazine release catch as well is slotted rather than the early concave dished style; Cylinder and Slide Inc. has early style magazine catch retainers available if one wished to replace the current one in the gun with a correct-style and have it properly fire blued (the magazine catch may be an older replacement as well as there are no vestiges of fire blue and the frame is a bit dinged up in the area surrounding it). Included is a two-tone lanvard-based magazine with a riveted base plate of the "new type" having the rivets nearly flush with the bottom edges of the magazine body. The magazine shows a two-tone pale gray upper section with fading blue and flaking brown on its lower portion with a couple small dings and some light pitting at upper left. Included with the gun is a copy of the Collectors Guide to Colt 45 Service Pistols © Clawson 1998. The small-sized 130 page "enlarged and revised edition" is in very good condition with some light staining and soiling to the covers, with this guns sister pistol, serial number 39, on the rear cover of the book. The first fifty of these iconic Colt pistols are extremely desirable arms and nearly never come up for public offer. This example is honest and clearly has not been messed with or adulterated over the years, having only a few normal replacement parts that one would expect from an issued arm. Serial numbers 1-44 were assembled at Colt December 28, 1911 and serial numbers 1-50 of these first-shipment 1911 pistols all went to the Commanding Officer, Springfield Armory on January 4, 1912. A very respectable example of these iconic 1911 pistols that was miraculously issued and clearly carried by some individual, most likely during both of our World Wars. Lot Title/Description

Fine French Over Under Percussion Double Rifle by Caron of Paris .60 cal, 22 3/4" octagon barrels with bright about excellent bores which show some minor scattered oxidation here and there. The barrels on this lovely rifle show a nice contrasting brown and pewter damascus pattern their full length, with a few spots of very light oxidation staining sparsely scattered here and there, which are mostly unobtrusive due to the wonderful color on the barrels. Top flat is engraved with the makers name "Caron" in an old English monogram style, and engraved in fancy script after is "á Paris Arq. De S. M. l'Empereur". The barrel frame and back action locks are a silvery pewter patina, likely finished bright when new, as no remnants of color case-hardening remain, they show a bit of light oxidation in the area below the nipples. They are over all engraved in excellent quality open flowing foliate scroll with the finest satin background stippling accenting the work. Each back action lockplate is marked in relief around the hammer "Caron a Paris". The very French, forward curving swirl triggerguard, and long tang show a freckling of soft brown patina, with the same nice quality foliate engraving seen on the lockplates, the bow of the guard with a coat of arms. The arms has a circular clan badge-style belt in-which is written "SPERNO", this circling a field of three knight helms, surmounted by a torse of color from-which emanates gauntleted hand holding a snake by the neck. The arm is stocked in a lovely grade French walnut showing some stunning grain figure, much original varnish and the expected light handling marks that come from a field-used arm. The wraparound checkering pattern is flawlessly executed and features mullered borders and there is a silver shield-shaped monogram plate atop the wrist which appears to be engraved "TES". The smooth iron buttplate shows the same excellent quality engraving along its tang, it gives a 14" length of pull to the front trigger and the arm is fitted with sling swivels. There are some drying checks in the highly figured wood but they are unobtrusive and a silver oval monogram plate along the toeline is neatly engraved "4". The arm is sighted with a simple silver bead front sight and two leaf v-notch rear, one standing, one folding, and what is likely the original iron ramrod is captivated in the left side thimbles. The hammers are in time and locks function well mechanically and are covered by a very neat leather action cover, likely made for the arm as it fits precisely, marked "Dubois a Paris". Stockel lists E P Caron of Paris as the arquebusier to Emperor Napoleon III, in the period 1852-70. A very lovely, and no doubt still usable, over under double rifle of high quality make. (3C9670-46) {ANTIQUE} [David & Lore Squier Collection] (3000/5000) Est. 3,000 - 5,000

Exquisite German Percussion Double Fowler by Bössel	I
About 12 ga., 32 1/2" barrels with fine bores which show some sparsely	I
scattered very light oxidation and perhaps some light pinprick pitting.	I
Externally the barrels are very nice and show a very fine textured	I
damascus pattern on both barrels and ribs, their full length, with a few	I
very light handling marks near the muzzles. Sighted with a simple silver	I
bead front sight, the rib is marked "Lorenz Bössel in Suhl" inlaid in gold,	I
surrounded by silver inlay foliate scroll of excellent quality; there are dual	I
	I
inlaid silver bands at the breeches. The breeches themselves shows	I
some strong remnants of color case-hardening with very light borderline	I
engraving and small gold inlaid floral petals at the blowout plugs, with an	I
auerhahn perched in a tree, inlaid in gold, on the rib extension between.	I
The long tang as well is quite fancy with open rococo scroll engraving	I
with a gold inlaid game dog, which seems to be bellowing at the	I
aforementioned auerhahn above him, with many of the small scrolls or	I
floral petals having small gold accents. The back action lockplates and	I
hammers are a pleasing pewter gray patina and show the same open	I
rococo and foliate scroll with game birds right and a fox with hare left.	I
They show the same lovely little tiny gold inlaid accents, continuing onto	I
the hammers which are dolphin nosed, each with gold eyes. The arm	I
features German silver furniture with two plain German silver ramrod	I
thimbles, a long rear tang tailpipe with finial extension and lovely	I
engraving, a mirror image of this on the front extension of the	I
triggerguard. The triggerguard itself shows small scrolled accents with a	I
rear pistolgrip, the bow showing an engraved hunter taking aim at game,	I
the long tang of the German silver buttplate embellished with lovely	I
scroll. The arm is stocked in a nice grade of what is likely French walnut,	I
the stock rating very fine with much original varnish and the overall	I
5,	I
expected dings and handling marks that come from the hunted arm. It	I
features a very generous flared left side cheekpiece with a concave	I
overhang and tiny carved border on its edge, a portion of which has	I
chipped away along its rear. There are checkered panels at the grip and	I
forestock flanked with lovely open flowing carved scroll and floral	I
accents of the finest quality. To the rear of the cheek rest we find a	I
beautiful relief-carved game scene showing a dead fox hanging from a	I
tree with hounds inspecting him, each having an inset silver collar, this	I
all flanked by foliate and scroll relief carving. The locks are crisp and	I
mechanically functional and are equipped with the automatic hammer	I
stop rests which protrude from the lockplate when the hammers are	I
withdrawn to the rest position, before the half-cock notch, with them	I
drawing back to the interior of the lockplate when the hammers are	I
brought to the full-cock position. The length of pull is 13 3/4" and what is	
likely the original ramrod is present. An extremely lovely German double	
fowler that would be a welcomed addition to any collection of highly	
embellished German arms. (3D9670-311) {ANTIQUE} [David & Lore

## Lot Title/Description

Lot Title/Description

65 Wonderful Cased German Percussion Target Pistol by G. Wigand of Frfurt .39 caliber, 9" octagon barrel with a bright excellent bore. This pistol has lovely form and is beautifully embellished with engraving, gold and silver inlay and stock carving. The top of the barrel is engraved and inlaid in gold "G. WIGAND ERFURT" and shows silver inlaid bands and very fine geometric patterns at the muzzle and breech. The barrel breech and tang show relief floral scroll with gold inlaid coat of arms depicting an arm with sword at center and a trident at the top. There is also a shell type motif gold inlaid just ahead of the adjustable rear sight. The continental style humpback lock with recessed rear is engraved in lovely relief floral scroll with a recumbent lion inlaid in gold with a tropical background with palm trees. The hammer is engraved with a dragon-like creature engraved on the nose with gold inlaid eyes. The triggerguard has a finger spur and houses an adjustable set trigger, the outer bow of the triggerguard is engraved with a gold inlaid jaeger. The condition of the pistol is fabulous with the barrel retaining 95% bright original blue finish with just a few small scattered patches of light surface oxidation staining. The balance of the metal surfaces are finished in a French grey which remains excellent, smooth and even overall. The stock is of beautifully figured walnut which shows handsome darker striped grain. The grip features superbly executed relief floral scroll carving with a stylized animal face within each panel. The butt is carved in the same lovely fashion with a crosshatched geometric medallion at center. The tip of the forend shows more of this lovely treatment. The condition of the stock is excellent with 97% original finish remaining and with all carving sharp and finely detailed. The pistol comes in a period French fitted oak casing with a copper flask, powder measure, nipple wrench, sight key, ramrod, along with pewter oiler and brass cap tin; there are two other covered compartments. The case is lined in green felt and rates very good plus on the interior and about the same on the exterior with 95% original finish remaining and with a stable crack across the lid and two across the bottom. There is some ink writing on the lid which is difficult to decipher, our best guess is "Bahn / Breitling / Eppstr 18". A simply wonderful piece 19th century German artistry in arms. (1D9670-449) {ANTIQUE} [David & Lore Squier Collection] (2500/4500) Est. 2,500 - 4,500 66 Ornate Austrian Flintlock Fowler by Joseph Fruewurth About 28 bore, 37" part octagon part round barrel with a very good bore which is mostly bright but shows a bit of light surface oxidation. Really an exquisite arm in its day, this single barrel fowler remains very attractive and ornate. The barrel is an overall tarnished pewter and deeper blue-gray patina. It has a simple silver blade front sight with four-legged silver inlay flanking, the barrel shows a nice dual medial ring with chiseled engraving at the point of transition and shows 11 impressed touch marks at the breech, nine are fleur-de-lis, two are makers marks. The lockplate features a nice beveled edge and small teat at its rear with a faceted pan and unbridled frizzen. It shows nice loose open flowing scroll and is maker marked "Ios Fruewurth/in Weinn" on the plate, the frizzen spring neatly chiseled with a flared tail. The graceful swan neck cock has some light engraving on its face and the frizzen appears to be resurfaced from the period of use. The half stock shows a nicely engraved brass nosecap, faceted thimble, engraved and chiseled tailpipe and a fancy engraved and chiseled front extension ahead of the triggerguard band, which supports the wooden guard itself, and bolsters it from damage. The forestock area shows a nice pierced and engraved capucine, with the rounded brass buttplate showing a rococo engraved tang. The monogram plate atop the wrist shows rococo scroll surmounted by a crown with the initials "MA" engraved within. The halfstock itself rates very fine with the expected dings and handling marks from the years, small cracks left and right at the tip where the sling swivel is located. There are nice ribs carved left and right of the ramrod channel, some open flowing scroll in the forestock and surrounding the front extension, with nice scroll left and right of the wrist and at the rear of the square-bottomed cheekpiece. The tang as well shows some open scroll and scallop carving and there is a sling stud along the toeline. The lock seems to function well mechanically and what is likely the original ramrod is present. A lovely and very ornate single barrel flinter, doubtless made for nobility by the wrist escutcheon, Fruewirth being a court rifle maker and rifle repairer in the 1750s. A bit of research may uncover the identity of "MA". (39670-309) {ANTIQUE} [David & Lore Squier Collection] (2000/4000) Est. 2,000 - 4,000

Fabulous Remington Model 1875 Single Action Army Revolver
serial #11243, 44-40, 7 1/2" barrel with an excellent bore. This revolver
remains in extremely fine original condition. The barrel bears the proper
"E. REMINGTON & SONS ILION, NY. U.S.A." and the revolver shows
no other external markings. The metal surfaces retain about 98%
original nickel finish overall which remains quite bright. There are some
very light normal abrasions in the finish and a couple scratches on the
left side of frame emanating from one of the screws. The hammer shows
perhaps 95% or its original color case-hardened finish which is just
slightly toned and has a wonderful appearance. The two-piece walnut
grips rate near excellent with a good deal of original finish remaining and
with just very light handling marks. This is a very fine and completely
honest 1875 revolver. (1B9362-19) {ANTIQUE} [Edward W. Marron, Jr.
Collection] (4000/6000)
Est. 4,000 - 6,000
Very Fine Remington Model 1890 Single Action Army Revolver
serial #1908, 44-40, 5 3/4" barrel with a mostly bright very good plus
bore showing a few small areas of pinprick pitting and strong rifling
throughout. The metal surfaces of this attractive revolver retain about 94-95% original nickel finish with most of the loss due to some very fine
- · · ·
flaking toning to a mild gray-brown patina along the ejector rod housing, sides of the frame and hammer, along with a few light dings on the
frontstrap and some other scattered light handling marks. A few of the
screw heads show some light slot wear, the grip screw retains some
nice fire blue and the Remington Arms Co. address remains crisp and
clear as does the "44.C.F.W" marking on the left side frame. The black
checkered hard rubber grips with RAC monograms are pencil-numbered
to the gun and remain in near excellent condition showing some minor
smoothing around the edges, a few light scratches and toning to pale
brown patina. The bottom of the left panel is lightly scratched with the
name "MAX" and with a small "A" below the monogram. The lanyard
ring is intact, the triggerguard and loading gate are matching the frame,
the remaining parts are un-numbered and the action seems to function
well mechanically with excellent timing and lock-up showing a hint of
play. A lovely example of these very desirable Remington revolvers.

This lovely rifle features matching numbers on the barrel, frame, and end-grains of both the buttstock and the forend as well as the inside surface of the buttplate. This rifle features wedges of beautifully executed scroll engraving on the action, triggerguard, barrel breech and forend tip. All screwheads and pins are engraved including the buttplate screws, the smooth steel shotgun buttplate is not engraved. The barrel shows the six-line patent dates on the top flat ahead of breech, presumably to give the engraver more of a blank canvas on the action. The barrel has been nicely reblued long ago with neatly filled holes, one through the patent dates and the other further forward on the octagonal section. There is also a dovetail cut through the barrel address after the "E" in the "E. REMINGTON & SONS" address with the first few letters in "Remington" being no longer visible. The color and style of the finish is excellent, the finish is old and passes muster upon first glance. The bottom of the barrel beneath the forearm is marked "T P & B PG ENG". The barrel shows about 90% of this quality blue with areas of thinning and loss taking on a pleasing brown patina. The action shows perhaps 70% original color case-hardened finish which has faded to a pleasing smooth mottled pewter gray. The metal remains smooth and the engraving remains crisp. The rifle features its original factory single set trigger. The checkered pistolgrip buttstock and smooth iron tipped forend rate very good appearing to

	behind the hammer and "U.S. / SPRINGFIELD" ahead of the primer			
	door. The top of the breech displays "1864" which is slightly obscured			
	along the bottom from cleaning while the left flat of the barrel is marked			
	"A (star)" and the left quarter flat bears a "V / P / (eagle head)" proof			
	mark. The smooth black walnut stock rates good to perhaps very good			
	as lightly cleaned with a light coat of period added finish along with a			
	3/4" chip behind the rear lockplate screw, a lengthy scratch on the right			
	side of the buttstock and on the left stock flat, and the scattered minor			
	handling marks to be expected of an issued Civil War arm. The left stock			
	flat bears the remnants of a few cartouches, the original cupped			
	tulip-head ramrod with swelled shank and the sling swivels are intact,			
	the barrel is sighted with a blade front and Model 1861 rear and the			
	Maynard Tape-Primer mechanism appears to function well			
	mechanically. The action remains very strong and crisp on this very			
	good Model 1855 rifle-musket which is historically significant for being			
	the first U.S. service rifle to fire the Minié ball. (23A9833-47) {ANTIQUE}

		-		.36 caliber, 5 1/2" barrels with flat ribs and very good lightly oxidized
				bores. This bar hammer pepperbox features the dog leg grips with oval
				inlay and spurless triggerguard. The hammer is marked on right side
				"J.G. BOLEN N.Y." while the left side is marked "BOLEN 104 B'WAY
				N.Y. / ALLEN'S PATENT". Two barrel ribs are engraved with "J.G.
				BOLEN" and "BOLEN 104 B'WAY N.Y.", another is marked
				"PATENTED 1837 CAST-STEEL". The frame shows beautiful original
				scroll engraving with the nipple shields showing nice floral etch. The
				etching and engraving both remain very sharp and crisp. The barrel
				cluster shows about 60% original blue with some surface oxidation and oxidation staining present, a meticulous cleaning may enhance their
				already nice appearance. The frame and nipple shield retain perhaps
				20% original blue with the balance flaked and the exposed surfaces
				bearing a pleasing smooth gray brown patina which remains smooth and
				free of pitting. The sole frame screw shows slight slot wear which could
				likely be easily dressed. All markings remain clear and legible except for
				those that were somewhat poorly struck, no markings are diminished by
				the condition of the gun. The walnut bag shaped grips rate about
				excellent with 90% original finish overall. The original mahogany case is
				very fine with red baize lining. The interior of the lid bears a beautiful
				blue Bolen retailer label "BOLEN'S / LIFE AND PROPERTY
				PRESERVERS / Important to Travellers and Housekeepers" There is a
				full description of how the gun functions and its capabilities beneath the
				title "The last and greatest Imporement in / Fire-Arms!". Also included in
				the case is a small advertising card for Bolen and a hand written piece
				of paper which reads in ink "Volver-Pills". The accessories include a nice
				brass powder flask with plunger top, a two-cavity conical and round
				bullet mould, brass ram and cleaning rods, a cap tin and cast projectiles. The interior of the case is very good with some wear to the lining and
				some partitions partially loose but the lining remains intact, the exterior
				is excellent. A very fine cased Bolen retailed Allen Pepperbox with
				period and very endearing advertising. (1B9670-427) {ANTIQUE} [David

patent for over 68 pounds Sterling, nearly double the price of his most valuable invention. This is a wonderful double gun built by one of England's most respected gun makers and designers and owned by one of America's most successful entrepreneurs and pioneer of modern photography. A truly investment grade, best quality London double. (1G9670-461) {C&R} [David & Lore Squier Collection] (10,000/15,000) Est. 10,000 - 15,000

Very Fine Frederick Beesley Sidelock Double Ejectorgun of George Eastman founder of Eastman Kodak Corporation serial #1680, 16 ga., 27" barrels with bright excellent bores. The barrels are London nitro proofed for 1 oz loads and chambers remain at 2 1/2" in length. The barrels are jug choked with the left opening from .675" to .690" then back to .675 and the right opening from .672 to .677" and then back to .674". Through a telephone conversation with London Gun Company who build the modern day Beesley guns and who hold the original records, this gun was built as a best quality 16 bore gun with 29" Whitworth steel barrels. The gun was sold to a G.W.A. Lloyd on December 4, 1899. In 1900 the gun was returned to Beesley by Mr. Eastman and the barrels were shortened to 27" at that time. The shotgun features full coverage rose and scroll engraving on the action and locks with each lock being engraved "BEESLEY LONDON / PATENT" in riband. The belly of the action is also engraved "BEESLEY PATENT" and the top lever is again engraved "PATENT". The fences show Beesley's deep relief stylized acanthus leaf engraving and the top tang shows the word "SAFE" inlaid in gold. The barrels show wedges of fine scroll at breech with each barrel being engraved on top "WHITWORTH'S FLUID PRESSED STEEL" with the rib being engraved "F. BEESLEY 2 ST. JAMES STREET LONDON PALL MALL CORNER". The condition of the gun is wonderful with the barrel retaining about 90% evenly thinning original blue which is beginning to blend with a pleasing smooth brown. There is one area on right side of right barrel just ahead of the forend along with a few areas on the left barrel that show some light oxidation staining, there does not appear to be any pitting. The action and locks show over 95% bright original color case-hardened finish, all screw slots are clean and properly indexed. The triggerguard retains 95% original blue with just the tiniest bit of thinning on the tang. The highly figured English walnut stocks feature a flat top checkered wrist and forend and remain in fabulous original condition with an oval silver monogram plate in the toeline which is engraved "GE". The stocks show nearly all of their original hand rubbed oil finish with absolutely perfect fit, extremely crisp edges and dropper points. It doesn't look like a turnscrew has touched this gun since it left London. The gun features double triggers, automatic safety, ejectors, and a straight grip stock with checkered butt. The gun has a 13 7/8" length of pull to the checkered butt and shows drops of 1 5/8" and 2 5/8". The gun weighs in at only 5 1/2 lbs. and shows minimum wall thicknesses of .025" right and there is one area in the left tube of .020" 17" from the breech. The gun remains tight, on-face and the ejectors are in time. The shotgun comes in its original red baize lined oak and leather case with brass reinforced corners. The original Beesley label listing the serial number and load data is present on interior of lid, it also bears Eastman's signature in ink "Geo. Eastman / Rochester, NY". Eastman's signature was distinctive and this is no doubt written by his hand. The condition of the case is excellent with the barrel recess having a red lined block added to fill the 2" gap after alteration. The included accessories are a rosewood cleaning rod with associated implements, two horn handled Hawksley marked turnscrews, a broken shell extractor, snap caps and a nickel oiler. There is a foil tube of lubricant which is embossed around its top "EASTMAN KODAK COMPANY / ROCHESTER, N.Y.". George Eastman was born on July 12, 1854 in Waterville, NY. and the family moved to Rochester in 1860 where his father had started a business school called Eastman Commercial College in the early 1840's. George was educated in private schools and left school at the age of fifteen after his father's death to help support the family. In 1884 George Eastman patented the first camera film in roll form and developed the Kodak camera, Kodak being a word Eastman created. In 1889 he first offered film stock for sale for use in other cameras and by 1896 was the leading provider of film stock in the world. He never married, was very close to his mother whom he tried for years to repay for her love and dedication. She was reluctant to accept his gifts and after his death he built the Eastman Theatre which housed the Kilbourn Theatre (his mother's maiden name) which was dedicated to her memory. He was a tremendous philanthropist and proponent of education donating more than \$100 million during his lifetime to various institutions and organizations including MIT, RIT, the Tuskegee Institute in Alabama and the Hampton Institute in Virginia. He also donated money to build a dental school in London which is now part of the University College in London. Eastman suffered from degenerative spinal disease and spent his last years in great pain. On March 14, 1932 at the age of 77, Eastman succumbed to the pain, shooting himself through the chest leaving a note behind which read "To my friends: my work is done. Why wait? G.E." He had a storied and extremely successful career and upon his death his entire estate was bequeathed to the University of Rochester. Beesley was similarly prolific in his own field of work filing over 25 patents during his career and being dubbed the "Inventor to the London gun trade". His most famous patent is the assisted opening system that he sold to Purdey in 1880 for the sum of 35 pounds sterling; Purdey uses his patented system to this day in building their double guns. As a comparison, this shotgun sold 20 years after the sale of that

Remington Model 1879 Argentine Artillery Rolling Block Carbine Formerly of the Remington Arms Co. Factory Collection 43 Spanish, 23 1/2" round barrel with octagonal breech and a bright excellent bore. The barrel of this handsome little carbine retains about 80-85% original blue thinning and toning overall to a pleasant deep plum-brown patina showing some scattered very fine faint scratches and light freckling. The action, barrel band and buttplate retain about 97% vibrant case-hardened colors showing some very mild muting along the tangs and heel of the buttplate along with some very sparsely scattered mild freckles and remnants of protective lacquer in the protected areas. The hammer, breechblock and small action parts are partially bright showing some scattered gray freckling and the tang address and patent dates and Argentine model designation atop the breech remain intact and strong. The smooth walnut stocks remain in very fine condition retaining much of their original oil finish with a few scattered light dings and handling marks. The left side butt is stamped with a small "46" and it retains the original Remington factory collection brass tag numbered "33". The carbine is equipped sling swivels, military sights and long right side saber bayonet lug and the action seems to function well mechanically. Issued carbines generally saw very hard use and this remains a very fine example as-retained by Remington. (13C9670-193) {ANTIQUE} [David & Lore Squier Collection] (2000/3000) Est. 2.000 - 3.000

Lot Title/Description

98 Extremely Rare and Important Confederate Artillery-Size Drum Captured by the 13th Regiment Connecticut Volunteers at The Battle Of Irish Bend

Recently deaccessioned from the collection of the New Britain Youth Museum of New Britain Connecticut, this bass-size drum has been their property and in their possession since the mid-1950s. While the name of the benefactor has sadly been lost to the years, the drum has been in storage as it did not fit with the current mission of the museum and like so many important institutions these days, working and developmental capital was a priority over artifacts which would likely never see public exhibition. The drum is as honest as they come and shows a wonderful uncleaned oxidized patina from the years with ingrained dust in the protected areas from its long stint in the store room. Each of the hoops shows strong remnants of a red-burgundy milk paint, the top hoop with numerous chips and flakes along its edge, starting to warp slightly from the years. The shell may be ash or some sort of yellow southern pine and shows a very pleasing ochre tinge to what appears to have been white or buff-colored wash or paint, the dark mahogany-toned wood beneath evident in the numerous small flaked areas. What appears to be antique replacement rope and four original tugs are present, drying and very brittle from the years showing remnants of a buff colored paint or die, the replacement tugs each also showing minor drying and flaking; there is a tiny strand of original rope present beneath the top hoop. On the body of the drum can be seen a hand-painted crossed panoply of two Confederate states "First Flag", stars and bars, with a count of 12 stars, the paint has faded a bit and flaked somewhat from the years, and the circle of stars can actually be counted on the right flag, one cannot get an accurate count of the original stars painted on the blue field of the left flag due to flaking and fading. There appears to have been some manner of decoration beneath the panoply but it is sadly lost to the years and fading. The top and bottom heads are both a deep coffee-tobacco colored patina, the top head more of a buff color at the worn center section where stick impact would have been. Each of the heads has been very neatly painted with a commemoration of the date and place of capture, the bottom head the most illustrative "Captured From The Enemy/At Irish Band LA/April 14, 1863", this was the date that the 13th Connecticut Regiment, along with elements of 25th Connecticut and 159th New York, was engaged with the 1st Louisiana Field Battery, the "St. Mary's Cannoneers", among other units. The details of the battle are scrupulously written down in numerous reports on the subject and very nearly precisely match the paragraph on the bottom head of the drum "Taken Together with a Gun and Caisson, Two Officers Horses, a Battery, Flag and a Young Brown Bear, Two Years Mascotte of the Regiment". The volume History of the 13th Infantry Regiment of Connecticut Volunteers During the Great Rebellion details the very day in-which the 13th Connecticut engaged the Louisiana men, the 13th utilizing a firing and loading on-the-march technique ("this mode of firing--firing while advancing in line of battle--is not laid down in the tactics" the narrative reads). The volume detailing reports from onlookers: "When the 13th commenced firing it didn't sound like the other regiments, but there was a steady roll without any break in the sound for near ten minutes .... That rebel battery ceased firing mighty guick". Lieut. Leonidas Hall of the 1st Louisiana guoted "I never heard such firing ..... It seemed like a never ending peal of rolling thunder, I knew something had to give way in front of the 13th, for no troops that ever breathed could stand such a fire as that". The same narrative in that same volume details the retreat of the St. Mary's Cannoneers, and the capture of "two caissons, one limber, four artillerv horses, many swords, muskets, a great quantity of ammunition, 60 prisoners and a large and elegantly embroidered silk flag", that flag made by the ladies of Franklin Louisiana for the St. Mary's Cannoneers was in the archives of the State of Connecticut for years, eventually being repatriated to Louisiana. The drum itself measures about 28 3/4" in diameter and is roughly 20" tall hoop-to-hoop, and has a braided carry rope, no doubt done at the time it was re-strung. Additionally there is a small iron eyeloop with an iron suspension or carry ring affixed at the center of the body with a leather flange, perhaps to suspend the drum post-war in some GAR Hall or other important gathering area of the 13th Connecticut volunteers. No label can be seen through the vent hole, although there appears to be the vestiges of where a label was once attached on the inside of the body, it can barely be discerned with an illuminated borescope. While the 13th is not mentioned anywhere on the drum, there is absolutely no doubt they were the only Connecticut Regiment to capture the aforementioned gun, caisson, officers and horses as well as the flag at the Battle of Irish Bend, the drum being donated to a Connecticut Museum supports this inevitable conclusion. An absolutely wonderful Confederate drum, captured by these valiant Connecticut Sons of New England whose field tactics gave them the advantage that day, as well as the admiration of officers of other regiments who heard their performance during the battle din. Note that the due to fragility and the size, extra shipping will apply on this item. A museum grade American treasure from that great conflict. (3E9718-1)

(15,000/25,000) Est. 15,000 - 25,000 Lot Title/Description

Rare Remington Argentine Contract Prototype Rolling Block Rifle aa Formerly of the Remington Arms Co. Factory Collection 50-70, 36" round barrel with octagonal breech and a bright near excellent bore showing a hint of minor frosting in the grooves with otherwise strong rifling. The barrel of this lovely rifle retains about 96-97% original blue showing some mild thinning to pewter patina around the muzzle, a few scattered tiny dings and errant freckles. The action, barrel bands and nosecap retain strong case-hardened colors throughout, perhaps 80%, particularly vibrant along the right side action and more protected areas with overall toning to a pleasant pale gray case-hardened patina with the bow of the guard and left edge of the action toning to a mild brown patina. The hammer, breechblock and action pins retain about 98% original blue showing some mild high edge wear, the buttplate retaining about 90% original blue with overall mild thinning and the pin retainer and rear sight spring retain much of their lovely fire blue. The Remington address and patent dates along the upper tang remain intact and crisp and the barrel bands are marked with the familiar "U" stamps. The smooth walnut stocks remain in very fine condition retaining much of their original oil finish with the butt having darkened somewhat from the years and showing a very thin 1 1/2" sliver missing along the edge of the ramrod channel just behind the nosecap, a couple very thin drying cracks also behind the nosecap and otherwise just some sparsely scattered light dings and handling marks. Metal-to-wood fit remains excellent and the buttstock retains its original Remington factory brass tag numbered "141". The rifle is equipped with sling swivels, military sights, blue-finished cleaning rod and right side saber bayonet mount and the action seems to function well mechanically. A very handsome example for the Remington collector. (13C9670-244) {ANTIQUE} [David & Lore Squier Collection] (2000/3000) Est. 2.000 - 3.000 100 Colt Model 1849 Pocket Revolver Presented to George Dimick. 1st and 12th Vermont Infantry serial #206625, .31 cal, 4" octagon barrel with a very good bore which shows strong rifling and bright areas but with light oxidation and some scattered very light pitting. The barrel itself remains quite nice retaining perhaps 95% original blue, with wear to pewter on the sharp edges of the octagon and overall very light oxidation staining, the right side barrel lug showing numerous tiny impact marks in the area of the wedge. The loading lever retains some strong trace color case-hardening and the six shot cylinder has some trace original blue with a strong cylinder scene and four of the hammer rest pins remaining. The frame remains very pleasing with perhaps 80% original color case-hardening, primarily on the left frame flat, with a bit on the right as well, the hammer and trigger toned to a pewter patina. The triggerguard and backstrap remain very nice with perhaps 97% original silver plate, the backstrap with the period inscription "G.E.Dimick/From/Co.E 9th Regt. Vt. Vols.", clearly a gift to Capt. Dimick from admirers in the 9th Vermont infantry. The one piece walnut grip rates very fine with nearly all its original varnish and only light wear along the sharp edges and a few minor handling marks scattered about, it is numbered to the gun on the interior in antique ink pen. George Dimick did two tours, the first with the 1st Vermont Infantry, the second with the 12th. George Dimick of Woodstock Vermont enlisted in May 1861 and mustered into company B of the 1st Vermont Infantry, he was promoted to sergeant in June of that year. At the expiration of his three months, he waited nearly a year to re-enlist, this time as a Second Lieutenant into company B of the Vermont 12th Infantry. He was promoted to first Lieut in December of that year and Capt, in January 1863. It is interesting to note that the 9th Vermont mustered into service July 1862, and were later actually captured in September 1862 at Harpers Ferry. After being paroled they spent much of their time in Virginia and the war in the East, as did the 12th Vermont, it is highly likely that Mr. Dimick assisted or somehow met up with the 9th along the way. What he did to garner the admiration of Co. E and to earn such a nice gift is lost to history, but further research may be rewarding. All of the numbers on the arm are matching including the wedge and the gun functions very well mechanically. A modern image of Dimick is included with the arm in an antique tintype frame with pressed foliate scroll border in the back half of a book-type casing. The revolver itself remains in very nice condition overall and is a fine arm in its own right, the fact that it is identified to this interesting fellow from Woodstock Vermont who did his duty for his country twice makes it all-the-more desirable to the Colt or Civil War collector. (3C9827-2) {ANTIQUE} (3500/5000) Est. 3,500 - 5,000

## Lot Title/Description

101 Scarce Whitney-Remington Mexican Contract Rolling Block Rifle Formerly of the Remington Arms Co. Factory Collection serial #52372, 43 Spanish, 35" barrel with a mostly bright very good plus bore showing some scattered light pitting, mild frosting and strong rifling throughout. The barrel and action of this rifle retain about 90% factory restored rust blue showing some thinning and toning to mild gray-brown patina around the muzzle and high edges of the action, some scattered light dings and sparse remnants of smoothed-over light pitting along the action. The barrel bands have toned to a pewter-gray patina and the hammer, breechblock, action pins and split retainer plate remain bright. There is a small punch mark on the action pins, hammer and breechblock and the upper tang markings have been buffed out. The remaining markings are still quite strong and mostly intact with the top of the barrel shank stamped with a Mexican Phrygian cap emblem over "R.M.", the top of the action stamped with a large "8" and a slightly softened Phrygian cap over "R.M." on the right side action. The left edge of the action is also stamped with "11. 97.", perhaps an inventory date. The smooth walnut stocks remain in very good plus to about very fine condition retaining a healthy amount of oil finish with some scattered light dings and handling marks. The buttstock retains its original Remington factory brass tag numbered "828". The sling swivels, military sights and cleaning rod are intact and the action seems to function well mechanically. An interesting example of a seldom-seen Mexican contract arm evidently acquired by Remington, (13B9670-245) (ANTIQUE) [David & Lore Squier Collection] (1000/1500) Est. 1.000 - 1.500

Lot Title/Description

Fine Cased Pair of Inscribed Colt Model 1849 Pocket Percussion Revolvers serial #255057 & 256793, .31 cal, 6" octagon barrels with mostly bright very fine bores showing some scattered light oxidation and pinprick pitting, mostly nearer the breeches, with otherwise strong rifling throughout. This is a handsome pair of 1864-made revolvers with lovely period inscription along both backstraps "Capt Jno. F. Rodgers, U.S.A." The barrel of No. 255057 retains about 70-75% original bright blue showing overall flaking to a pleasant mild gray-brown patina, along with a few scattered light dings along the edges and right side around the wedge. The five-shot cylinder has mostly toned to pewter gunmetal patina showing a few mild brown freckles and strong flakes of original bright blue scattered about, the safety pins remain mostly intact and the stagecoach cylinder scene is completely intact and quite crisp. The frame and hammer retain about 90% vibrant case-hardened colors showing overall mild muting, a few tiny dings along the edges and some sparsely scattered very light oxidation staining. The left barrel locator pin has broken off and the loading lever has mostly toned to pewter patina showing some areas of mild oxidation staining and the plunger with strong case-hardened colors. The triggerguard and backstrap retain about 40% silver finish mostly around the guard, taking on a lovely dark tarnish with the balance toned to a pleasant ocher patina and the inscription remaining completely intact and strong. Some of the screw heads show some light slot wear and otherwise retain strong bright fire blue, the trigger and wedge also with fine fire blue. The New York barrel address and all of the other markings remain crisp and clear. The smooth walnut grip is ink-numbered to the gun and remains in very fine to near excellent condition retaining about 95% original varnish showing a tiny drying crack at the base of the right side and some scattered light dings. The arbor is un-numbered, the wedge is mismatched numbered "54948" and the remaining serialized parts are matching. The hand spring is either weak or broken but the action otherwise seems to function well mechanically when held down with solid timing and lock-up. The barrel of No. 256793 retains about 92% original bright blue showing some mild high edge wear, some sparsely scattered specks of light oxidation staining and a number of small dings on the right side near the wedge. The five-shot cylinder retains perhaps 20% original bright blue with the balance flaked to pewter gunmetal patina, the safety pins are mostly intact and the stagecoach cylinder scene is completely intact and quite crisp. The frame, hammer and loading lever retain about 92% lovely vibrant case-hardened colors showing some toning to pewter along the loading lever, a few mild freckles and handling marks along the frame. The left barrel locator pin has broken off into the barrel. The triggerguard and backstrap have mostly toned to a lovely dark ocher patina showing some mild tarnishing and remnants of dark silver finish around the triggerguard. The inscription remains completely intact and strong and the screw heads, trigger and wedge retain almost all of their brilliant fire blue. The New York barrel address and other markings remain crisp. The smooth walnut grip is ink-numbered to the gun and remains in near excellent condition retaining about 98% period reapplied antique varnish showing an expertly repaired small chip at the right edge and some other minor handling marks. All of the serialized parts are matching including the wedge and the action seems to function well mechanically with solid timing and lock-up. The revolvers are housed in a lovely period French-fitted mahogany case that rates very fine retaining much of its exterior varnish showing some mild staining and fine grain cracks along the lid, the base with a few moderate drying cracks and showing remnants of original green paper covering. The case is fitted with brass reinforcements along the corners of both the lid and base: the lock escutcheons and diamond inlay on the lid have been lost to the years. The interior is lined in a fine deep purple baize with dark green accenting, showing some light scuffs and a couple small detached areas. The case contains a number of fine original accessories including a partial japanned tin of Eley's caps with green label and Colt's callout, fire-blued nipple wrench that shows damage on one prong, dual cavity Colt's Patent bullet mould that retains about 90% original blue, showing some scattered moderate dings and crisp "31 PKT" stamp and patent markings and a fine Federal Eagle powder flask marked "COLTS PATENT" retaining strong original finish with some mild staining and tarnishing and the spring with strong fire blue. Research indicates these pistols were very likely presented to a Captain John Frederick Rodgers of Connecticut who was commissioned a Second Lieutenant into the U.S. Army Quartermaster's Department on July 21, 1862 and was promoted to Captain on July 28, 1866. He remained an army man for life, retiring January 13, 1894 and passing away on August 25, 1899. This is a very attractive pair of revolvers with a lovely period casing and inscription. Lot Title/Description

103 Johann Jacob Kuchenreuter Flintlock Sporting Pistol 105 Rare Early Cased Adams Patent 1851 Double Action Percussion 44 cal, 9 1/2" tapered round barrel with side flats and integral top rib Revolver by Tranter showing a mostly bright, very fine bore, with scant shallow rifling. This is serial #20254Y, .45 cal (50 bore), 6 5/8" octagon barrel with a good-very a very lovely and very ornate gun, which typifies the exquisite work this good bore showing some scattered light pitting and strong rifling family of gunmakers is known for. The barrel retains a lovely antique throughout. This is an early revolver made under license by William blue-gray, flaking to brown on the high and contact areas, with a simple Tranter with the particularly rare feature of a counter-clockwise rotating silver blade style front sight with inlaid legs across the surface of the cylinder. The metal surfaces have mostly toned to a mottled dark gray barrel, the rear sight is a dual square notch blade, one standing one patina with some scattered remnants of light pitting, more moderate folding, plated with gold, affixed to the tang. The makers name is in the along the cylinder, and some lighter handling marks here and there. The aforementioned integral barrel rib and there is open flowing chiseled metal surfaces are lightly embellished with a few foliate flourishes and all scroll to its rear with a small grotesque within, this ahead of the sunken of the markings are still clear. The topstrap is marked only "LONDON". impressed gold makers touch marks atop the barrel and the left and the right side frame with "ADAMS' PATENT" and the serial number, right diagonal flats. The early style lockplate has beveled edges with a "ADAMS / 1851 / PATENT" on the left side frame and clear London light step at its rear and features a nice faceted pan and unbridled proof marks. The checkered one-piece walnut grip is frizzen. The frizzen spring has lightly chiseled edges and tailpiece, the assembly-numbered to the frame and remains in very good plus lockplate itself with game scene engraving and light flowing scroll on the condition showing some small areas of compressed points, handling swan neck cock. All of the brass furniture features a gold wash or plate, marks and strong checkering overall. The revolver is equipped with a the ramrod thimbles faceted with engraved and chiseled tailpipe peg on the left side of the frame for Tranter's first model rammer and the action seems to function well mechanically with solid timing and lockup. extension. The fancy triggerguard has an urn and foliate front extension with a small grotesque and intertwining rococo scroll on the bow, it is The included mahogany case is guite nice showing some scattered light numbered "No. 53" on the triggerguard's tang. The dual lobed strapped dings and a small chip to one bottom corner. It is lined with green baize buttcap as well shows game scenes left and right with the same open and contains a number of attractive original accessories including: flowing chiseled rococo scroll which continues onto the cap of the butt. detachable Tranter-marked first model rammer, small James Dixon the fancy sideplate with a martial panoply and open rococo scroll as powder flask (its spring will require some mechanical attention), nipple well. The stock appears to be French walnut and rates very fine with a wrench with screw-in pick, unmarked oil pot, a brass-tipped rosewood bone forend tip showing a slight schnabel, with open flowing carved handle cleaning rod and perhaps rarest of all, a brass-handled dual rococo scroll in the forestock area and surrounding the tang and rear of cavity 50 boreconical bullet mould with Tranter patent stamp. There is each lockplate. All of the edges remain crisp and the arm appears to be also a spot in the case for holding paper cartridges. A fine example of a unmolested with original finish, a very small "3" on the right side of the desirable Adams revolvers with a host of early features and accessories. grip between the butt strap and fleur-de-lis scroll, at the rear of the (13B9686-5) {ANTIQUE} (2000/3500) lockplate. There is a fancy gold monogram plate affixed atop the wrist, Est. 2,000 - 3,500 106 Fabulous Pair Of Silver Mounted Prussian Martial Holster Pistols by chiseled in relief with the bust of some nobleman adorning it. The arm Johann Saps features its original horn-tipped ramrod and is equipped with a single set trigger, currently the lock will hold on its safety notch only and not at full About .60 cal., 12 1/4" barrels showing very lightly oxidized bores. This cock. The Kuchenreuters were Royal arms makers to the House of is a lovely set of uncut, completely original long-length horseman's Thurn and Taxis, this arm of sufficient quality to certainly have been holster pistols. The barrels are a very pleasing smooth pewter gunmetal made for nobility of that royal household. A beautifully executed German patina with German silver half-moon front sights, dual turned medials flintlock from the early-mid-18th-century. (3G9670-425) {ANTIQUE} about halfway down their length and small turned medials at the junction [David & Lore Squier Collection] (4000/6000) from round to octagonal. Each has a dovetail tang and are maker marked lightly on the top flat "Lazari Cominaz". Each of the toucholes is Est. 4,000 - 6,000 104 Fine Flintlock Sporting Carbine-Pistol by Kuchenreuter lined in gold and the arms, while showing evidence of use, were .62 cal, 7 1/2" round barrel with a bright about excellent deeply rifled extremely well-cared-for. The banana-shaped locks have beveled front bore. This is a very interesting pistol with a very interesting iron keyway edges, pronounced teat at the rear end, are convex, as-are the swan inset by the maker into the wrist of the stock which would accept a neck cocks. Each of the lockplates is marked along their lower beveled detachable buttstock, although in this case it is lost to the years. The edge "I.C. Saps" with "Berlin" hiding atop the bevel behind the frizzen barrel is lightly swamped and has an integral rib its full-length and shows spring. The unbridled frizzens are lightly sculpted and the frizzen spring exceptional wide flowing wootz-style damascus pattern with a nice silver is chiseled with foliate tail. There is a nice medial ridge beneath the blade front sight with chisel front extension. "Kuchenreuter" is inlaid in rounded pan and small chiseled ribs running around the circumference silver atop the rib and there are scant left and right bolster flats, the right of the lockplates and hammers. There are lovely faceted flared German showing a platinum vent liner. The tang is unadorned but has a simple silver ramrod thimbles with the triggerguard front extension chiseled and engraved with an urn and foliate motif with a small grotesque at its base, three leaf rear sight, one standing, two folding, all with shallow v-notches. The lockplate is lovely with beveled edges with a pronounced the bow lightly engraved, the rear extension faceted. Each of the rear extensions is engraved in turn "P/No./2". The silver dual-strapped step at the rear and a small teat. It remains very bright with its mirror-polished finish brilliant, the swan neck cock with dual rococo style buttcaps show light borderline engraving with a loose open scroll vertical bolsters front and rear, the waterproof pan culminating in a drapery and fabulous grotesques at the butt proper. The arms are bridled frizzen with fancy curlicue chiseled tail, the roller style spring stocked in European walnut which shows some lovely grain figure here neatly chiseled with a small finial extension. The arm features silver and there and rate very fine with sharp edges and the expected light mountings overall and was likely part of a sporting set. The ramrod dings and handling marks that come from the years. There is island thimble and tailpipe are lightly engraved while the front extension of the carving around all of the furniture with some light excellent quality open wide bow triggerguard shows light intertwining engraving and scant flowing scroll at the rear of the dovetail tangs. Each of the stock flats has chiseled fleur-de-lis front. The wide flared silver butt cap has dual straps been branded with a capital letter "K" and feature a pierced open flowing with light floral petal scalloping surrounding the cap proper, which has a rococo scroll sideplate with unengraved monogram field and a capital script "P" engraved thereon. The semi-fancy silver sideplate grotesque serpent at the front of each devouring the front lockplate mimics the chiseling and engraving at the triggerguard's front extension screws. The locks are very crisp and mechanically functional and the and is neatly engraved "1". The European walnut stock rates excellent original brass faced ramrods are included (one may be a later antique with a nice horn forend tip, light island carving on each stock flat and replacement but it is of the finest quality and mimics the other rod around all of the furniture, the tailpipe with light flourishes of scroll, precisely); the top jaw and screw of one arm show evidence of having additional light scroll surrounding it, and nice open carved flowing scroll been lightly cleaned but appear to be original. Bresican gunsmith around the upper tang ahead of the buttstock socket. The arm retains all Lazarino Cominazzo was known for his very fine work, this house has its original varnish and shows no restoration or sanding, with a few light sold arms in the past equipped only with his barrels, they being of handling marks here and there and an interesting carved letter "M" on excellent quality and harvested for use on later arms. Johann Christoph the diagonal portion of the stock between the tang and the sideplate. Saps (I.C. Saps / Berlin) according to Stockel was the regimental The buttstock socket would've accepted a dual-winged key which gunsmith from 1744-54 for the "von Kalckreuth" Infantry Regiment No. 4, of Jung-Larisch's 2nd Division, hence the large capital "K" branded guarter-turned into the piece to lock it, allowing one to use the long range sights on the arm if necessary, obviously using the close range into the left stock flat. A very lovely pair of large martial holster pistols, sight when using the pistol as a side arm. The lock is crisp and no doubt utilized by some officer of import and wealth as was common mechanically functional and the arm is equipped with a single set trigger in that time period. (3F9670-432) {ANTIQUE} [David & Lore Squier which functions well and the original horn-tipped ramrod is present. As Collection1 (5000/7000) expected, a beautiful Kuchenreuter pistol, it would be interesting to have Est. 5,000 - 7,000 a talented craftsman construct an appropriate buttstock. 118	Very Fine U.S. Colt Single Action Army Artillery Model Revolver	120	Scarce Portuguese Contract K98K Bolt Action Rifle by Mauser
	serial #94854, 45 Colt, 5 1/2" barrel with a very good bore except for a		Oberndorf
	small section of moderate oxidation near the front sight. This revolver		serial #H5902, 8mm Mauser, 24" barrel with a bright excellent bore. The
	features a David F. Clark inspected frame, "G" inspected triggerguard		metal surfaces of this 1941-dated rifle retain about 95% original blue
	#71078, Ainsworth inspected barrel #3759 with correct early slant		with most of the loss due to some scattered fine oxidation staining along
	address, Ainsworth inspected cylinder with small bolt stops #0963		the barrel, a few tiny spots of light pitting along the wood line, some
	(extremely light), Ainsworth inspected backstrap #10104, early doughnut		thinning to gray-brown patina along the triggerguard and some small
	ejector head and early ejector rod housing with barrel boss. The		moderate scratches or light dings along the front sight base from hood
	condition of the revolver is excellent with the barrel and ejector rod		removal. The barrel bands show moderate thinning and toning to a deep
	housing retaining about 95% original blue finish with some scattered		gray-brown patina and the receiver ring showing some mild discoloration
	very light specks of surface oxidation staining and feathering still visible		or flaking of the finish. The brg-coded cupped buttplate is a dark gray
	around front sight. The cylinder shows about 90 - 95% original finish with		patina showing some mild freckling. All markings remain strong with very
	an identical surface as the barrel. The frame shows over 90% strong		nice Portuguese crest over "1941" on the receiver ring, Mauser
	original color case hardened finish with scattered light specks of		commercial address on the left wall, eagle firing proofs and proper
	oxidation staining. All markings are clear and legible except the cylinder		Mauser Waffenamts. The smooth walnut stock and handguard remain in
	number which was previously mentioned. The backstrap shows about		very good condition having been very lightly cleaned and are mostly
	40% original blue blending with a pleasing smooth brown patina. The		devoid of finish showing a couple of very neatly repaired thin cracks;
	triggerguard has nice striations down the front strap and shows about		one above the recoil bolt on the right side, and one rather more
	65% original blue. The grips are completely unmarked, look very nice,		moderate along the right side that extends for about 7" back from in
	are the proper style but the fit is slightly off and they may be from a		between the bands, and loops around to about the middle of the
	different, commercial revolver. An extremely handsome, high condition		handguard on the left side. The repairs are well executed and they go
	Artillery Single Action Colt with a lot of early components. (1C9898-20)		almost unnoticed at first glance. The stock otherwise shows just some
	{ANTIQUE} (4000/6000)		scattered light dings and handling marks and the original markings
110	Est. 4,000 - 6,000		remain visible with "(Eagle) / 135" on the right side butt and large Portuguese crest over "1941" on the left. The buttstock is matching the
119	U.S. Colt Single Action Army Cavalry Model Revolver serial #3716, 45 Colt, 7 1/2" blackpowder barrel with an about very good		receiver along the toe line and the handguard is also matching
	bore which shows strong evident blackpowder rifling but with light pitting		
	its full-length, a couple spots a bit more moderate. The barrel, cylinder		internally. Strangely, the barrel band spring is mismatched numbered "3092" but the remaining serialized parts are matching and the action
	and the triggerguard retain about 95% Colt factory blue, the arm		seems to function well mechanically. Also included is the original
	obviously returned to the factory for service post-1902, with the cylinder,		matching bayonet with mismatched scabbard "H81". The bayonet rates
	backstrap and frontstrap of triggerguard all bearing factory refurbish		very fine retaining about 90% original blue showing some overall mild
	number "685 B". We date the refinish to post 1902 as the left leg of the		thinning to gray-brown patina and a few light dings along the grip spine.
	triggerguard features the "VP" verified proof and the original Single		The blade shows light scabbard wear and a somewhat rough
	Action Army barrel was roll marked with the later "Colt Single Action		sharpening of the edge while the scabbard retains about 80% original
	Army 45" marking on its left side at the time of the service, Colt		blue. The walnut grips show some light dings and the bayonet is
	obviously not letting a gun leave without a caliber marking at that time		stamped with "(Eagle) / WaA883" and "88" Waffenamts. A very nice
	frame. The frame was not touched at the time and is a pleasing plum		example of these interesting contract Mausers. (13B9736-9) {C&R}
	and pewter patina with scattered light and pinprick pitting, it and the		(1800/2200)
	loading gate are assembly numbered to one another and the "U.S."		Est. 1,800 - 2,200
	marking on the left of the frame remains clear and legible. The hammer	121	Fine U.S. Model 1861 Percussion Rifle-Musket by James Mowry
	and trigger appear original and unmolested with the hammer spur		.58 cal., 40" barrel with a bright excellent bore. The metal surfaces
	showing the correct coarse checkering, the firing pin was replaced at		display a handsome muted silvery patina with some softened fine pitting
	some point, there being small peen marks around the rivet. The revolver		on the bands and in a few scattered areas on the barrel along with some
	features its original one piece walnut grip, antique ink pen numbered to		scattered small areas of light staining, a few tiny spots of old light
	the gun on the interior, rating very fine, perhaps showing a bit of a light		oxidation on the triggerguard and a few tiny impact marks on the barrel
	cleaning as the edges are somewhat soft; there are no remnants of		behind the rear band. The lockplate and hammer display some attractive
	cartouches and their fit is excellent. The underside of the barrel is early		smoky case-hardened colors with the lockplate properly marked "1864"
	style with the drilled recess for the ejector rod housing bolster just to the		behind the hammer and with a Federal Eagle ahead while "U.S. / JAs D.
	rear of the ejector rod housing screw hole, the remnants of a "C"		MOWRY. / NORWICH. CONN." is below the bolster. The breech of the
	inspectors mark can be seen as well as a capital letter "G", along with a		barrel is also dated 1864 while the quarter flat bears a clear "V / P /
	number "741". The barrel is clearly first-generation and the early roll		(eagle head)" proof and "CBC" inspection initials are on the left flat. The
	marking exhibits the correct broken characters within the die for a barrel this era; perhaps installed on the gun at the time of the refurbish, or just		black walnut stock rates very fine with nice crisp edges around the stock
	refinished then. Ejector rod is latter style with the kidney bean-shaped		flats with a very tiny chip ahead of the triggerguard and rear lockplate screw and some scattered light handling marks overall. The left flat
	ejector rod head rather than the bull's-eye. There is a bit of surface		features a boxed "HS" inspector's cartouche along with a smaller "R"
	oxidation scattered about the surfaces of the barrel and the grip straps		and lined-out "2" inspection marks while a lightly softened "S" is behind
	have flaked and toned to a plum brown patina. The cylinder exhibits		the triggerguard. The original sights and sling swivels are intact, a
	minor timing issues but is original to the gun, numbered identically to the		correct cupped tulip-head ramrod with retaining swell and threaded end
	frame, triggerguard and grip frame, all "3716". It shows a small "A"		is included and the action remains very strong and crisp. Also included
	Ainsworth inspectors marking as does the triggerguard and top of the		is a U.Smarked Model 1855-70 bayonet in very good plus condition
	backstrap with tiny "C" in the hammer cut below the sight groove. A		showing some scattered areas of fine pitting and light staining which fits
	couple screw slots show some light damage but otherwise they are		on the barrel perfectly. James D. Mowry supported the Union war effort
	unmolested. While Springfield Research Service does not list any data		by delivering 22,000 Model 1861 rifle-muskets between 1863-1864 with
	on this serial number, gun number 3632, 84 numbers away from this, is		this lovely example remaining in a very high state of condition.
	listed as "7th Cav. Recovered" in December 1880 and number 3667, 49		(23A9736-10) {ANTIQUE} (1200/1800)
	numbers away from this, was issued to "Co. D, 6th Cav.", February 20		Est. 1,200 - 1,800
	of 1876. A very respectable U.Saccepted Single Action Army revolver		
	that no doubt saw time on the Western plains in some troopers holster.

Lot Title/Description

122	Scarce German vz.24 Bolt Action Rifle Reworked Into K98K Configuration serial #2318, 8mm Mauser, 24" barrel with a mostly bright very good bore showing some light oxidation and fine pinprick pitting in the grooves with otherwise strong rifling throughout. The metal surfaces of this interesting rifle retain about 70-75% original blue, showing some overall thinning and toning to a mild gray-brown patina, along with a few areas of minor pinprick pitting along the extractor and trigger with some scattered areas of very light oxidation staining and mild freckling. All markings remain crisp and clear with the receiver ring showing the original "CESKOSLOVENSKA / ZBROJOVKA / –BRNO=" markings and Czech 1935 acceptance date on the left side. The German replacement barrel shows the appropriate eagle firing proof, the left side receiver ring also with eagle firing proof, German reapplied serial number and "XXI" Posen depot code. The smooth pistolgrip laminated hardwood stock and handguard remain in very fine condition showing a few very thin mild lamination cracks along the butt, some scattered light dings and handling marks one would expect from military service. There is a very small dent at the toe of the buttplate but this is unobtrusive, the stock is appropriately stamp-numbered matching along the toe line also showing at well. As would be expected from the depot rebuilt arm, the parts show a number of Waffenamts, at "D" and a "P" and the handguard is matching as well. As would be expected from the depot rebuilt arm, the parts show a number of Waffenamts, the barrel bands and buttplate showing "(Eagle) / 1", bolt with "(Eagle) / 140", bolt sleeve "(Eagle) / 37", "(Eagle) / WaA519" on the rear sight base and "(Eagle) / WaA25" on the floorplate. The triggerguard is the original Czech-marked part. The barrel band spring is numbered "5992", the bayonet lug "98" and the front sight hood and cleaning rod are no longer present. The remaining serialized parts including the bolt parts are matching and the action seems to funct	124	Prototype Joseph Rider Patent Outside Hammer Rolling Block Sporting Rifle 38 RF, 24" octagon barrel with a bright excellent bore. This very rare prototype Rolling Block rifle is beautifully engraved with game scenes on its frame. The top flat of the frame is marked "J. RIDER / PATD / JAN'Y 3, 1865" which is the only marking on the rifle. The frame shows fabulous large foliate punchdot shaded scrollwork with a running buck being taken down by a dog on the right side while the left shows a buck with head up high feeding on leaves on a tree branch. The hammer and triggerguard also show nicely executed tasteful scrollwork. The rifle is a takedown with laterally mounted tapered pin through the frame locking into the bottom of the barrel at breech, a system favored by many percussion era gumakers. The condition of the rifle is superb with the barrel and frame retaining about 97% original blue with thin areas starting to show a pleasing smooth brown patina. All markings and engraving remain crisp and screwheads are clean. The rifle features checkered walnut stocks which show extremely fine figure on both sides of stock with straight grain through the wrist, a very fine and carefully selected piece of walnut. The forend is highly figured as well with hom tip and both show checkered panels with curved flowing borders. The fancy scroll triggerguard and butplate are of nickel-plated brass with 95% nickel finish remaining overall. The butplate has an hinged oval trapdoor which is steel and engraved in scroll. The rifle is sighted with a simple stud front mounted in dovetail and a flip up rear ladder sight mounted on the top of the barrel. Both sights are beautifully hand crafted as is the balance of the rifle. This rifle is featured in Roy Marcot's Remington Rolling Block Sporting and Target Rifles on pages 14 and 15 where it is illustrated and described. Marcot notes that this rifle is almost identical to another rifle made by Remington and submitted for Ordnance Trials in early 1865. The rifle comes with a second origina
	/ 1", bolt with "(Eagle) / 140", bolt sleeve "(Eagle) / 37", "(Eagle) /		simple stud front mounted in dovetail and a flip up rear ladder sight
	floorplate. The triggerguard is the original Czech-marked part. The barrel		as is the balance of the rifle. This rifle is featured in Roy Marcot's
	parts including the bolt parts are matching and the action seems to		
	that would make a very fine addition to any advanced German martial		24" octagon barrel in 32 RF and a period wooden takedown case. This
100	Est. 1,800 - 2,200		Rolling Block. A fine opportunity for the Remington collector to acquire a

	otherwise strong rifling throughout. The metal surfaces of this pistol	125	Est. 8,000 - 12,000
	mild gray freckling here and there and the extractor retains most of its		blue with most of the wear due to some thinning from holster wear along
	number is somewhat light, the "8" having been double-struck and the		dings. The bottom of the triggerguard and floorplate have been lightly
	left side. The checkered walnut grips are stamp-numbered to the gun		toning to a mix of pewter gunmetal and mottled gray patina with the
	original varnish and showing just a couple very lightly chipped points,		rear sight remain bright and the fire control group is a smooth matte gray
	receiver, locking block, rear sight piece and bolt are numbered "3736"		
	appears to be an honest factory error. One original magazine retaining about 95% original blue showing some light freckling and thinning is		proper Imperial German military proof and the right chamber flat with Austrian "W-n (Eagle) 16" acceptance. The grooved walnut grips are
	included. The magazine is stamp-numbered matching the pistol and the action seems to function well mechanically. A very attractive example of these interacting end desirable initials (420000 A) (6200) (2000)		stamp-numbered to the gun and remain in very fine condition retaining a health around of original varnish showing a small scratch near the
	these interesting and desirable pistols. (13B9890-4) {C&R} (3000/4000) Est. 3,000 - 4,000		base of the left panel and some light dings along the right. The floorplate is mismatched numbered "427" and the remaining serialized parts are matching. The lanyard ring is intact and the action seems to function
			well mechanically. Also included is the original wooden holster / shoulder stock that is stamp-numbered matching "136" on the
			attachment hardware. The stock rates very good plus as lightly cleaned and refinished long ago showing a 2" thin crack through the lid button
			counterbore, some overall light dings and handling marks. The left side body shows a very faint Imperial German military proof below the
			hardware and the left side lid shows a faint Austrian acceptance stamp. All of the hardware retains a generous amount of original bright fire blue
			toning to a mild gray-brown patina and the stock locks up well on the pistol with a little side-to-side play. This is a very nice example of a correst and desirable Austrian excitors theorem bandle nictal with the
			scarce and desirable Austrian-contract broomhandle pistol with the added bonus of its original stock. (13C9888-4) {C&R} (2500/3500) Est. 2,500 - 3,500

	44 RF, 28" octagon barrel with a bright excellent bore. This is an		sling swivel hardware, nosecap also retain most of their lovely colors
	extremely rare and possibly unique rifle built on Leonard Geiger's patent		showing some wear at the heel of the buttplate. The rear sight slider
	#37,501 of January 27, 1863. The gun is completely unmarked except		spring, action pins and pin retainer plate retain 97% brilliant fire blue, the
	for a single "J" stamped into the inside of the forend along the barrel		retainer plate is rather unusual being of straight design, split down the
	channel. The maker is not known; the quality and condition are superb.		center and does not expose the left sides of the pins. The hammer and
	The rifle features a rolling breechblock and hammer with a large		breechblock remain mostly bright showing some remnants of old
	protruding striker on the hammer which fits into an opposing milled slot		oxidation staining and mild gray freckling while the E. Remington & Sons
	in the breechblock allowing the tip of the striker to contact the rim of the		address and patent dates along the upper tang are mostly crisp having
	cartridge when fired. The breechblock locks as the hammer falls, the		been poorly-struck by the factory. The smooth walnut stocks remain in
	same as the production Remington Rolling Block rifles. While the striker		near excellent condition retaining almost all of their arsenal oil finish and
	is quite robust, it is likely the most problematic part of the design. The		showing a few sparsely scattered light dings, handling marks and a
	barrel retains 95% original brown finish overall which has a lovely		small spot of finish loss along the toe line where it appears a sticker
	appearance. The action features an octagon breech and shows 95%		once was. The stock retains its Remington factory collection brass
	original high polish blue finish. The hammer and breechblock pins are		inventory tag along the toe line numbered "61". The original cleaning
	mounted in the rounded frame and show concentric rings around each		rod, sights and sling swivels are intact, the barrel is equipped with the
	pin on both sides of action. The action retains 95% bright original high		right-side saber bayonet lug and the action functions crisply. A beautiful
	polish blue finish overall with just some very light old surface abrasions		Rolling Block rifle for the advanced Remington collector. (13D9670-22)
			{ANTIQUE} [David & Lore Squier Collection] (4000/5000)
	which do not detract. The fancy finger loop triggerguard houses a single		
	trigger. All screws in the action are polished to follow the contour of the		Est. 4,000 - 5,000
	rounded action and their slots remain generally unmaligned. The rifle is		
	fitted with checkered stocks which are of highly figured American black		
	walnut. The toeline is flat which is often seen on percussion rifles, the		
	buttplate is a steel rifle type and the buttstock is checkered to the action.		
	The forend shows a small checkered panel around the retaining screw.		
	Both stocks remain in excellent condition retaining 97% original finish		
	with crisp checkering. There is no provision for a rear barrel sight and		
	the adjustable tang mounted peepsight features turned base which the		
	staff slides into with an adjustment knob ad the top of the turned base.		
	This rifle is illustrated and discussed in Roy Marcot's Remington Rolling		
	Block Sporting and Target Rifles on pages 12 and 13. It is described as		
	"magnificent" in the description and Marcot estimates it was built in 1864		
	or 1865. A rare chance for the advanced Remington collector to acquire		
	this important and very fine piece in the evolution of the Rolling Block.

#### Lot Title/Description

Lot Title/Description

Exquisite Exhibition-Grade Pair of J Adam Kuchenreuter Percussion Pocket Pistols .36 cal, 3" octagon barrels showing very good bores. This astonishing set of pistols showcases the exceptionally exquisite work that Kuchenreuter was known for. Obviously made for some person of import, or more likely for an exhibition, the pistols are cased en suite in a French fitted burl faced presentation case with a complete complement of accessories and tools. The metal treatment on the arms is indeed artistry in metal. Nearly every iron and steel surface shows exquisite chiseled open flowing scroll inlays in silver and gold with the finest satin finish damascus pattern visible beneath on the barrels. The largest open flowing scroll inlays with scallop shell and floral motifs are of silver, with smaller inter-mingled gold inlays of simple scroll with scalloped floral and dot decorations. Each pistol is fitted with a diminutive simple blade front sight drift-adjustable in a tiny dovetail, with a tiny v-notch elevation-adjustable rear sight and each features the makers name inlaid in gold across the top flat "J Adam Kuchenreuter in Regensburg", each numbered in turn to the front of the sight blade "1" and "2". The balance of the iron surfaces are identical with the steel beneath a pewtery gunmetal finish, the hammers showing a tiny bit of light oxidation staining from the years. The lockplates are neatly rebated at their rear edges and each features a pivoting weighted hammer rest safety catch. The arms are stocked in a lovely grade of French walnut which is overall carved with flowing relief scroll with the finest background stippled shading. The grooved butts flare very slightly and are capped with lovely flat blued steel scalloped-edge plates with light gold and silver inlay, each with a very handsome chiseled silver relief cap of a male African lion, fine silver wire inlay gracing the front and rear of each grip with an unengraved squarish silver monogram plate atop each wrist. The stock flats of each pistol exhibit some light handling marks and flaking varnish but each rate very fine to excellent over all, with a tiny drying crack evident in the thin wood beneath the flared bolster area. Each pistol is equipped with a single set trigger and the locks function properly mechanically. Inside the case we find patch cutter, original bullet mould, nipple spanner, turnscrew, mainspring vise, a very neat key for adjusting the rear sight elevation, loading rod, nickel silver cleaning rod with a mallet-style head of horn, powder measure and a breech wrench, all our bright-polished, the turnscrew and nipple spanner with burl handles and nickel silver inlays. There are two nickel silver patch or cap containers and a lovely ribbed powder flask of bone with nickel silver top and bottom, its stopper has gone missing but would certainly be easy for a craftsman to fashion. The turn screws, mainspring vice and sight adjustment tool all feature the same geometric pierced cross-fleury / cross bottony quadrefoil decoration. The interior of the case is a deep forest green baize with burgundy outlining and features an impressed gold makers mark on the interior lid "Johan Adam/Kuchenreuter/in/Regensburg". The case proper is hardwood with an exterior walnut burl veneer applied with a small brass geometric inlay in the lid, it rates excellent, the lid slightly warped. It is clear that no expense nor effort of workmanship was spared in the construction of these arms and their accessories, it was doubtless a showpiece either in Kuchenreuter's shop proper or in some European exhibition. Kuchenreuter is known for constructing the highest-quality arms seen in the period, this pair is no exception and is worthy of the finest collection of ornate or high-quality European pistols. (3F9670-493) {ANTIQUE} [David & Lore Squier Collection] (25.000/35.000) Est. 25.000 - 35.000

Rare Edwin Wesson two-barrel Percussion Pocket Rifle serial #175, .34 caliber, 12 3/4" barrel with an excellent bright bore. This is the earliest style of the Wesson pocket rifles which featured back action locks and bag shaped grip. The detachable shoulder stock has a patchbox and fits snugly through the gripframe. The top of the barrel is marked "E. WESSON. / NORTHBORO. / MASS" with eagle to left of the mark and "CAST-STEEL / 175" to the right of the mark. The lock shows typical mid 19th century American scroll as does the backstrap, barrel tang and breech. The triggerguard and bottom of the butt are also lightly engraved. The pistol is built on Wesson's typical takedown action with barrel affixed by a hooked lug into the tang and held in place by a single screw or bolt through the bottom of frame and into the barrel breech. Clark's patent false muzzles were used by Wesson, this one is no exception but the false muzzle is actually octagonal with just the last 3/16" turned round to facilitate the included brass starter. The false muzzle is Clark marked and is held in place by spring steel extensions which lock into corresponding notches in the sides of the barrel, the right side fastener is no longer present, the left is fully intact. The condition of the rifle is very nice with barrel retaining 75% original brown finish which is thinning evenly and surfaces remain smooth and completely free of pitting. The lock shows a perfectly smooth surface and shows a pleasing blend of faded color case-hardened finish and a gray patina. The grip frame is a mellow grav patina with traces of original finish in protected areas. The stock is German silver mounted with simply shaped patchbox with tasteful border engraving, it is held closed by a spring loaded clasp which locks into the rear of the lid. The buttplate is very typical Wesson being engraved on tang which is faceted with fancy wedding band where it meets the wood. The locking mechanism is well designed and robust with a 5/16" x 5/8" rectangular lug which fits into both iron gripstraps and locks with a spring-loaded tab which protrudes slightly from the forestrap. The condition of the stock is excellent with over 90% original finish remaining and with a very nice surface. The rifle is sighted with a fine stud front mounted in dovetail and a tang mounted lollipop rear. There is no provision for a rear barrel sight. The rifle comes with a second 31" octagon barrel in .41 caliber which is later but definitely period, mid 19th century, it is marked on its top flat simply "PHILADELPHIA". The quality of the barrel is excellent, it looks like something Krider could have made and perhaps he did. This barrel retains 98% original brown finish, the bolster is carefully shaped to match the original and the bore is excellent. The second barrel also has a false muzzle which is the normal round shape and a second starter comes with the barrel. This barrel is sighted with a rear mounted open barrel sight (missing elevator) and a fine blade front with neat removable hood. Edwin Wesson was the second of ten children born to Rufus Wesson and Betsey Baird. Rufus Wesson built agricultural plows and was never involved in the manufacture of firearms but three of his children went on to successful careers as gunmakers. Edwin was the oldest of the gunmaking Wessons followed by Daniel Baird of Smith & Wesson fame, and finally Frank Wesson who was a prolific maker of rifles, pistols and pocket rifles. Wesson pocket rifles are guite rare and this example is very fine and suitable for any collection of antique American arms. (1E9670-454) {ANTIQUE} [David & Lore Squier Collection] (3000/5000) Est. 3,000 - 5,000

Lot Title/Description

148 Pair of British Flintlock Queen Anne Belt Pistols by Griffin 150 Remington Model 1890 Single Action Army Revolver About .60 cal., 5 1/2" round barrels with lightly oxidized bores. The serial #1337, 44-40, 7 1/2" barrel with a good bore that shows light barrels are a pleasing smooth pewter gray and flaked brown patina, scattered pitting but shows strong rifling its entire length. This revolver is pistol No. 1 shows some remnants of original blue at its breech end, finished in original nickel and remains in a very fine state of both have cannon-belled muzzles and dual turned medials. The balance preservation. There were barely 2000 of these revolvers produced of the iron surfaces are a pleasing smooth gunmetal gray showing some making them quite rare as compared to the 1875, of-which there were scant remnants of silvery case-hardening, the right flats of each with nearly 30,000 produced. The top of the barrel bears "REMINGTON ARMS CO., ILION, NY." address while the left side of the frame is open foliate engraving and makers name in riband "Griffin London" Each features British proofs on the bottom and both barrel and frame of marked "44 C.F.W.". The barrel and ejector rod housing retain about each are numbered in turn "1" and "2". Gun 1 shows some light 93% original nickel plated finish with most loss near the muzzle where circumferential scratching and some tool marks to the medial and the there is some peeling finish, with the exposed metal being a smooth tightening lug on the underside of the barrel, gun 2 remains clean and even gray patina that blends well with the nickel. The cylinder retains unblemished. The bow of each guard is a plum patina and shows light about 95% original nickel plated finish with most loss due to some floral engraving, with simple sprays on the top tang of each, the left side peeling at the leading edge and with a little minor bubbling to the finish. flat of each frame with a nice period belt hook affixed. The English The frame shows about 85% original nickel plate with most loss on the walnut grips both rate very fine to perhaps near excellent, showing the backstrap which is a brown patina, along with some loss on the rear expected light dings and handling marks that come from the years, gun right side of frame. There is a little light bubbling in the finish but overall 2 a few more than gun 1, the latter with two unobtrusive drying cracks the appearance is very nice. The two-piece hard rubber grips rate very on its right side. There is a beautiful teardrop-shaped silver relief buttcap good showing no chips or damage and just light wear to the checkering, with an interesting martial panoply at the center showing a male lion commensurate with the balance of the wear on this revolver. A very fine surmounting a pyramid, cannon, shot and flag at the base, one cannon example of these desirable and scarce Remington revolvers. (1B9362-87) {ANTIQUE} [Edward W. Marron, Jr. Collection] (4000/6000) transfixed vertically with the Lions paw on its cascabel, this is all surrounded by open rococo foliate scroll: sadly the image on pistol No. 1 Est. 4.000 - 6.000 Exquisite Pair of Leonard Francolini Factory Engraved and 151 is somewhat obscured as there are a couple scrapes across the butt. Consecutively Serial Numbered Colt Single Action Army Revolvers Atop the wrist there is a silver rococo monogram plate surmounted by a serial #SA04058 and SA04059, both 45 Colt, both with 7 1/2" barrels gladiators helmet with flag and trumpet, the center of each monogram plate engraved with a heart-shaped emblem within. Both locks are crisp with as-new, unfired bores. This exquisite pair of Colt revolvers was and mechanically functional, pistol 2 is missing its top jaw, and the ordered from the Colt Custom Shop in 1979 by Dr. Daniel Monroe of screw is a modern replacement, but these detractors are small. The New York and are incredibly engraved and embellished by Colt factory arms where obviously custom-ordered with the special buttcaps, master engraver Leonard Francolini. Serial number 04058 is unfluted perhaps by an officer who had served overseas. Really a very and retains all its rich original factory royal blue, with the mirror-polished handsome pair of pistols, Joseph Griffin of London it would appear was sides of the hammer still brilliant. It features flowing scroll engraving in active roughly 1750-1787. (3D9670-478) {ANTIQUE} [David & Lore factory "B" coverage and has wonderful fine gold wire inlay at each end Squier Collection] (2500/4000) of the barrel, each end of the cylinder and accenting the borders of the Est. 2,500 - 4,000 frame and recoil shields. There is additional fine gold wire inlay atop the Handsome Cased Pair of British Large Bore Boxlock Percussion Pistols barrel behind the front sight as well which accents the factory scroll 149 beautifully. The right side of the frame features a lovely gold inlaid by Field 17 bore (about .65 cal), 3 1/2" octagon barrels with bright excellent chiseled-in-relief image of an American bison against a woodland bores. This is a very attractive pair of pistols, the metal surfaces of both backdrop while the left side of the frame shows a seated coyote howling arms completely case-hardened. The barrel of the first pistol shows at the full moon, slightly shrouded in clouds against a desert backdrop, both the coyote and moon also in gold. The two-piece factory ivory grips somewhat muting strong case-hardened colors throughout along with a few scattered small areas toning to mild gray-brown patina and some with gold Rampant Colt medallions are lovely and rate also as-new, scattered light dings. The frame retains perhaps 90% color showing the very beginnings of some drying checks as they naturally case-hardening quite vibrant in most areas with muting along the tangs, age. The gun is, as-expected, un-turned, un-fired since leaving Hartford handling marks and some light oxidation staining along some of the high in 1979. Gun number 04059 is also unfluted and retains all of its edges. There are a few spots of small perhaps moderate oxidation stunning factory royal blue; the mirror-polished sides of the hammer also staining along the hammer nose and bolster but this is unobtrusive. The brilliant. Mr. Francolini has inlaid the same flawless fine gold wire on the hammer is embellished with a dolphin motif and the frame shows front and rear of barrel and front and rear of cylinder, with the cylinder tasteful fine quality English scrollwork throughout. The trigger retains a featuring dual lines along its rear circumference. A matching flourish of few flakes of bright fire blue, the forward frame screw also showing nice gold wire inlay is to the rear of the front sight and matches precisely the straw color, the barrel flat is crisply marked "FIELD LONDON" and the inlay on the scroll engraved revolver. The right side of the frame shows a gold inlaid American bald eagle chiseled-in-relief, wings spread, talons arm bears Birmingham black powder proofs. The finely checkered walnut grip remains in very fine condition showing a little minor wear bared, ferociously coming in for the kill amidst a backdrop of billowing along the checkering, some scattered light handling marks and nicely clouds. The left side of the frame has a lovely gold inlaid, chiseled-in-relief image of the venerable Rampant Colt astride the globe. mullered borders. There is a blank German silver monogram plate atop the wrist and the arm is fitted with front and rear sights. The lock also accented by loose billows of clouds. The two-piece factory ivory functions crisply at both full and half cock. The second pistol retains a bit grips with the gold Rampant Colt medallions are also as-new and are more vibrant case-hardened color, perhaps 90% overall and is quite showing the beginnings of drying checks from their natural aging lovely showing just a few small areas of mild gray-brown patina and process. These marvelous works of art come in burnt umber-colored some sparsely scattered small spots of minor oxidation staining. The faux-leather covered Colt Custom Shop presentation cases with Samuel trigger retains a healthy amount of bright fire blue, as-does the top Colt's coat of arms emblazoned in gold on their lids. The interior is lined action screw. The checkered walnut grip remains in very fine to near in a marmalade-colored baize which adds a beautiful contrasting accent excellent condition showing a few very lightly chipped points and minor to both the cream-colored ivory and the exquisite deep blue. The handling marks and retaining almost all of its original varnish. The pistol included factory letter lists the guns as a consecutive pair and verifies is embellished identically as the first and the lock functions crisply. The their configurations. Additionally it states that these guns are numbers 4 pistols are housed in a very fine mahogany case that shows some light and 5 of the last 10 guns that Leonard Francolini engraved while dings and fine scratches along its exterior with a reeded brass disc set employed by Colt. In addition to showing the arms serial numbers and into the lid and nice brass lock escutcheon, the lock maker-marked by J. the factory order number, the letter lists shipment to Sloan Bramah of Piccadilly. The interior is lined with green baize that shows Sporting-Goods of Connecticut in September 1979. The work of some areas of light staining and minor scuffs along with a few small Leonard Francolini is, like that of other Colt engravers, legendary. He repaired patches and small repairs to a few spacers. The case holds a has engraved guns for celebrities and heads of state and his works are number of fine original accessories including a James Dixon & Sons oil treasured heirlooms to those who own them. These very guns are pot, partial japanned tin of Eley anti-corrosive percussion caps with nice featured in a full-page image in RL Wilson's The Book of Colt Engraving orange label, small Hawksley powder flask that rates near excellent, a on page 494 (second edition). Rarely are Francolini's works offered for pair of spare nipples, 17 bore single cavity round ball bullet mould, a public sale, these examples are a testament to his artistry and skill. This combination nipple wrench / barrel spanner tool and a selection of round is a very rare opportunity for the advanced Colt collector, firearms balls. A lovely cased pair for the antique arms collector. (13C9833-73) investor or lover of embellished arms to own a consecutive pair of this {ANTIQUE} (2500/3500) master's art. Astonishing and investment-grade. (39765-7,8) {C&R} Est. 2,500 - 3,500 (15.000/25.000) Est. 15,000 - 25,000

A very good "example piece" of these desirable Remington revolvers. (13B9362-95) (ANTIQUE) [Edward W. Marron, Jr. Collection] (2000/3000) Est. 2,000 - 3,000 Setting and the screwheads remain clean and seemingly unturned. The rifle features a straight grip buttstock and full length forend, both of walnut with some really super figure in the buttstock. The stocks remain in wonderful condition with 98% original finish remaining overall and just the normal light handling marks here and there. The rifl is equipped with sling swivels mounted in bottom front of action and in bottom of top band and comes with its original ramrod. The original military ladder rear and stud front sights are present. The accompanyin factory letter confirms the configuration and shows the rifle invoiced on September 211, 1878 to R.B. Yates in Rochester, NY. Yates was the Secretary and Inspector of Rifle Practice for the 7th Division of the N.Y. National Guard. He requested the rifle be received no later than September 27th; it would be reasonable to assume this rifle is completel honest and original without any alterations of any kind. A wonderful Borchardt Officer's Rifle worthy of the finest of antique American arms collections. (TES790-42) (ANTIQUE} [Bob Borcherdt Collection] (8,000/12,000)	checkered hard rubber grips with RA Co. monograms remain in about	only 48 examples ever produced. This particular rifle remains in fabul
cracks and light chips, some overall smoothing and light dings. The loading gate and triggerguard are matching the frame and the action seems to function well mechanically with very good timing and lock-up. A very good "example piece" of these desirable Remington revolvers. (13B39362-95) (ANTIQUE) [Edward W. 	position upon closing the breechblock although the mechanism is a bit			
1	more complicated than that seen on the final model. The high spur			
	hammer is quite a bit thinner than those of the production model and is a			
	separate component from the locking piece which has a channel in the			
1	center for the hammer to rest. Upon cocking, the breechblock will			
	automatically open about three quarters of the way and upon pulling			
	back will actuate the extractor. Closing the breechblock drops the			
1	hammer to the safety position necessitating manual cocking like the final			
	production model, the breechblock cannot be opened when the hammer			
	is in the safety position or at full cock. Apparently the only way to unload			
1	the arm when at full cock would be to carefully lower the hammer			
	completely and then continue through cycling the action to get the			
1	cartridge out, this would be changed on the final production model which			
1	allows the breechblock to be opened manually when the hammer is at			
	full cock. A very fine and interesting prototype for the advanced			
1	Remington collector. (13C9670-359) {ANTIQUE} [David & Lore Squier

Lot Title/Description

Interesting & Early Remington Hepburn No. 3 Sporting and Target Rifle	168	8 Very Rare Whitney Martially-Marked Saddle Ring Carbine
with U. S. Cartridge Co. Markings	100	serial #56384, 45-70, 22" barrel with a bright excellent bore. The barrel
serial #54, 40 1 7/8, 30 3/8" part octagon part round barrel with a bright		of this attractive carbine retains perhaps 80% original blue showing
very good plus bore showing some scattered spots of light pitting and		overall thinning and toning to a pleasant mild gray-brown patina with
crisp rifling throughout. The barrel of this rifle retains perhaps 70%		some areas of old oxidation staining and light pitting nearer the breech
original blue toning overall to a pleasant deep brown patina with areas of		around the rear sight base and left side. The "U"-marked barrel band
old minor oxidation staining scattered about, small sparsely scattered		retains a similar amount of bright blue showing moderate edge wear
spots of light pitting with one more moderate area for about 3 1/2" along		toning to gray-brown patina and some scattered light dings. The action
the left side flat near the breech. The E. Remington & Sons barrel		likewise retains about 80% original case-hardened colors that remain
address remains crisp, the underside is marked "40 1 7/8" and it is		quite stunning along the upper half of the right side, receiver ring and
stamp numbered matching the receiver beneath the forend. The action		throughout the left side still showing remnants of protective lacquer with
is toning to a pleasant gray case-hardened patina with some mild brown		overall toning to a pleasant silvery gray patina with some scattered light
freckling, a few pinprick pits and areas of generous smoky colors overall.		freckling and a small area of old light pitting on the left side. The
The breechblock retains perhaps 70% original bright blue flaking to a		hammer and breechblock remain partially bright showing some mild
pleasant gray-brown patina while the hammer and trigger show a few		brown freckling throughout while the split retainer plate is toning to mild
errant flakes of brilliant fire blue. The Hepburn patent marking on the		gray-brown. The retainer plate screw head shows very good fire blue,
right side edge of the frame remains crisp and the top of the action is		the sides of the trigger with pale fire blue and the buttplate retaining
neatly stamped "U.S.C.Co." The action screws show unique punch		about 80% original blue thinning along the edges. The tang is unmarked
marks on their heads and adjacent on the frame to insure their correct		and the breech end of the barrel is marked only "45". The smooth walnut
installation upon reassembly, very likely done by the cartridge company		stocks remain in very fine condition retaining much of their oil finish and
for convenience during their own testing. The smooth walnut forend with		showing some scattered light dings and handling marks, a bit more
steel schnabel tip and checkered round knob pistolgrip buttstock remain		noticeable near the buttplate and along the forend. The buttstock shows
in very good plus condition showing mostly worn finish, a neatly repaired		some rather attractive straight grain figure throughout and is stamped on
small chip at the toe, scattered light dings and handling marks		the left side wrist with a nice "ESA" inspector's cartouche and a smaller
consistent with use. Both forend and buttstock are stamp-numbered		boxed cartouche behind the triggerguard that is no longer legible. The
internally matching the receiver and the forend also shows a small "143"		front sight is a replacement silver bead commercial sight, the original
stamped along the bottom. The tangs are assembly numbered on the left interior sides "41", the rifle is sighted with a flattop sporting rear sight		military rear sight and saddle ring are intact and the action seems to
and small German silver blade front and the action seems to function		function well mechanically. The history of these Whitney carbines remains elusive but it is known that Whitney submitted some of their
well mechanically. A very interesting rifle, extremely early and with		rolling block designs to New York State and other federal trials. While
period U. S. Cartridge Co. property markings to boot, it remains in very		conforming to the simplified Whitney Type II action style this gun must
respectable handsome condition considering the extensive use cartridge		be from quite a bit earlier than Flayderman's production range of
test guns can be subjected to. This rifle would make an excellent		1881-1888 as Erskine Allin retired as Springfield Armory Master Armorer
addition to any advanced Remington collection. (13D9733-4)		in 1878. This is a very handsome carbine that would make an excellent
{ANTIQUE} (3000/5000)		addition to any advanced U.S. martial collection and represents likely

The markings remain intact and strong with legible "REMINGTONS ILION" address and patent dates at the upper tang and "U"-marked barrel bands. The left side of the barrel near the breech also shows a more modern Birmingham proof, likely applied when the arm was released from some sort of stores, and the top of the barrel with "HH3". The smooth walnut stocks remain in good condition having darkened from the years and showing the expected overall moderate dings and abrasions from military service along with a thin 1 3/4" chip along the right edge of the forend. The rear sight is missing its slider, the sling swivels and cleaning rod are intact and the action seems to function well mechanically. The left side butt shows a lovely inlaid silver plate that has taken on a mild tarnish and shows a few scattered light dents. It is neatly engraved "TROPHY FROM TEL-EL-KEBIR / Sept. 13th 1882 / Presented by / QTR MASTER SERGT GLYNN 2nd BATTN GRENADIER GUARDS / TO THE / Sergeants Mess / NORTH
and some on the breechblock spur, a number of small dings scattered along the left side barrel that do not breach the finish and some overall minor handling marks. The screw heads show a little bit of light slot wear and the rear sight shows remnants of original blue along with two small dings along its right edge. The Remington Arms Co. address and patent dates along the upper tang remain crisp and clear and there is what appears to be a small "1H" stamped on the lower tang. The smooth walnut stocks remain in very good condition retaining a healthy amount of oil finish with a couple tiny flakes at the heel, small drying crack at the upper tang and some overall light dings and handling marks. There is a faint "H4" stamped behind the lower tang and a brass inventory tag ahead of the toe numbered "2493" that appears to be affixed over where a sling swivel hole may have been. The tag may be from the Remington Factory arms collection although its shape is slightly different and it is placed a bit lower than other examples. The original saddle ring and sights are intact and the action seems to function well mechanically. A very attractive example of these rare and desirable little carbines, most of which were furnished in Remington's full nickel finish. (13C9670-137) {C&R} [David & Lore Squier Collection] (2500/4000)		showing some scattered light pitting and frosting in the grooves with otherwise strong rifling throughout. The metal surfaces of this rifle have mostly toned to pleasant medium plum-brown patina showing some scattered fine pinprick pitting, a bit more moderate along the rear sight, barrel bands and rear sling swivel but otherwise remaining mostly smooth. The markings remain intact and strong with legible "REMINGTONS ILION" address and patent dates at the upper tang and "U"-marked barrel bands. The left side of the barrel near the breech also shows a more modern Birmingham proof, likely applied when the arm was released from some sort of stores, and the top of the barrel with "HH3". The Battle of Tel El Kebir was a major engagement of the short-lived Anglo-Egyptian War of 1882 in which the British domination over the country and continued control of the Suez Canal. Research confirms the 2nd Battalion Grenadier Guards indeed took part in the battle and a picture of the good sergeant and his comrades was also located, a copy of which will be included. The original photo is held by the Royal Collection Trust, noting it was acquired from Queen Victoria's collection and describes it as "four soldiers from the granader Guards who served in the Anglo-Egyptian War, from left to right are Quartermaster Sergeant Glynn, Private Wynne, Sergeant Major Thomas
and some on the breechblock spur, a number of small dings scattered along the left side barrel that do not breach the finish and some overall minor handling marks. The screw heads show a little bit of light slot wear and the rear sight shows remnants of original blue along with two small dings along its right edge. The Remington Arms Co. address and patent dates along the upper tang remain crisp and clear and there is what appears to be a small "1H" stamped on the lower tang. The smooth walnut stocks remain in very good condition retaining a healthy amount of oil finish with a couple tiny flakes at the heel, small drying crack at the upper tang and some overall light dings and handling marks. There is a faint "H4" stamped behind the lower tang and a brass inventory tag ahead of the toe numbered "2493" that appears to be affixed over where a sling swivel hole may have been. The tag may be from the Remington Factory arms collection although its shape is slightly different and it is placed a bit lower than other examples. The original saddle ring and sights are intact and the action seems to function well mechanically. A very attractive example of these rare and desirable little carbines, most of which were furnished in Remington's full nickel finish. (13C9670-137) {C&R} [David & Lore Squier Collection] (2500/4000)		showing some scattered light pitting and frosting in the grooves with otherwise strong rifling throughout. The metal surfaces of this rifle have mostly toned to pleasant medium plum-brown patina showing some scattered fine pinprick pitting, a bit more moderate along the rear sight, barrel bands and rear sling swivel but otherwise remaining mostly smooth. The markings remain intact and strong with legible "REMINGTONS ILION" address and patent dates at the upper tang and "U"-marked barrel bands. The left side of the barrel near the breech also shows a more modern Birmingham proof, likely applied when the arm was released from some sort of stores, and the top of the barrel with "HH3". The smooth walnut stocks remain in good condition having darkened from the years and showing the expected overall moderate dings and abrasions from military service along with a thin 1 3/4" chip along the right edge of the forend. The rear sight is missing its slider, the sling swivels and cleaning rod are intact and the action seems to function well mechanically. The left side butt shows a lovely inlaid silver plate that has taken on a mild tarnish and shows a few scattered light dents. It is neatly engraved "TROPHY FROM TEL-EL-KEBIR / Sept. 13th 1882 / Presented by / QTR MASTER SERGT GLYNN 2/ MBATTN GRENADIER GUARDS / TO THE / Sergeants Mess / NORTH MIDDLESEX RIFLES". The Battle of Tel EI Kebir was a major engagement of the short-lived Anglo-Egyptian War of 1882 in which the British domination over the country and continued control of the Suez Canal. Research confirms the 2/nd Battalion Grenadier Guards indeed took part in the battle and a picture of the good sergeant and his comrades was also located, a copy of which will be included. The original photo is held by the Royal Collection Trust, noting it was acquired from Queen Victoria's collection and describes it as "four soldiers from the Grenadier Guards who served in the Anglo-Egyptian War, from left to right are Quartermaster Sergeant Glynn, Private

170				
170	Handsome Henry Repeating Rifle by New Haven Arms Co. Identified to		172	Rare Smith & Wesson No. 3 Third Model Russian Revolver with British
	Oliver C. Hansbrough, Colorado Mine Owner and Sheriff of Boulder		=	Retailer Markings & 5 1/2" Barrel
	County			serial #50211, 44 S&W Russian, 5 1/2" ribbed round barrel with pinned
	serial #10397, 44 Henry RF, 24" octagon barrel with a good bore			front sight and a bright near excellent bore showing just a few tiny
	showing scattered light pitting and oxidation with strong rifling			pinprick pits scattered about and strong rifling throughout. The metal
	throughout. The barrel of this standard production rifle has mostly toned			surfaces of this revolver retain perhaps 45-50% original bright blue quite
	to a pleas ant deep plum-brown patina showing some scattered shallow			strong along the left side barrel with the balance toning to a deep
	old dings along the edges and some very sparsely scattered remnants			plum-brown patina showing some old light pitting and spots of old
	of old oxidation staining, the surfaces remaining mostly smooth. The			oxidation staining. The triggerguard and hammer have mostly toned to a
	lever and hammer are similar, the sides of the hammer more of a pewter			silvery case-hardened patina, the triggerguard showing a little cleaned
	gunmetal tone. The barrel address and serial number remain completely			pinprick pitting along the bow and the hammer with some good smoky
	intact and very strong, the serial number actually quite crisp. The action			colors along its back. The screw heads show a little minor slot wear and
	and buttplate have toned to a wonderful rich ocher patina, the action			all markings remain intact and strong, the major components stamped
	showing some scattered old dings and light tool marks that have mostly			with small British black powder proofs and the base with a small "P" and
	smoothed-over from the years and are mostly unobtrusive, a few			boxed "1874". The single line barrel address and patent dates remain
	perhaps a bit more moderate along the top with the edges remaining			crisp and clear with final date of August 24, 1869. The address starts
	quite strong and well-defined. The lower tang retains a very strong			with the familiar small Maltese cross but interestingly, due to the short
	italicized "W" factory inspection stamp of Oliver Winchester. The screw			barrel length the markings end abruptly with "RUSSIAN", sans "MODEL"
	heads show some light slot wear from the years and the lever shows a			or Maltese cross. The left side of the barrel is also neatly British
	little bit of lateral play. The smooth walnut buttstock remains in very			retailer-marked "WILLIAMS & POWELL, LIVERPOOL.", the marking
	good plus condition showing a worn oil finish with some scattered areas			obscured very slightly by some fine pinprick pitting but otherwise
	darkened from the years, a small old abrasion at the point of comb and			completely intact and legible. The smooth walnut grips remain in very
	scattered light dings. The toe of the buttplate is a little proud of the wood and it appears the stock was dented in at the toe long ago now showing			fine condition showing some scattered light dings, mild handling marks and their fit to the frame is excellent. The right panel is appropriately
	two small repaired cracks. The left side of the stock is affixed with a nice			stamp-numbered to the gun by serial number and the remaining parts
	German silver disc featuring an eagle and riband relief that shows mild			are matching by assembly number. Barrel-to-frame fit is excellent, the
	edge wear and is neatly stamped "OLIVE R C. HAN SBROUGH / DE			lanyard ring is intact and the action seems to function well mechanically
	NVE R, / COL." The stock is equipped with left side sling swivel and the			with solid timing and lock-up. Williams & Powell were prolific gunmakers
	barrel with corresponding swivel. The stock is stamp-numbered "6875"			and retailers in Liverpool from 1833-1905 when they were acquired by
	and the inside of the buttplate also showing "6875". It has no doubt been			Westley Richards. A solid example of a very rare short barrel variation
	with this rifle since the period of use, matching in patina and wear, its fit			with the added bonus of British retailer markings. (13D9815-5)
	to the frame is actually very nice, thin slivers of the tangs being ever so			{ANTIQUE} (3000/5000)
	slightly proud. The lower tang is appropriately stamped "10397"			Est. 3,000 - 5,000
	matching the barrel, and the barrel and barrel sleeve show matching		173	Smith & Wesson No. 3 Second Model Russian Revolver with Japanese
	assembly number "3383". The original sights are intact (the rear sight		-	Navy Markings
	sans slider retention screw) and the action seems to function well			serial #2443, 44 S&W Russian, 7" ribbed round barrel with a bright very
	mechanically. Oliver "O.C." Hansbrough is recorded as a claimant in a			good plus bore showing a few small areas of light pitting or oxidation
	list of patented mines from a survey of 1881 with a survey name of			nearer the breech and otherwise crisp rifling throughout. The metal
	"Seven Up" and it appears a number of his relatives were occupied in			surfaces of this revolver retain about 20% original bright blue, mostly
	the mining business over a period of time. Hansbrough later served as			present along the frame, with the barrel, cylinder and balance of the
	sheriff of Boulder County from 1887-1889 as well as superintendent of			frame toned to a pleasant deep plum brown patina showing some
	District 1 of the Sheriff's Association of Colorado. Hansbrough passed			scattered light dings or minor tool marks mostly along the frame. Some
	away in 19 05 and is buried alongside his wife in Boulder's Columbia			of the screw holes show circumferential wear, the screw heads show
	Cemetery. This is an attractive Henry rifle that has seen some use and			light slot wear and a few are period replacements and the hinge pin is
	remains a nice honest example. (13G9670-403) {ANTIQUE} [David &			an effective period replacement with slotted head. The triggerguard and
	Lore Squier Collection] (15,000/25,000)			hammer show remnants of silvery case-hardened patina and all of the
	Est. 15,000 - 25,000			markings remain intact and strong, the barrel address with reissue
71	Smith & Wesson No. 3 Third Model Russian Commercial Revolver			patent date is quite crisp and the bottom of the frame is stamped with
	serial #1077, 44 S&W Russian, 6 1/2" ribbed round barrel with a			the appropriate Japanese anchor. The smooth walnut grips remain in
	fair-good bore showing some moderate oxidation and light pitting			very good condition having darkened somewhat from the years showing
	throughout with otherwise good rifling. The metal surfaces of this			some scattered light dings and the right panel shows a moderate
	revolver retain about 80% original nickel finish with most of the flaking			internal crack and is warping slightly. The right panel is stamp-numbered
	along the left side and gripstraps toning to a mottled gray patina with			"2457" and the barrel, latch and cylinder are mismatched from the frame
	some smoothed-over light pitting, some scattered fine scratches and			but still no doubt from a Japanese revolver as they are numbered quite
	handling marks. The screw holes show some light circumferential wear			close "2545". Barrel-to-frame fit shows a little bit of play, the lanyard ring
	and the heads have light slot wear but this is relatively minor. The			is intact and the action seems to function well mechanically with solid
	triggerguard has mostly toned to a mild plum-brown patina showing a			timing and lock-up. A very good example of these desirable Japanese
	few flakes of silvery case-hardened patina while the hammer shows			contract Smith revolvers. (13C9815-1) {ANTIQUE} (2000/3000)

The metal surfaces of this revolver retain about 85-90% arsenal quality refurbished rust blue showing high edge and holster wear, gripstraps thinning to gray patina, some overall light to perhaps moderate dings and a few sparsely scattered pinprick pits. The screw holes show moderate circumferential wear and the screw heads show light slot wear. The triggerguard and harmer are toning to a silvery case-hardened patina, the harmer with generous vibrant colors throughout. The barrel address with reissue date remains completely intact and strong and the rear barrel rib is stamped with a Japanese military proof. The smooth walnut grips remain in about very good plus condition having darkened from the years with a couple light dings and mild handling marks. The right panel is stamp-numbered "5087", the barrel is numbered "6794", cylinder "2958" and the latch is matching the frame. Barrel-to-frame fit shows a hint of very minor play, the lanyard ring is intact and the action seems to function well mechanically with solid timing and lock-up. A solid
	address with reissue patent date remains crisp and clear and the butt is stamped with a small "P" and boxed "1874". The smooth antique ivory grips remain in very fine condition taking on a mellow patina and showing some very slight shrinkage and crackling along the base of the left panel. The right panel is numbered "10972" in antique ink. The topstrap cylinder retainer plate is missing and the serialized parts are matching. Barrel-to-frame fit shows a little bit of minor play, the lanyard ring is intact and the action seems to function well mechanically with excellent timing and lock-up. A solid third model commercial Russian for the Smith & Wesson collector. (13B9815-4) (ANTIQUE) (1800/2200)			serial #7217, 44 S&W Russian, 7" ribbed round barrel with a bright very good plus bore showing a few sparsely scattered areas of light pitting with otherwise crisp rifling throughout. #### Lot Title/Description

Lot Title/Description

175 Lovely Engraved Peabody Martini Long Range Creedmoor Target Rifle serial #226, 44-100, 32" part round part octagon barrel with a bright excellent bore. This rifle features Zettler rifling which has a narrow groove cut down the center of each land. The top of the barrel bears proper "MANUFACTURED BY THE PROVIDENCE TOOL COMPANY PROVIDENCE, RI U.S.A." address which remains crisp. The rifle is in the traditional Creedmoor configuration and has special animal scene engraving on each side of the action. The action shows finely punchdot shaded relief floral scroll with shell motifs and large open panels at the center. The right panel shows three bison, one large in the foreground walking and two in the background running. The left side shows a large portrait of a bison head at center. The engraving is very detailed with small whiskers visible and you can count the teeth in his mouth. The barrel is engraved with scroll at the breech along with "44 CAL. / 100 GRS." and the top ring of action is engraved in gothic letters "Creedmoor". The condition of the rifle is lovely with the barrel retaining 95% original blue overall with some light silvering on the high edges. The action shows perhaps 80% original color case-hardened finish which has faded to a mottled smooth pewter with subtle colors visible throughout. All markings in metal remain clear and legible and the engraving remains crisp. The outside bow of the triggerguard is engraved "PEABODY & MARTINI PATENTS". The checkered pistolgrip buttstock and forend rate excellent with lots of original finish remaining and with sharp checkering. The checkering is in the fancy pattern with finer cut checkered panels within the checkering on the forend. The forend tip is of iron and shows some faded old color case-hardening. The rifle is sighted with its original windgauge front with spirit level which is marked on front "PROVIDENCE TOOL CO.", there is no provision for a rear barrel sight and the original long range folding tang mounted peepsight is present, a second base is mounted on the top of the comb just ahead of buttplate, both bases are original and numbered to the gun. A beautiful example of these unusual and scarce American target rifles. (1E9670-18) {ANTIQUE} [David & Lore Squier Collection] (8000/12.000) Est. 8,000 - 12,000

Ornate German Percussion Jaeger Rifle by Morgenroth 29" ribbed and rounded octagon barrel with a bright excellent bore. This is a very interesting and very finely-made Jaeger rifle. The barrel was octagonal its full-length, but each flat has been reduced and a radius incorporated its full-length, leaving the sharp edges of what were once the octagonal flats as raised ribs, again running the full-length of the barrel. The treatment is very pleasing it would've taken an incredibly long time to do in the pre-industrial age-era. The barrel itself is a pewter gray patina showing damascus twist pattern its full-length with interspersed sprinklings of light oxidation staining here and there. There are gold inlaid bands at the muzzle, a simple German silver front sight in dovetail, nice adjustable u-notch rear sight and gold wire scroll inlay, with a thicker gold band at the junction of the breech plug. "Morgenroth in Gernrode" is inlaid in gold atop the rear barrel flat, the only portion of the barrel which was not rounded, and the breech plug and long tang show exquisite quality open foliate scroll with a chamois in a mountain scene on the tang proper. The nipple bolster is graceful with a dual recurving flared while the lockplate shows the same exquisite flowing scroll with a recumbent rhebok in a mountainous scene, scroll and filiaree gracing the hammer, which shows a gold eve on its right side, in a somewhat dolphin-like motif. The lockplate is dual-acting and features a pivoting hammer rest in addition to the normal half-cock stop present within the lock. There are two simple iron ramrod thimbles and a nicely engraved tailpipe and the smooth steel buttplate shows quality engraving along its tang. The triggerguard and its front extension are ornately carved horn showing a pineapple and scroll finial with a checkered bow and smooth forward-curving grip spur, showing some age cracking from drving here and there, which remains tight and will not flex, and certainly was not damaged from use but merely drving from the years. The rifle is stocked in a nice grade of what is likely French walnut, the stock rating very fine with much original varnish, the expected light handling marks, a small bite mark from a vise on the right side mid-stock and a duffel cut 7" from the horn forend tip. Interestingly the arm was constructed with both left and right side cheekpieces and the beautifully checkered wrist is accented by open flowing carved scroll which continues at the rear of each flared shadowline cheekpiece. The nicest amenity on the rifle is its slightly pendulum-shaped patchbox which shows excellent quality open foliate scroll with rococo bordering and a game scene vignette at its center showing a large Eagle preying on a rhebok, amidst a mountainous backdrop. The interior of the compartment is lined in green felt and the underside of the lid is polished to a true mirror finish. The lock functions properly and the arm is equipped with double set triggers, there is a base atop the tang for a diopter sight which is sadly no longer present. The duffel cut could be made to go away by a wood man who knew his business or with the addition of a horn insert which would act as an accenting stripe and be rather pleasing, matching the horn tip. Morgenroths were a gunmaking family in Gernrode as early as 1690, this rifle being percussion would likely be the third of the Gernrode Morgenroth's active sometime into the 1850s according to Stockel. This is a very handsome and very ornate rifle, clearly made for the hunting lodge of some nobleman or merchant of means, the dual cheekpieces meaning either left or right handed shooters could "borrow" and use the rifle afield. (3D9670-47) (ANTIQUE) [David & Lore Squier Collection] (3000/5000) Est. 3.000 - 5.000

Lot Title/Description

Attractive Belgian Jaeger Style Schuetzen Target Rifle by Lardinois .44 cal, 25" round barrel with full-length integral rib and recessed muzzle for starter, showing a bright excellent bore. The barrel shows strong remnants of a lovely bright blue finish, most prominent in the protected area at the muzzle, the balance a very pleasing bright and gray-blue patina, showing a sparsely scattered light oxidation stain here or there, but remaining smooth and brilliant overall. There is a simple bead-style dovetailed front sight beneath the generous front sight hood, the rear sight is an elevation adjustable v-notch with flip-up aperture leaf and the graduations to 500 meters, and there is a diopter style aperture sight in place on the tang with a very generous screw-off aperture. The top flat features a prominent gold inlay of the Liège Perron with "L" and "G" flanking, with the makers name beneath "NC/Lardinois/1852". The long tang shows the very lightest foliate and floral engraving and is a smoky gray case-hardened patina as-is the stepped lockplate which shows the same very light, simplistic open foliate and rococo scroll which continues onto the hammer. The ramrod thimbles are simple bulbous affairs with dual medials, and the bottom metal is a full-length rib which runs from the tailpipe to the toe of the smooth steel buttplate, showing some light engraving and remnants of a bright fire blue, with light pitting nearer the toe. The ornate Schuetzen style triggerguard shows light engraving on the bow and has three finger grooves with a rearward grip swirl. It is actually hinged, with a threaded catch at its rear, this allows access to the adjustable double set target trigger beneath. The full-length Jaeger-style stock rates near very fine with much original varnish and overall very light dings and handling marks. It shows some coarse checkering in the area of the wrist and has a nice flared left side shadowline cheekpiece and horn forend tip. The lock is actually hand-detachable, the wing-shaped and lightly engraved sideplate has a somewhat bulbous trefoil at its center, which actually hinges-up and is the head of the lockplate screw, the plate hand-detaching to the right. What is likely the original ramrod is present as-is a loading rod with brass tip, collar and knob which fits the counter bore at the muzzle precisely. Nicholas C Lardinois was active in Liège roughly 1850-1865. This is a very finely-made target rifle that no doubt would perform extremely well off the bench with its lovely bore. (3C9670-101) {ANTIQUE} [David & Lore Squier Collection] (2000/4000) Est. 2,000 - 4,000

Ornate Austrian Reverse Action Percussion Schuetzen Rifle by Bartusch
About .48 cal., 33" barrel with a very fine bore which shows sharp rifling
but with minor oxidation, primarily within the grooves. The barrel is a
pewter and plum brown patina showing evidence of a one-time pale blue
finish, with some spots of light oxidation staining here and there and a
few minor handling or tool marks. The top flat was neatly matted its
full-length and the muzzle is very slightly swamped, the makers name is
inlaid in gold near the breech "F. Bartusch in Wien" with deep etching on
the left and right diagonal flats "Aus Eisenwaffa Gebohrter Lauf" (loosely
iron barrel/drilled bore) with some light geometric gold line engraving at
the junction with the engraved hooked breech plug. The front sight once
had a scant iron bead which now has gone missing, the rear sight with a
very shallow v-notch flat-top, adjustable for windage, with an iron
slip-over sunshield. The hooked breech shows open flowing scroll and a
Roman gladiator with the tang showing full scroll coverage with an effigy
of the green man and with a windage and elevation adjustable aperture
sight. The rearward-acting lock has open flowing scroll with filigree
bordering and the makers name in riband, the front showing the left-side
view of a reclining fellow sans his clothing, a lion's head near his feet, he
seems to have some manner of fowl by the neck. The hammer shows
light engraving and the generous percussion cap deflector shows the
same quality open flowing scroll. The arm features very heavy furniture
with a cast-in-relief front extension with an urn and floral motif, a bit of
light engraving on the rear of the triggerplate, and a heavy cast-in relief
toeplate showing the huntress Diana with her hound and bow. The
Schuetzen-style iron fingergrooved guard features a single
rearward-curving flourish, and there is a very heavy cast-in-relief
buttplate with oakleaf and acorn motifs, boar's head right with the deer
head left and a small owl on the recurving toe; all the hardware is a
tarnished pewter patina. The French walnut stock rates fine with the
expected light dings and handling marks that come from the years and
shows some exquisite relief scroll to the right rear of the comb and there
is a carved dragon thumb rest to the rear of the lockplate. The left side
features a very generous scooped shadowline cheekpiece
beneath-which is more open flowing carved-in-relief scroll with
background stippling, the rear seat of the triggerguard as well with bold
flowing open scroll. There is a diminutive iron cap box along the toeline,
neatly engraved with gold inlaid letter "S", this same initial is on the
removable rear sight sunshade, in addition to an engraved depiction of
Mr. Sun himself. The barrel is keyed with a single wedge and there is a
somewhat scalloped tip of the forend, it would appear as though there
was perhaps thought of including a ramrod in the nose of the stock, as it
shows a very well-done plug there, no doubt by the maker, and the left
stock flat shows a 5" crack which does not flex. The arm is equipped
with a rear set trigger and a very fine hair front and seems to function
properly mechanically. (3D9670-307) {ANTIQUE} [David & Lore Squier

Lot Title/Description

179 New York Patent Breech-Loading Percussion Halfstock Sporting Rifle by Reynolds .40 caliber, 32" octagon barrel with patent Reynolds chamber and a bright very fine bore which shows strong rifling and just a bit of a very sparsely scattered very light oxidation. This is a very interesting rifle from the era of breech-loading experimentation, and uses a separate patented "chamber" or "cartridge", very similar to a Maynard cartridge, made of steel with a vent hole in the center of its base. An innovative design, it would've allowed the sportsman to carry a number of loaded charges afield, ready for a moments reloading should it be necessary. Rifle is sighted with a simple diminutive blade front sight and a three leaf rear, one standing, two folding, with shallow u-notches. It is maker marked on its top flat "F Reynolds New York patent", the barrel a dull pewter gray with minor oxidation staining here and there and with light engraving on the breech frame, breech block and long tang, the frame with inlaid bands of silver front and rear. The back action lock and hammer show some light engraving, with open scroll on the plate, maker marked at its rear and showing some nice silvery case-hardening. There is a pewter or German silver forend tip, German silver tailpipe with light engraving, German silver flat-bottom triggerguard, showing the remnants of an old spring riveted to its base (the purpose of-which is unknown). There is a nice engraved pendulum style patchbox which was once flip-up, showing an old repair and conversion to length-wise flip-open (rear-to-front opening rather than vertically) with a running hare on the face. There is light engraving on the tang of the steel crescent buttplate and there are German silver inlays on the left of a recumbent deer, spread-winged eagle and light scroll side plate, none of these however are engraved. The American black walnut stocks rate very good with much original varnish, a nice left-side cheekpiece, mullered border checkering pattern and the expected light dings and handling marks that come from a hunted arm. The mechanism and lock function as-designed, the arm is maker-equipped with sling eyelets and the original ramrod is included. Francis Reynolds was active in New York City until the mid to perhaps late 1860s, this very gun is pictured on pages 416-7 of The New York State Firearms Trade © Rowe. A very well-made gun with an ingenious auxiliary chamber which would have allowed for quick reloading. (3C9670-26) {ANTIQUE} [David & Lore Squier Collection] (2000/3000) Est. 2,000 - 3,000

180	Rare Factory Engraved Sharps Model 1853 Sporting Rifle Presented to New York Businessman and United States Congressman James M.
	Marvin
	serial #9404, 60 bore (.44 caliber), 25" barrel with a deeply rifled bore
	that shows pitting. This rifle is listed in factory records as "Fine
	Engraved" which is the second highest of the four levels of engraving
	offered. The frame and hammer show full coverage punch dot shaded
	scroll engraving. Also showing heavy engraving are the triggerguard,
	patchbox, buttplate tang, barrel breech and there is an engraved border
	at the muzzle as well. The left side of the stock shows a shield shaped
	silver presentation plate which is engraved "Presented to / James M.
	Marvin / by / M.D.B. / New Years / 1855". The rifle is equipped with its
	original adjustable double set triggers which seem to set and trip
	properly however the hammer does not hold on cock or half cock. The
	condition of the rifle is quite nice with the barrel showing an even gray
	brown patina with the high edges showing more gray and with some
	scattered light pitting. The barrel address remains clear and fully legible.
	The action is a pleasing brown patina overall with some fine pitting
	which is confined mostly to the top surfaces of the action to the front and
	rear of the breechblock. The engraving is in very full coverage leaving little room around the factory markings which all remain clear and fully
	legible. The walnut stocks rate very good plus with a lot of original finish
	remaining and with normal light handling marks. There is some light
	chipping just ahead of the action on the bottom of the forend, the pewter
	forend tip is in place and shows a lovely patina. The patchbox and other
	furniture show a pleasing even brown patina with some scattered light
	oxidation staining but they remain quite smooth. The presentation
	plaque shows a wonderful undisturbed rich tarnished patina overall and
	it fits very nicely. The rifle is sighted with its original folding rear barrel
	sight and a modern globe front. James M. Marvin was born in Ballston
	New York in 1809 and moved to Saratoga Springs in 1828 where he
	engaged in the hotel business. By 1839 he was a proprietor in the grand
	United States Hotel in Saratoga Springs. He was a member of the Whig
	party and was a representative in the New York Assembly in 1846. He
	went on to be a three term Republican Congressman serving during the
	end of the Civil War from 1863 to 1869. He later founded and served as
	president of the First National Bank of Saratoga Springs, he also served
	as a director of the Schenectady and Saratoga Railroad as well as the
	New York Central Railroad. The identity of the presenter "M.D.B." is
	unknown. More diligent research could uncover the identity of the individual, clearly they were a person of means at the time it was
	presented. In addition to confirming the engraving on this rifle, the
	factory records show the rifle shipped on December 12, 1854 just 20
	days prior to the presentation. There were only 53 of these 60 bore
	engraved 1853 sporting rifles ever made. A rare, fine and desirable
	factory engraved presentation Sharps sporting rifle worthy of the finest
	collection of Sharps arms. (1F9670-230) {ANTIQUE} [David & Lore
	Squier Collection] (10,000/15,000)
	Est. 10,000 - 15,000
181	Fabulous Sharps Second Model Pistol Rifle
	serial #394, .38 caliber, 28" round barrel with a bright excellent bore.
	This pistol rifle is completely original and remains in extremely fine
	condition. The left side of the frame is marked "C. SHARPS & CO.
	PHILADA PA" and the rifle has all-matching numbers on frame,
	breechblock, opening lever, barrel, rear sight and on the inside toe of
	buttplate. The barrel retains 95% lovely even original brown finish. The
	frame retains 95% original color case-hardened finish which has
	softened but remains visible overall. Some protected areas show
	brighter color but the overall surface and appearance of the frame is
	wonderful. All metal surfaces remain smooth and free of pitting. All
	markings in metal remain clear and legible and all screwheads remain
	markings in metal remain clear and legible and all screwheads remain clean and undamaged. The walnut buttstock and forend are equally as
	markings in metal remain clear and legible and all screwheads remain clean and undamaged. The walnut buttstock and forend are equally as nice as the metal with 95% original finish remaining, nice raised grain

182 Extremely Fine Remington No. 7 Rolling Block Rifle serial #300129, 25-210 Stevens RF, 26" part round part octagon barrel with a bright excellent bore. These rifles were made from left over 1871 Army Rolling Block pistol frames and with a total production of about 350 rifles, they rank among the rarest of the Rolling Blocks. This example remains in a very fine state of preservation. The barrel retains 98% original blue finish overall with markings remaining crisp. The frame shows 95% vivid original color case-hardened finish with markings remaining visible but a little light in areas, the original "P" and "S" marks are faint but there. The hammer and breechblock show 97% original blue and all screw slots remain clean. The rifle is equipped with English walnut checkered pistolgrip buttstock and schnabel tipped forend with ebony insert. The stocks show nice figure and are as crisp as the balance of the gun with 97% original finish remaining and with crisp checkering and just a few light normal handling marks. The original checkered hard rubber buttplate and scalloped grip cap are both in place and rate excellent with no chips. The rifle is sighted with a lovely gold washed Beach combination front and a Lyman folding peepsight mounted on rear of frame. An extremely fine No. 7 rifle for the Remington Collector. (1C9670-128) {ANTIQUE} [David & Lore Squier Collection] (6000/8000) Est. 6,000 - 8,000 183 Rare and Fine Percussion Buggy Rifle by Morgan James of Utica, New York .28 caliber, 14 3/4" part round part octagon barrel with an excellent bore. This is likely an extremely early Morgan James rifle built shortly after he returned to Utica and setup shop around 1841. The gun features an external lock made by Wyllys Avery in Salisbury Center, NY approximately 25 miles from Utica. The rifle also is built with a Remington barrel which is marked on the bottom flat "REMINGTON": Ilion is about 11 miles from Utica. The lockplate is marked "AVERY" beneath the top leg of the mainspring, Avery was active between 1820 and 1850. The top of the barrel is marked "M. JAMES / UTICA NY.". The condition of the rifle is fabulous with the barrel retaining about 95% original browning with most loss in breech area where there is also some oxidation staining and some salt & pepper pitting. The lock shows muted color case hardening overall showing darkening mottled color. The walnut stock is very finely made with a pewter forend tip, brass buttplate and finger spur triggerguard and a silver inlaid running dog on the left side center of butt. The sideplate is silver with stylized wings and the elongated octagonal wedge escutcheons are also of silver. The wedge passes through a dovetail cut in the bottom of the barrel rather than an underlug. The stock rates excellent plus with tons of original finish, beautiful crisp edges and the furniture all fits perfectly. The rifle is sighted with a simple dovetail mounted blade front and a lollipop tang mounted peepsight; there is no provision for a rear barrel sight. Morgan James was one of the most accomplished 19 century New York makers, this is a fine, early and very unusual example. The rifle is illustrated in Swinney & Rowe's The New York State Firearms Trade book, they call it an Avery style lock, they were on the right track but apparently didn't see the AVERY marking which is obscured partially by the mainspring. A lovely little rifle for the antique American arms collector. (1D9670-109) {ANTIQUE} [David & Lore Squier Collection] (3000/5000) Est. 3,000 - 5,000

Rare L.L. Hepburn Four Barrel Swivel Breech Percussion Rifle .32 cal, 22" four barrel cluster showing bright about excellent bores which may have a bit of light oxidation here and there. This is an absolutely wonderful swivel breech "double rifle" with two barrels top and two barrels bottom, made by famous gunsmith Lewis L. Hepburn, among other things, mechanical department superintendent at Remington Arms Co. and Hepburn action fame, and very much mirrors examples known by M. J. Whitmore of Potsdam, New York, with-whom Hepburn worked early in his career. The barrels retain perhaps 95% of a very pleasing plum brown, which is likely original to the arm, showing minor fading along the high edges and at muzzles, along with some very minor oxidation staining here and there that come from the years and a field-used arm. Both sets of barrels have a silver blade front sight and a scant v-notch rear, the "top" set marked "LL Hepburn/Colton NY". There is a slightly sculpted barrel catch on the underside of the barrel frame which contacts a simple square notch cut into the barrel assembly, allowing it to pivot for firing of the lower set of barrels. The barrel frame and back action locks are a mix of fading plum brown and pewter gray patina and show only the slightest wavy-edge borderline engraving. The arm is nicely appointed with German silver furniture having a flat-bottomed single spur triggerguard with a simple rearward grip flourish, the bottom of-which is neatly metal checkered. The crescent butt and toeplates show very light wavy borderline engraving as does the pendulum-shaped patchbox on right of butt, the lid with a loose fleur-de-lis-style. The left side of the butt shows a stylized German silver inlay of intertwining open flowing scroll of very simple character but extremely well done. Perhaps the most interesting feature of the rifle is the trapdoor muzzle which stores the arm's ramrod at the center between the four barrels. The arm is stocked in a nice grade of American black walnut with some very nice grain figure in the area of the butt. The stock retains nearly all of its original varnish, along with minor dings and handling marks here and there, a couple of areas have been affected by some manner of solvent over the years which has darkened the finish, it still remains in very fine condition. The hammers are in-time and the locks function well mechanically, each of the hammers has the edge of its double skirt chipped out, doubtless from someone attempting to turn the barrels with the hammers in the down position. LL Hepburn was mechanically very gifted and a holder of many patents and did work for both Remington and Marlin in his day. Having a rifle constructed by him is a wonderful piece of firearms history, not to mention the quality of the arm itself. 185	Fabulous Percussion Three Barrel Combination Gun by George H.
	Ferriss of Utica, New York 40 caliber rifled barrels over .78" smooth bore, 30" barrels all with bright
	excellent bores. This is a very finely crafted combination gun made by
	this well-regarded central New York maker who was partners with
	Morgan James for a number of years during the early to mid 1850's.
	This gun is built on a design that is generally credited to James with
	lobes on either side reaching back into the stock and with a lateral
	tapered takedown pin present. The double rifle barrels are service by traditional double triggers with the rear trigger (left barrel) being a set
	trigger and with the smoothbore trigger being a simple underhammer
	type which sets directly on a notch on the hammer itself. The top of the
	barrel breech between the hammers is marked "G.H. FERRISS / UTICA
	/ N.Y.", this appears to be the only marking on the gun. Each side of the
	barrels have a 9" ramrod housing with two thimbles ahead of each. The condition of the gun is wonderful with the rifle barrels retaining 90%
	original brown finish overall blending with a smooth brown patina. The
	shotgun barrel retains a similar amount of finish with damascus pattern
	visible along most of its length. The frame and barrel breeches retain
	95% original color case-hardened finish which is quite vivid in areas and
	has a lovely appearance. The checkered walnut stock is of a nicely
	figured piece of American black walnut and shows crisp checkering on the wrist. The right side of the butt shows a round iron patchbox which
	retains vivid original color case-hardening, the iron buttplate is finished
	in the same manner with colors slightly more muted. The iron toeplate
	has a slightly convex shape at its front, very typical of Morgan James
	and George Ferriss arms. The flat toeline of the stock shows a 2 1/2"
	long oval monogram plate which remains unengraved. The condition of the stock is excellent except for some finish peeling on the right side
	where there is also some crazing. The gun is sighted with a globe front
	and elevator rear barrel sight, both of which are original. The gun has
	two ramrods, a hickory rod mounted on the left for the rifle barrels and
	rosewood on the right to service the smoothbore barrel. This gun is
	illustrated and discussed in Swinney's The New York State Firearms Trade on page 619. The author's comments are as follows: "Three
	barrel combination gun with two rifle barrels over one smoothbore. The
	rifle is in nearly new condition.". A wonderful gun for anyone who
	appreciates American percussion sporting arms. (1F9670-75)

186	Rare and Unusual Three Barrel Percussion Sporting Rifle by HV Perry
	.36 cal, 28" three barrel cluster with bright excellent bores, perhaps
	showing a few spots of light oxidation here and there. The barrels
	remain quite nice showing much original browning, with some light
	flaking and toning to a pewter patina beneath, showing a bit of muzzle and high edge wear. Each of the barrels is maker marked "HV
	Perry/Jamestown/NY", each of the ribs in between stamped "Cast
	Steel". Additionally each of the barrels is neatly numbered at its breech
	1-3 and each barrel has a small simple blade front sight adjustable for
	windage. The barrel frame, long tang and both side and lock plates are
	a pleasing mottled pewter case-hardened patina with very light open simple foliate engraving, which continues onto the hammer. The tang
	has been maker drilled and tapped for a heart-shaped aperture sight
	which can also act as an open sight utilizing the v in its top surface. The
	barrel catch is a very nice spring-loaded button with stippled face,
	mounted at the rear of the tang, when pressed to the rear the barrels
	can be rotated until they lock in place. The arm features German silver
	hardware with a nice single spur triggerguard with a rearward grip flourish, crescent style buttplate with a steel insert at the heel and a
	simple toeplate. The rifle is stocked in a nice grade of American black
	walnut with much original varnish and rating very fine to perhaps
	excellent, with a couple darkened spots left and right, perhaps from
	some solvent. The patchbox is a nice pendulum shape and is
	unadorned. Perhaps the most endearing feature of the arm is the center-mounted ramrod which rides at the center of the three barrels in a
	hollow tube of its own. Included with the arm is an antique hand-made
	softwood carry case, stained and varnished a dark walnut on its exterior,
	with simple leather strap carry handles and keyed lock (key included).
	The case rates good to perhaps near very good with the expected
	overall light dings, scratches and handling marks from the years. It
	shows small dividers on the interior which would house the rifle, perhaps cleaning implements and any of the loading apparatus you may need; its
	Toleaning implements and any of the loading apparatus you may need; its
	fit is decent for a country-made case. This very arm is pictured in the

	monumental set The New York State Firearms Trade © 2003 Rowe, on page 1271 of Volume 3 and nicely photographed. Perry lived in Danville, Freedonia and finally Jamestown New York, where he eventually passed away in 1897. The arm seems to function well and remains in
	monumental set The New York State Firearms Trade © 2003 Rowe, on page 1271 of Volume 3 and nicely photographed. Perry lived in Danville, Freedonia and finally Jamestown New York, where he eventually

	Sons
	serial #856, .48 cal, 29 1/2" octagon barrel with a bright about excellent
	bore which shows perhaps some sparsely scattered very light frosting,
	primarily within the grooves. The barrel shows a very nice contrasting
	darker gray-brown, light gray swirled damascus pattern its full-length,
	fading to pewter at the muzzle and on the sharp edges and contact
	points, the rear showing a few spots of sparsely scattered oxidation
	staining. The rifle was sighted with a simple bead front sight, there is
	currently only the base of that sight left, it would appear as though the
	top "bead" portion snapped off many years ago, now only an inverted
	"V" remains, there is a u-notch rear with platinum index line, the base
	graduated to 400 yards and flip-up adjustable ladder sight graduated to
	4800 yards. The top flat is maker marked "Geo Forrest & Sons Jedburg"
	and the rebated breech shows some smoky color case-hardening with
	excellent quality tight flowing scroll atop, a platinum blowout plug at the
	breech with a flared right side bolster. The lock and tang are a pewter
	gray patina and show the same exceptional quality tight flowing English
	scroll, the lock with light borderline engraving and makers mark in riband
	"Geo Forrest & Sons". The hammer shows an engraved dolphin nose
	and actually shows an old repair to the spur which is so well done it is
	missed at first glance, the lock is fitted with a sliding safety. There is a
	simple tailpipe and the triggerguard and its front extension show the
	same near full coverage excellent quality scroll, this continuing on to the
	domed steel pistolgrip cap and tang of the smooth butt. English walnut
	stock rates fine with sharp edges good flat-top checkering with mullered
	borders and the expected overall light dings and handling marks that
	come from a field-used arm. The lock functions well mechanically and
	what is likely an original bone-tipped ramrod is present. There are some
	minor peen marks on the right diagonal flat near the makers marking, a
	top-notch metalworker who knew his business could doubtless peen
	them back down and make them far less noticeable, they are not that
	obtrusive to begin with. George Forrest was evidently active in Jedburgh
	, , , , , , , , , , , , , , , , , , ,
	from around 1825 to perhaps 1885. This is a handsome, Scottish-made
	rifle and with its nice bore would likely perform amiably with the proper
	loads worked up. (3C9670-34) {ANTIQUE} [David & Lore Squier

Beautiful British Percussion Single Barrel Fowler by Edge serial #1340, 16 bore, 29 1/2" barrel with Rigby flats at its rear and a bright fine bore which shows some scattered light oxidation or perhaps the widely scattered sparse light pit here and there. The barrel is lovely showing a three tone brown and pewter damascus twist pattern its full-length and features a simple brass bead front sight. As-mentioned there are Rigby flats at the rear and a rebated hooked tang breech with gold tone blowout plug and simple engraved gamebird. "John William Edge" is engraved on the top flat and there is a single gold inlaid band at the rear, the tang showing lovely quality tight flowing English scroll. The lockplate shows some strong remnants of original color case-hardening with nice banknote filigree bordering and excellent quality flowing scroll front and rear with gamebirds at its center along with the makers name; the nice filigree and engraving continues on the hammer, the nose engraved in a dolphin-head. The balance of the iron surfaces show remnants of bright blue or are smooth brown and pewter patina. The tailpipe shows light scroll engraving, the front extension lightly chiseled with exquisite engraving, which continues onto the bow of the guard and long tang of the butt. The English walnut stock rates very fine to near excellent, with light handling marks and much original varnish. It features a horn forend tip with coarse checkering at the grip and forend with nice mullered borders, there is an oval silver monogram plate atop the wrist engraved "FWW". The lock is crisp and mechanically functional and the length of pull to the smooth steel butt is 14". What is likely the original ramrod is present and there are very light bite marks from a vise at left and rear flat of breech plug but they are missed at first glance. A very beautiful single barrel British fowler in a very fine state of condition from this respected maker. (3B9670-97) {ANTIQUE} [David & Lore Squier Collection1 (1200/1800) Est. 1,200 - 1,800

Lot Title/Description

Extremely Rare Freund Alteration of a Sharps Model 1877 Rifle 40-90, 26" part round part octagon barrel with a near excellent bright bore. This is an extremely handsome rifle that has a very storied history. There are only 8 known Freund conversions using this model Sharps, which is perhaps the most handsome model of the Sharps line. This rifle features Freund's cam action breechblock, double extractor, hammer and sights. The lockplate is engraved with scroll and at center "FREUND'S PT. / WYOMING ARMORY / CHEYENNE WYO. T. U.S.A.". The frame is also engraved in lovely scroll with the right side of the frame engraved "R. Ashworth" and the left "Freund's / American / Frontier". This rifle was once part of John Amber's collection and images of the rifle appear in an early edition of Cartridges of the World as well as in the 1958 edition of Gun Digest. The rifle was in Amber's shop when it burned, reports are that his wife who suffered from mental illness set the fire. The rifle was recovered after the fire and all metal parts were placed in kerosene to stop the effects of the fire. The stocks were burned away and the sideplate and buttplate were missing. This is all documented in Pablo Ballentine's Freund & Bro. Pioneer Gunmakers to the West where the rifle is also illustrated in both color and black and white and discussed in detail including background information on R. Ashworth. When Amber received the rifle the name "R. Ashworth" had been defaced presumably by a period owner. After the rifle was acquired by Ballentine, in its post-fire condition, he sent it to Ed Webber of Big Timber Montana who is a well-respected gunsmith who actually built 1877 Sharps rifles. Mr. Webber was able to plane away tiny layers of the defaced metal and taking smoke tracings at regular intervals. Eventually he was able to decipher the letters so that this could be restored. The engraving on the rifle was executed and/or refreshed by none other than Lynton McKenzie. Webber also restocked the rifle which are the stocks that are seen in Ballentine's book which were more blonde in color. The current owner took the rifle to renowned gunsmith Warren Sellke in Colorado and had what he felt were a more appropriate set of stocks made for the rifle. They are of beautifully figured American Black walnut with rounded pistolgrip, horn schnabel tip and a beautifully made checkered steel buttplate with sliding trapdoor compartment. The condition of the rifle is fabulous with the barrel retaining 98% lovely rust blue finish with "FINE CAST STEEL" being boldly engraved on the top breech section. The frame and lock show 95% wonderful color case-hardened finish which has been expertly softened to show proper age, really a wonderful color case-hardening job. The lock shows slightly more softening in area where the shooter's hand would make contact. The breechblock pin shows light engraving with nicely sculpted tip. The rifle is equipped with adjustable double set triggers and original Freund sights. The front sight is engraved "F.W. FREUND'S PATENT", the rear barrel sight is engraved "Freund's Pat 1880". The stocks are expertly made and show crisp checkering and 98% hand rubbed oil finish. Richard Ashworth immigrated from England to Powder River, Wyoming in 1881 seeking his fortune as a cattle rancher. Ashworth purchased herds of cattle from Oregon and Nevada and later took on a British partner named Johnson. The two would become prosperous cattlemen and would return to England in the early 1890's. Ashworth would apparently return to the U.S. but we assume this rifle was sold or given away when he left in the 1890s. Freund altered rifles are very rare, highly sought after and are prized by those collectors fortunate enough to own them. They are the epitome of the Western Frontier rifle and today conjure up images of days past when well-to-do gentlemen would hunt buffalo on the plains. While these rifles do not trade often when they do, they are regularly trading in the six figures, even the more common 1874 Freund Converted rifles, of which there are far more known than these ultra-rare 1877 rifles. Many of these rifles are traded among private collectors who covet them and long for an opportunity to one day become their caretaker. This opportunity to purchase one at public auction is rare and should not be overlooked as your next chance at one could be 20, 30, 40 or more years down the road. A truly fabulous American rifle, once part of the celebrated John Amber collection and painstakingly restored to its current glory by true scholars of the subject and world class artisans. (1F9790-67) {ANTIQUE} [Bob Borcherdt Collection] (25,000/50,000) Est. 25,000 - 50,000

release spring button is missing, but these would be an easy repair. Still a rather respectable example of an early British blunderbuss with

German MG 34 Light Machine Gun by Brno with Lafette Tripod 8 Accessories serial #842a, 8mm Mauser, 24" barrel with a mostly bright very good plus bore showing some light oxidation in the grooves and strong rifling throughout. This dot-coded and 1942-dated machine gun shows matching numbers on the receiver, barrel shroud and buttstock, with the remaining parts showing a mix of numbers, maker-codes and Waffenamts. The metal surfaces retain about 90% arsenal refurbished blue with most of the loss due to some areas along the rear receiver, gripstraps and triggerguard toning to a mild gray patina, some light high edge wear and scattered areas of blued-over light pitting. The dot code and 1942 date on the barrel shroud are very faint from refurbishment while the other markings remain intact and quite strong. The black grooved Bakelite grips remain in very good plus condition showing some scattered light handling marks and the left panel with a few tiny chips along the top edge. The dark brown smooth Bakelite buttstock is similar showing some overall light scuffs, some minor dings along the edges and strong serial number on the left side. The currently installed fire control group has been pinned to full auto only and a trigger group in original configuration is included; it is missing its left grip panel, the right panel is missing the two lower rivets and the metal surfaces retain about 90% arsenal refurbished blue showing some scattered light oxidation staining. The action seems to function well mechanically. Accompanying this arm is a whole host of wonderful original accessories including: Lafette tripod, four ammo cans containing ten 50-round belts each, two starter tabs, one "E" can with spare parts, one "P" can with lubricant containers, one ammo fortress box, one ammo can for cart mounting, one saddle drum with reproduction top cover, two assault drums with carrier, one ranging tool with case, a barrel changing mitt, leather sling, one brass catcher, one blank-firing barrel, two spare barrels with carry case, anti-aircraft mount, carry handle, winter trigger, a complete optical sight with case, light, battery case, periscope and rheostat and a complete gunner's case. The Lafette tripod is serial number "747a", dated 1943 with "ecy" maker code on the rear cover, matching "747" on the traverse arch and the search-fire mechanism is coded "bkh" with 1942 date and serial number that appears to be "4266a". The metal surfaces retain 80% of an old arsenal reapplied dark green paint that is flaking throughout exposing some of the underlying dark gray and red paint, the rear legs toning to plum-brown and the front a silvery gunmetal patina along with some other expected light dings from service. The green anodized aluminum sight mount is unmarked and appears to be a more modern replacement and the pads have been refurbished with a khaki cloth covering and a set of dvr 42-coded leather straps are included. All of the adjustment hardware seems to function well mechanically. The four ammo cans show varying shades of arsenal green paint with some light flaking and mild oxidation staining and the vast majority of belts are German wartime-made showing varying maker codes, dates and Waffenamt stamps. The spare parts "E" can shows a desert paint scheme with white stenciled "7055E" and contains a pair of tinted eye covers, three rubber caps, three belt starter tabs, two wrenches, brush, asbestos mitt, spare bolt carrier, complete spare bolt numbered "4668III" in very fine condition, spare feed tray and feed block, three-compartment tin with a number of assorted spare small parts, flash hider with case and spare recoil spring with case. The "P can also shows a desert paint scheme with stenciled white "P" on the lid and contains two green cans marked "OLEO" and "PETROLEO" in very fine condition. The 250-round "fortress" ammo can is coded "kr43" with faint Waffenamt and retains much of its arsenal green paint and shows a few scattered light dings and the cart-mounted can is similar showing some light pitting beneath the paint and strong "bow" code with 41 date and Waffenamt. The saddle drum is coded "wa42" and retains about 80% original black enamel finish flaking to pewter gunmetal and the strap with some light fraying with strong markings throughout; the reproduction top cover and its leather case rate near excellent. The two assault drums with metal carrier retain perhaps 90% dark gray paint flaking to gray-brown patina and showing a few minor dings and handling marks. The carrier is coded "euh43" and the drums "hqu43" and "ddf" (one with Finnish stamp). The aluminum range tool shows a crisp Waffenamt and rates near excellent as does the canvas case. The mitt and brass catcher rate about very good showing light staining and moderate wear. The blank firing barrel is coded "ixm", the rear insert "cnz" and "hth" and rates very fine retaining about 90% original blue with some scattered light oxidation and a fine bore. One of the spare barrels rates near excellent retaining most of its original blue with a bright excellent bore and the other rates very fine showing some scattered light pitting and a very good bore with frosting in the grooves. The green-painted metal barrel case shows a faint maker code and some overall light dings and dents. The anti-aircraft mounting arm rates very fine, the nuts on the mount assembly are replacements and the assembly shows scattered oxidation staining and appears to be unmarked. The original MG Z sight is serial number "94328" and retains crisp markings with "K.F." and "cme" maker code. The body retains

Lot Title/Description

about 92% dark green paint with areas thinning to underlying red-tone paint along with some mild high edge wear and some of the exposed hardware toning to gunmetal gray. All knobs and adjustments devices seem to operate smoothly and the optics are just a little bit discolored but very fine and completely serviceable. The green metal case with strap rates very fine showing some light flaking and handling marks along the exterior, the interior showing Emil Busch maker ink-stamp and an inked number "2017". The case contains the two original colored filter inserts, rubber eye piece, cleaning brush and cloth. Other sight accessories include a gray-painted battery box, Busch sight illuminator with intact plug, rheostat and unmarked green-painted periscope all in near excellent condition, the periscope showing some light flaking and a few areas of minor oxidation staining. Finally there is a leather gunner's case that rates very good showing two missing rivets, one lost strap, minor crackling and strong markings. The case contains a complete spare bolt showing some light oxidation staining, belt starter tab, anti-aircraft sight, oil can, broken shell extractor, chamber cleaning rod, wrench and combination screwdriver / shell extractor; the contents show some scattered light oxidation staining and handling marks otherwise rating very good plus to very fine. We have even more MG 34 accessories available in the Online Auction! This is a really wonderful ensemble with practically everything the German machine gun collector needs. The scope features single post with and very good optics that are slightly discolored but ceable. The bolt and magazine are also matching the action seems to function well mechanically. The case rates very fine retaining much of its olive drab some light flaking and exterior scuffs. The interior labels now matching numbers to the rifle and scope and the cope cover is also stencil-numbered to the scope and lent retaining much of its original paint showing some air of leather scope covers are also present and rate showing light staining. A very fine example of these desirable post-war British sniper rifles. (13C9807-240) {C&R} [Vincent Coniglio Collection] (4000/6000) Est. 4,000 - 6,000

Title/Description Lot

209	Very Fine Canadian No. 4 MKI* (T) Bolt Action Sniper Rifle by Long	]	211	Very Fine British P.14 Bolt Action Sniper Rifle by Winchester
	Branch			serial #W216097, 303 British, 26" '17-dated barrel with a bright excellent
	serial #90L8046, 303 British, 25 1/4" five-groove barrel with a bright			bore. The metal surfaces of this handsome rifle retain about 95-96%
	excellent bore. The metal surfaces of this attractive 1945-dated rifle			original blue showing some mild high edge wear, thinning along the bolt
	retain about 97-98% original blue showing some light high edge wear,			knob and some scattered light handling marks. The bolt body remains
	minor operational wear along the bolt and the front scope base showing			mostly bright showing some mild gray freckling and all markings remain
	some areas toning to plum-brown patina. All markings remain intact and			intact and strong with the serial number properly stamped along the right
	crisp, the left side receiver with proper model designation and maker			side rear receiver (sans the "W" prefix). The scope is a correct 1918
	information and the major components stamped with Canadian inspector			model by Periscopic Prism Co. Ltd. and is matching the rifle. The scope
	marks. The rifle shows a small "ENGLAND" import mark along the right			body and objective bell appear to have been arsenal-refinished,
	side receiver ring and British export proofs at the muzzle. The rear sight			retaining about 95% rust blue showing some scattered brown freckling,
	assembly is of Savage manufacture and correctly stamped with			and some light pitting throughout the objective bell that is blued-over. A
	Canadian "Maltese Cross" inspector mark and is properly lacking the			small broad arrow has been engraved atop the objective bell
	fixed battle sight. The No. 32 MK.3 telescopic sight and its mount			post-finishing and the brass fittings retain about 95% black enamel finish
	likewise retain about 97-98% original blue and black enamel finishes			showing overall light flakes toning to ocher brass. The smooth walnut
	showing some very mild high edge wear and minor handling marks. All			stock and handguards remain in very fine condition showing some
	markings remain crisp and clear with nice manufacturer markings,			scattered light dings, handling marks and a small 3/4" repaired chip at
	"1945" date, blue-painted "CB" and red "W". The scope itself is			the toe that shows some cracks reforming. They retain much of their
	serial-numbered "11-C" and the mount is matching the rifle. The scope features typical single post with crosshair reticle and very fine optics.			arsenal oil finish, the stock is stamp-numbered to the rifle on the bottom ahead of the forward action screw and shows strong inspector marks
	The walnut stocks remain in near excellent condition showing a couple			and crisp "(Broad Arrow) (Star) / (IW) / PATT.14" on the right side butt.
	sparsely scattered light dings along the toe line, one on the right side			The stock disc is unmarked and the front volley sight hardware is still

The right side of the magazine well is import-marked by I.A. Co. while the left side displays "MADE IN KOREA / 5.56MM K1A1" and the left side of the upper receiver is marked "DAEWOO PRECISION INDUSTRIES LTD." This desirable carbine is equipped with a three-position extendable metal buttstock, a right side reciprocating charging handle and a left side bolt release, the original sling swivels and military-style sights are intact including the M16 A1-style dual aperture rear, and it accepts standard NATO-style magazines with one Orlite Engineering polymer 30-round magazine included. Also included is an aftermarket aluminum drop-in quad rail in excellent condition complete with M1913-rail covers, Larue handstop
215	showing a tiny chip behind one of the sling bar screws, somewhat worn finish and the overall light dings and mild abrasions typically seen on Swiss service arms. The Kern 3.5 power scope shows moderate yellowing of the optics but they are certainly still serviceable and the adjustment knobs remain functional. All of the serialized parts are matching including the scope and magazine and the action seems to function well mechanically. Also included are a rather worn fair-condition correct leather sling, quick detach swivel and gray metal scope case that is stamp-numbered to the gun and remains in very good plus condition showing some light flaking and mild scuffs. A solid example of these exquisitely-manufactured sniper rifles that appears to have seen some honest use. About 4,150 of these rifles were manufactured in the late 1950's for the Swiss military. (13B9807-38) {C&R} [Vincent Coniglio Collection] (4000/5000) Est. 4,000 - 5,000 Excellent Fabrique Nationale Model FNC Paratrooper Semi-Auto Carbine		hider with a bright excellent bore. The metal surfaces retain 98% original gray Parkerized finish with some scattered light handling marks and very light silvering on the high edges and bearing surfaces. The black polymer checkered pistolgrip and ribbed handguards rate excellent with the handguards appearing an attractive mottled dark green color under direct bright light. The right side of the magazine well is import-marked by 1.A. Co. while the left side displays "MADE IN KOREA / 5.56MM K1A1" and the left side of the upper receiver is marked "DAEWOO PRECISION INDUSTRIES LTD." This desirable carbine is equipped with a three-position extendable metal buttstock, a right side reciprocating charging handle and a left side bolt release, the original sling swivels and military-style sights are intact including the M16 A1-style dual aperture rear, and it accepts standard NATO-style magazines with one Orlite Engineering polymer 30-round magazine included. Also included is an aftermarket aluminum drop-in quad rail in excellent condition complete with M1913-rail covers, Larue handstop and mounting hardware. An excellent condition, seldom seen Daewoo

The right side of the magazine well is import-marked by I.A. Co. while the left side displays "MADE IN KOREA / 5.56MM K1A1" and the left side of the upper receiver is marked "DAEWOO PRECISION INDUSTRIES LTD." This desirable carbine is equipped with a three-position extendable metal buttstock, a right side reciprocating charging handle and a left side bolt release, the original sling swivels and military-style sights are intact including the M16 A1-style dual aperture rear, and it accepts standard NATO-style magazines with one Orlite Engineering polymer 30-round magazine included. Also included is an aftermarket aluminum drop-in quad rail in excellent condition complete with M1913-rail covers, Larue handstop and mounting hardware. An excellent condition, seldom seen Daewoo K1A1. (23A9787-13) {MODERN} [1500/2000]
215	showing a tiny chip behind one of the sling bar screws, somewhat worn finish and the overall light dings and mild abrasions typically seen on Swiss service arms. The Kern 3.5 power scope shows moderate yellowing of the optics but they are certainly still serviceable and the adjustment knobs remain functional. All of the serialized parts are matching including the scope and magazine and the action seems to function well mechanically. Also included are a rather worn fair-condition correct leather sling, quick detach swivel and gray metal scope case that is stamp-numbered to the gun and remains in very good plus condition showing some light flaking and mild scuffs. A solid example of these exquisitely-manufactured sniper rifles that appears to have seen some honest use. About 4,150 of these rifles were manufactured in the late 1950's for the Swiss military. (13B9807-38) {C&R} [Vincent Coniglio Collection] (4000/5000) Est. 4,000 - 5,000 Excellent Fabrique Nationale Model FNC Paratrooper Semi-Auto Carbine serial #S011982, 5.56 NATO, 16" chrome-lined barrel with a bright excellent bore. Imported by Howco of Laurel MD, the metal surfaces of this rare and desirable carbine retain 99% original black enamel and anodized finishes with some light wear behind the short flash hider, slight high edge wear and a couple light handling marks. The black synthetic handguard and pistolgrip rate excellent as does the folding tubular metal buttstock. The rotating front sling swivel and original military sights including the folding dual leaf aperture rear sight and folding grenade launcher sight are intact. The buttstock locks up tightly in both positions, one C-Products aluminum 30-round magazine and a black nylon sling are included and the action of this excellent condition Paratrooper appears to function well mechanically. This unusual variant		hider with a bright excellent bore. The metal surfaces retain 98% original gray Parkerized finish with some scattered light handling marks and very light silvering on the high edges and bearing surfaces. The black polymer checkered pistolgrip and ribbed handguards rate excellent with the handguards appearing an attractive mottled dark green color under direct bright light. The right side of the magazine well is import-marked by I.A. Co. while the left side displays "MADE IN KOREA / 5.56MM K1A1" and the left side of the upper receiver is marked "DAEWOO PRECISION INDUSTRIES LTD." Winchester Model 1873 Saddle Ring Carbine

228 Rare Remington-Beals First Model Pocket Percussion Revolver with Box & Accessories serial #75, .31 cal, 3" octagon barrel with a partially bright about very good bore showing some scattered light pitting and strong rifling throughout. The barrel of this fourth issue revolver retains perhaps 15-20% original bright blue with the balance flaked to a mix of pewter gunmetal and mild gray-brown patina also showing some scattered light scuff marks and a few small dings. The cylinder and frame have mostly toned to pewter-gunmetal patina showing a few light dings, some sparsely scattered pinprick pitting and the cylinder retaining some generous flakes of original bright blue. The hammer shows remnants of silvery case-hardened patina while the trigger and hand retain a healthy amount of bright fire blue. The left-side frame-mounted spring appears to be an older replacement or was repaired long ago and the triggerguard retains about 85% original silver finish taking on a lovely dark tarnish with some thinning to German silver along the bow. The Beals patent information along the barrel remains mostly strong and the Remington topstrap markings remain crisp. The smooth black gutta-percha grip remains in excellent condition showing just a couple tiny dings or mild handling marks. It is clearly stamp-numbered matching on the base and its fit to the frame remains excellent. The triggerguard is also matching, the silver cone front sight is intact and the action seems to function well mechanically with very good timing and lock-up. The revolver includes a scarce original black paper-covered box, small powder flask and dual cavity bullet mould. The box rates about very good-fine showing light flaking of the textured black exterior that still remains mostly intact. The corners of the lid are separated and there are a few small tears, but the flaps remain intact, the base shows detached corners on one side flap, a few small tears and overall mild staining with the model name lightly written in pencil along the interior. The internal partitions are intact and the blue paper base is mostly intact and shows number "1612" in red grease pencil. The small brass Federal Eagle powder flask with crossed pistols motif rates very good plus showing a couple small shallow dents, some mild tarnishing and the spring with a tiny crack. The spring shows some remnants of bright fire blue and the flask has toned to a pleasant ocher patina overall. The unmarked dual round ball mould remains partially bright showing some mild old oxidation staining and light dings. A seldom-seen ensemble that would make a fine addition to any advanced Remington collection. (13C9857-38) {ANTIQUE} (2000/2500) Est. 2,000 - 2,500 229 Excellent Remington Model 95 Double Deringer serial #832, 41 RF, 3" barrels with bright excellent bores. This is a wonderful Type II deringer retaining 99% plus original nickel finish showing just a few tiny scattered handling marks. The trigger and hammer retain 98% original blue showing some faint silvering while the extractor and latch similarly retain 98% attractive pale fire blue. The Remington Arms Co. address remains clear. The pistol wears a set of un-numbered smooth mother-of-pearl grips that remain in very fine condition showing just a couple of very tiny slivers missing along the edges. The action seems to function well mechanically, the hinge is intact and barrel lock-up is solid. A wonderful double deringer that would make an excellent addition to any Remington collection. (13B9362-63) {C&R} [Edward W. Marron, Jr. Collection] (1000/1500) Est. 1.000 - 1.500 230 Winchester Model 1892 Trapper Saddle Ring Carbine serial #786820, 32 WCF, 14" barrel with a very good plus bore which shows strong rifling but with some scattered light pitting, more prominent near the breech. The metal surfaces retain about 90-92% later lightly buffed blue, with the magazine tube, hanger and band being a dull pewter gray patina, as-is the left frame flat. The gumwood buttstock and forend rate very good plus as sanded and refinished, the metal now proud over all, with remnants of light handling marks beneath the finish. The left side saddle ring staple has been removed, there are two fillers screws in its place. The front sight blade is a later replacement but the correct original ladder-style rear is present. The arm seems to function well mechanically and likely would still spin a bullet very well. Included with the arm is a BATF letter which removes it by serial number from the provisions of the NFA as a C&R. An attractive and handy little smallbore trapper. (39854-3) {C&R} (3000/5000) Est. 3,000 - 5,000

231	Winchester Model 1873 Saddle Ring Carbine
	serial #236093, 44-40 WCF, 20" barrel with an about good bore which
	shows evident rifling but with light pitting its full-length. This is a very
	honest Third Model Saddle Ring carbine with a very "been there-done
	that" look. All the metal surfaces are a pleasing, mostly smooth, plum
	brown and pewter patina with scattered sparse oxidation here and there, the barrel showing some light pitting on the left side, the magazine tube
	on both sides, between the front band and forend. The receiver and
	plates show a bit as well and there is some silvery case-hardening on
	the hammer, the cartridge lifter an ochre patina with the caliber marking
	a bit light. The walnut buttstock and forend rate very good with the
	expected overall light dings and handling marks, the butt with some old
	added varnish, it is however un-sanded and the wood is proud of the
	metal overall. The forend shows more wear, as-is common, from the
	years of carry. There is a light scar along the left side front from band
	removal and installation and a couple more light scuffs, there is a small
	divot at the toe and a 3" crack at the right side of the comb but it is tight
	and will not flex. What is likely the original silver blade front sight is in
	place as-is the ladder style carbine rear and the saddle ring is
	appropriately in its left side stud. The gun seems to function well
	mechanically and is an overall very good example, made in 1887, that
	looks like it spent its share of time in a saddle scabbard. (3B9746-24)
	{ANTIQUE} (2500/4000)
232	Est. 2,500 - 4,000 Magnificent Engraved and Cased British Percussion Prize Rifle by
202	Joseph Lang
	.451 caliber, 33" part round part octagon barrel with flattened top
	sighting plane and a bright excel-lent bore. The top of the barrel is
	marked "J. LANG 22 COCKSPUR ST. LONDON" as well as HENRY'S
	PATENT / NO. 6 P / EDINBURGH". The lock, barrel breech and tang
	show wonderful relief floral scroll with lovely border work and lockplate is
	engraved just above front mounted sliding bolt "J. LANG". The round
	patchbox, buttplate tang and triggerguard show more of this lovely scroll
	engraving. The left side of the butt shows a large engraved oval silver
	plaque which is engraved "Presented / By / T. Sutton Western Esqre
	M.P. / to the / 23rd Maldon Essex Rifle Volunteers / and won by / Private
	George Low / August 7th 1862." A period account of this presentation is found in the September 6, 1862 edition of the The Illustrated London
	News on page 271 where the entry reads "A rifle given by Mr. T.S.
	Western M.P. and won by Private Low". The rifle is setup in long range
	military service rifle configuration with military barrel sights only and
	configured much like a pattern 1853 rifle with a checkered pis-tol grip
	stock. The condition of the rifle is fabulous with the barrel show-ing 95%
	of its original brown finish with vivid damascus pattern visible its entire
	length with just a little very light and scattered specks of oxi-dation
	staining. The lock, breech and tang show 90% original color
	case-hardened finish which is darkening slightly but still shows nice
	contrast. The patchbox shows 95% original color case hardened finish
	which is fading slightly but is all there, the buttplate is a mix of gray
	pati-na and faded color. The checkered English walnut stock rates
	excellent with nearly all of its original finish and with extremely sharp checkering. The edges are sharp and the dropper points are as crisp as
	can be. The rifle is sighted with a globe style front mounted close to
	muzzle along with a graduated adjustable rear ladder sight. The rifle
	comes in its original oak case with green baize lining and original Lang
	lid label. The case includes a bush pattern copper powder flask, two
	brass bullet moulds for casting different weight projectiles, two tins of
	percussion caps, two rosewood turned cannisters, one with patches, a
	bone cannister with a spare nip-ple along with a leather sling. The case
	is in about excellent condition overall with normal wear and marks on
	exterior, clean interior and it is sound. This is a stunning prize rifle
	exhibiting the finest 19th century British quality and remaining in superb
	condition. The period newspaper account of the presentation is a nice
	little extra. An investment quality British percussion prize rifle. (1G9670-600) {ANTIQUE} [David & Lore Squier Collection] (7000/9000)

Lot Title/Description

Rare Remington Experimental Cook Patent Bolt Action Navy Trials Rifle Formerly of the Remington Arms Co. Factory Collection 6mm CF, 30" barrel with a bright near excellent Metford-rifled bore showing perhaps a little minor frosting and strong rifling throughout. This is an interesting rifle, referred to previously as an R. C. Fay patent Model 95 Special Navy rifle uti-lizing a patent from October 8, 1895. Further research reveals however that the arm follows the patent drawings of a Roswell F. Cook taken out on May 14, 1895 (number 539037) and the book The Remington-Lee Rifle by Myszkowski also cites Cook as the designer. Research does confirm Remington employee Rimmon C. Fay indeed took out two patents on October 8, 1895 (numbers 547602 and 547603) relating to a "Magazine-Firearm" and "Cartridge-lifter for mag-azine-guns", perhaps these were a later improvement of the arm but the patent drawings for these designs cannot be located. Remington submitted five rifles on March 15, 1894 for naval trials and this appears to be one of those arms. The descriptions of the arms' exact features in the naval report is rather vague and it can be surmised that this rifle is either Remington's No. 1, 2 or 5 as these all had right-side-mounted magazines. The report noted that the Remington bolt was of excellent design but that the magazine had significant issues and it seems that all of the models were ultimately doomed as a result of this. One further Remington rifle was tested in the later May 15, 1895 test, this one being fitted with a Russell-Livermore magazine designed by Major W. R. Livermore of the U.S. Army, Ultimately the trials came down to the Luger turn-bolt rifle and the Lee straight-pull rifle, with the Lee winning final selection. The rifle itself remains in very fine condition showing honest use consistent with trials testing. The barrel retains about 95% original blue showing some scattered light freckling and mild fading with an area of cleaned light pitting along the right side muzzle and front sight. The barrel is marked "REMINGTON ARMS CO. ILION.N.Y." beneath the handguard and the left side of the rear sight shows "300" and "400" range markings, these appear to be the only external markings. The action retains perhaps 85% original bright blue showing overall flaking to a pleasant gray-brown patina, some scattered light specks of minor oxidation staining and a few light dings. There are two small holes at the bottom left edge of the action possibly related to magazine disassembly or for drainage. The magazine is of a hopper-style design similar to that of a Krag, the cover situated at the top of the action rather than the side. The bolt body is partially bright showing some mild gray patina and remnants of pinprick pitting. Bolt design is similar to that of the Remington-Lee Model 1885 utilizing a cock-on-close action and featuring a rear bolt-stop lug also acting as an auxiliary safety lug and six interrupted thread forward locking lugs; one can appreciate the trials committee's praise of the bolt design. Interestingly the patent drawings show more traditional dual locking lugs; perhaps the interrupted thread design was an improvement by the aforementioned Mr. Fay. The rifle also fea-tures a left-side magazine cutoff and right-side spring-loaded button to remove the bolt. The smooth straight grip walnut stocks and handguard remain in about very good plus condition showing a strong arsenal oil finish with a number of moderate shallow chips at the toe, a period repair to a full-length crack through the handguard that is starting to flex once more, a few smaller drying cracks scattered about and light dings. The buttplate has toned to a gray-brown patina showing some scattered light pitting. The buttstock retains its Remington factory collection brass inventory tag along the toe line numbered "213". The rifle is equipped with military style sights and the action seems to function well mechanically. A very interesting Remington trials arm that would make for a wonderful addition to any advanced Remington or martial arms collection. (13F9857-3) {ANTIQUE} (6000/8000) Est 6 000 - 8 000

serial #A414, 50 CF, 32" barrel with Metford rifling and a bright very good plus bore showing a few scattered areas of pinprick pitting, mild frosting and good rifling throughout. The barrel and receiver of this interesting British rifle retain about 92% original blue showing some scattered mild freckling, a few small dings or scuffs at the back right edge of the receiver and some areas taking on a pleasant plum-brown patina. The barrel bands have mostly toned to gray-brown patina showing some remnants of black enamel and the rear sight parts show good straw and fire blue finishes. The bolt body remains mostly bright, the rear bolt lock shows nice straw color and bolt end piece has toned to a pleasant smoky gray case-hardened patina. The brass triggerguard, buttplate and nosecap have taken on a nice mild ocher patina showing a few minor dings. The rear sling swivel screw head is broken, the arm is stamped with Birmingham black powder proofs and the top barrel shank with "T. WILSON & Cos PATENT". The smooth walnut stock remains in about very good plus condition showing a rather worn oil finish, a small u-shaped hairline crack at the left edge near the rear of the bolt, a tiny hole in the left side butt and some overall light to perhaps moderate dings. The arm is equipped with sling swivels, cleaning rod, military style sights and the action seems to function well mechanically. The Wilson rifle was submitted to the British rifle trials conducted in 1867 and placed in the second tier list of arms, these were generally arms of more complicated design or ones that did not necessarily meet all of the initial requirements. It appears it actually ended up being a finalist and was tested again in the second round of 1869 but was felled by a breech failure. Despite this, it is impossible to overlook the interesting and rather advanced features of the design. The bolt is a straight-pull striker-fired design locked with dual rear locking lugs and cycled via rotating knurled collar at the rear and pushed home with the with the checkered end piece. There is a large flange at the rear of the action beneath the bolt that acts as a trigger block while the bolt is out-of-battery and the arm is equipped with a very modern flip safety within the triggerguard. A fascinating and very rare British experimental rifle. (13D9670-414) {ANTIQUE} [David & Lore Squier Collection] (4000/6000) Est. 4,000 - 6,000 British Experimental Mayall Patent Single Shot Bolt Action Military Rifle serial #502 (bolt), 577 CF, 39" barrel with a bright excellent bore. The barrel of this lovely rifle retains about 96% original plum-brown finish showing some mild silvering at the muzzle, some scattered light handling marks and faint thinning along its length. The barrel bands retain about 95% original bright blue showing some scattered light flaking to pleasant gray-brown patina and their screw heads show some minor slot wear. The lockplate, hammer and bolt heads likewise retain about 95% vibrant case-hardened colors showing a few small areas of mild oxidation staining and remnants of protective lacquer. The bolt body itself is partially bright showing brown freckling along the turned-down handle and is crisply-marked in small lettering "T. J. MAYALL'S PATENT". There is a small ding at the right edge of the receiver from the hammer being let down when the bolt is retracted but this is unobtrusive. The bolt head screw and rear sight parts retain most of their lovely brilliant fire blue. The breech is stamped with Birmingham black powder proofs and the brass triggerguard, buttplate and nosecap have toned to a mild ocher patina. The smooth walnut stock remains in about very good plus condition showing a little period added finish, a few areas of old light scratches scattered along its length, light dents and a tiny flake and drying crack behind the receiver. There is a single small hole on the left side butt that does not appear to be from insect damage. instead perhaps where a small inventory disc was once affixed. The rifle is equipped with military-style sights, sling swivels, P1853-style ramrod and the action seems to function well mechanically. The action utilizes a conventional lockplate and hammer paired with a rather short low-profile bolt. The separate bolt head contains the firing pin and is linked to an extractor along the bottom of the raceway and the bolt body locks into the receiver via large forward locking lug and by the bolt handle root at the rear; the bolt can only be opened with the hammer at half-cock. Thomas Jefferson Mayall was a rather prolific inventor during the mid 1800's patenting numerous mechanical devices including this system and a number of early breechloading and automatic cannon designs. While this arm seems to be of the correct timeframe and construction for British trials, records indicate it was not part of the testing that would eventually adopt the Snider. This is a very fine example that would make an excellent addition to any advanced antique martial arms collection. #### Lot Title/Description

Lot Title/Description

249 Wonderful Sharps Model 1874 Special Order Sporting Rifle serial #159542, 45 2 7/8", 30" octa-gon barrel with a bright excellent bore. This rifle fea-tures adjustable double set trig-gers, checkered pistolgrip stocks and a checkered steel shotgun buttplate. The top of the barrel shows proper Bridgeport address and "Old Reliable" moniker. The top of barrel just ahead of action is marked "CAL. 45" and the right flat is marked "110" which represents the powder charge and is unusual as they typically just marked the case length. The condition of the rifle is wonderful with the barrel retaining 95% original blue overall with a little light silvering along the high edges. The action and lock shows 90% plus original color case-hardened finish which has softened in contact areas and is vivid in other areas. The loading channel shows a little scattered light oxidation staining but the rifle is free of any pitting. The checkered pistolgrip buttstock and forend are of walnut and rate excellent with 97% original finish remaining and with sharp checkering. The bottom of the pistolgrip features a round checkered panel and the tip of the forend at schnabel shows a heart shaped checkered panel. The rifle is sighted with a globe front, Lawrence rear and Vernier tang mounted peepsight. The included factory letter states the gun was ordered by D.W. Longfellow of Fort Bethold, North Dakota in December of 1876, six months after the Battle of Little Big Horn. Daniel Webster Longfellow was a post trader at Fort Berthold during the 1870's and 80's. In Labowskie's letter he states that three identical rifles were ordered at the time and that "It is easy to imagine that these rifles were ordered by three Army Officers who wished to own a kind of Sharps version of the Officer's Model of the trapdoor Springfield.". The rifle was formerly part of the Stagecoach Museum and is illustrated and described in the Stagecoach Museum Gun Collection book. In the book they also credit the gun to Longfellow who they state was from Minneapolis and that they purchased it directly from the original owner and he stated that he took it on a Buffalo Hunt on the Union Pacific Railroad where he shot buffalo from the windows of the train cars. While the details are conflicting the person is the same and the gun was shipped to Fort Berthold, not Minneapolis. This is a high condition, specially ordered Sharps rifle shipped to North Dakota during the height of the Buffalo trade. (1F9790-22) {ANTIQUE} [Bob Borcherdt Collection] (15.000/25.000)Est. 15,000 - 25,000 250 Very Fine British Experimental Soper Patent Single Shot Military Rifle serial #24, 450 CF (Straight Wall Case), 34 3/4" barrel with Henry patent rifling and a bright excellent bore. The barrel of this rifle retains about 90% original plum-brown finish showing overall thinning and toning to mild gray patina and some areas of mild brown freckling. The action and triggerguard retain perhaps 85% attractive smoky case-hardened colors remaining quite vibrant in the more protected areas also showing some light handling marks and toning to silvery pewter patina. The action is embellished with some tasteful light English scrollwork, the left side is neatly engraved "INVENTOR & PATENTEE / W. SOPER / READING" and the front tang of the triggerguard with "No. 24". The sideplates and breechblock release adjacent to the trigger retain very good fire blue and the trigger itself shows nice straw color along the sides. The rear barrel band and buttplate have toned to grav-brown patina while the front band with right-side bayonet lug retains about 90% original bright blue showing some light flaking. The rear sling swivel and its screw appear to be older replacements and the front swivel is very slightly bent but this is unobtrusive and the arm is stamped with London black powder proofs. The smooth walnut stock remains in very fine condition retaining most of its original oil finish and showing a very tiny drying crack at the heel, three tiny holes along the right side butt and some scattered light dings and handling marks. The stock shows some subtle straight grain figure and metal-to-wood fit is excellent with nice edges. An original sling and brass-tipped cleaning rod are present, the rifle is equipped with military style sights and the action seems to function well mechanically. The Soper is of excellent design featuring a sidelever that actuates essentially the whole mechanism, lifting the breechblock, cocking the hammer and ejecting the spent case while pushing the lever back up closes and locks the action and a breechblock release is provided adjacent to the trigger. The Soper was tested in the British military trials of 1866-67 and placed into the second tier of arms, these mostly being designs the committee considered overly complicated but still worthy of study. The testing committee was able to achieve firing 60 rounds in a minute with the Soper rifle and the arm did see some moderate commercial success as a high-end sporting rifle. This is a really lovely example of a very interesting and desirable British rifle made in a military configuration. Remington No. 2 Deluxe Rolling Block "Schuetzen" Rifle
serial #H40443, 25-20 Single Shot, 28 1/4" octagon barrel with a bright
very good plus bore showing some very fine oxidation and mild frosting
in the grooves with otherwise strong rifling throughout. The barrel of this
interesting rifle retains about 80% of a fine quality period restored
plum-brown finish showing some overall mild thinning under bright light,
a few light dings and scuffs along the edges and some remnants of fine
pinprick pitting beneath the finish. The Remington Arms Co. address
and caliber designation remain intact and guite crisp. The action retains
perhaps 70% original vibrant case-hardened colors that remain
particularly vivid along the left side, triggerguard and either side of the
hammer with most of the loss due to some cleaned light pitting along the
right side, top of breech and lower tang that are toning to a silvery
pewter patina. The hammer and breechblock retain about 90% original
blue with loss due to some old oxidation and light pitting along the spurs.
The checkered pistolgrip walnut Schuetzen-style buttstock and forend
with ebony tip insert remain in very fine condition as very lightly cleaned
and refinished long ago showing some sparsely scattered light dings
and handling marks. The forend is stamp-numbered matching the action
and the diamond point checkering shows light overall wear but remains
intact. The checkering along the pistolgrip is of a slightly different style
with finer points and the buttstock is un-numbered and likely a
replacement from the period of use. It has certainly been with the arm
for a very long time and was expertly crafted and fitted. The buttstock
features a generous left-side cheekpiece and heavy nickel-plated brass
buttplate retaining about 98% finish and showing some scattered light
dings. The name "C. H. BARNES" is stamped in small block letters on
the inside of the buttplate. The barrel is matching the frame, the rear
sight dovetail has been blanked and the rifle is sighted with a Lyman
target globe front sight and tang sight with wide aperture disc. The
action seems to function well mechanically. An attractive and interesting
No. 2 that can do doubt still be enjoyed at the range. (13C9670-130)

	Winchester-marked magazine is included. A fantastic			metal checkered. The rings support a Carl Zeiss Zielklein telescopic
	1942-manufactured sporting rifle. (22B9789-39) {C&R} (1000/1500)			sight with crosshair reticle and bright excellent optics. The scope rates
	Est. 1,000 - 1,500			very good with light wear to both the tube and the ocular lens tube
255	Sharps Borchardt Model 1878 Short Range Rifle			showing a few scratches from a previous mounting. The rifle features
	serial #17346, 40 1 7/8", 26" tapered round barrel with a bright excellent			quick detachable super grade-style sling swivels and there is a gold
	bore. This rifle features an unpaneled action along with checkered			shield-shaped monogram plate along the toeline which remains
	walnut stocks with an uncapped curled pistolgrip and a checkered hard			un-engraved. Bob Owen made some of the nicest rifles of the classic
	rubber shotgun buttplate. The condition of the rifle is very fine and it is			American sporting rifle-era, this example is no exception and shows just
	all original. The barrel shows proper Bridgeport address along with the			enough wear one could still take it afield while letting it appreciate in
	"Old Reliable" moniker and is caliber marked on left side just ahead of			value as the years pass. (39721-2) {C&R} (2500/4000)
	breech "40 1 7/8". The barrel retains 98% rich original blue finish overall		057	Est. 2,500 - 4,000
	with all markings remaining clear and legible. The action retains about		257	Fine Griffin & Howe Winchester Model 70 Sporting Rifle
	95% original color case-hardened finish which has faded somewhat but			serial #445485; G&H No. 2410, 243 Win, 24" barrel with a bright
	remains visible on all surfaces. The right side of the action is slightly			excellent bore. The metal surfaces on this top-notch sporting rifle retain
	more faded than the left side, all markings are clear and legible, most screw slots are clean with a couple showing very slight wear. The			about 99% top-quality maker blue, the underside of the barrel showing a
				couple freckles of very light oxidation ahead of the forend tip. The
	checkered pistolgrip walnut buttstock and forend rate excellent with 95% original finish remaining and with sharp checkering. There is one minor			receiver ways remain bright with nice engine turning on the follower and the right race, the bolt body, extractor and guide lug as well with all of
	crack in the left side of the stock at the action running with the grain and			their lovely G&H engine turning. The barrel is neatly engraved with the
	ending where the checkering begins. The rifle is sighted with a			G&H address and number, with a nice wedge of quality scroll engraving
	windgauge front, Lawrence sporting rear and a Sharps short range			at the breech end above the chamber. The bolt knob has been very
	peepsight mounted in integral base. There are quite a few variations			neatly metal checkered around its circumference and the trigger very
	within the short range rifle including those with uncheckered capped			neatly, very finely checkered as well. The hinged floorplate one-piece
	pistolgrip stocks and those built with paneled actions. With a total of only			bottom metal shows exquisite, near full coverage, quality tight scroll and
	150 of these rifles produced, it is fair to say that it would be very difficult			borderline filigree engraving with a circular monogram at the center of
	to upgrade from this rifle. A wonderful, investment quality Sharps			the floorplate inlaid in gold in Art Deco-style monogrammed initials
	Borchardt rifle. (1E9790-88) {ANTIQUE} [Bob Borcherdt Collection]			"JBS". The rifle is stocked classic style in a very lovely grade of what is
	(7000/9000)			likely Circassian walnut, showing the classic G&H flared shadowline
	Est. 7,000 - 9,000			cheekpiece. The stock itself rates excellent showing only very minor,
		·		light handling marks here and there from careful use afield. It features
				the signature ebony forend tip, blued steel pistolgrip cap and checkered
				Niedner-style buttplate giving a 13 1/2" length of pull. The wraparound
				checkering patterns front and rear are flawlessly executed and the rifle
				fitted with G&H style detachable swivel studs. There is a Williams ramp
				front sight soldered to the barrel with a simple brass bead and hood,
				vintage Leopold "detacho" bases and rings, the rear base with the
				"emergency" peep aperture for use when the scope is removed. The
				rings mount a Pecar variable 3-7x telescopic sight with crosshair reticle
				and excellent optics, the scope itself rating excellent. As we have come
				to expect from G&H, this is a top-of-the-line sporting rifle, beautifully
				embellished and flawlessly executed in a fabulous light-recoiling caliber

266 Interesting German Gewehr 98 Bolt Action Rifle by Danzig with Dual 268 SS Marked and Reworked Gew 98 Bolt Action Rifle Claw Mounts & Oigee Scope serial #8666c, 8mm Mauser, 24" barrel with an oxidized bore with light serial #7993c, 8mm Mauser, 29" barrel with an about very good bore rifling. The arsenal blue finish has toned to brown patina on the receiver, showing darkness and oxidation in the grooves with otherwise strong barrel bands, and bottom metal with light wear on the contact points and rifling throughout. The barrel of this 1906-dated rifle has toned to a deep high edges, a few scattered spots of light oxidation and remnants of light gray-brown patina showing some scattered old oxidation staining and pitting, the barrel and rear sight base have a mottled gray patina with strong remnants of original blue along the wood line. The receiver spots of light oxidation staining, and scattered light handling marks; the remains in-the-white and shows some scattered brown freckling and bolt body and safety have toned to brown with thinning, light operational smoothed-over light pitting, as-does the bolt while the triggerguard and wear, and scattered light pitting. The laminated hardwood stock has floorplate are a dark brown patina showing old oxidation. All markings been converted to K98k specifications and is in about very good remain intact and strong. The Oigee Luxor 3X scope has mostly toned condition as lightly cleaned with a tight about 1/4" crack behind the to a mottled gray patina showing some scattered areas of triggerguard, a few tiny chips, an about 2" x 1" arsenal repair behind the smoothed-over light pitting and old oxidation, the brass hardware triggerguard where the original sling swivel was removed, scattered light showing strong black enamel finish and all markings remain strong. The handling marks, and the flat steel buttplate is proud at the toe and edges scope is numbered "100433" and features duplex-type reticle with of the heel; the buttplate has been cleaned to bright with scattered fine somewhat yellowed but serviceable optics, the crosshairs with some oxidation. The buttstock is marked with a few Imperial proofs , a soft mild "fraying" and some mild occlusions along the periphery. The rear Death's Head behind the triggerguard, and the stock and handguard are base screws are not quite indexed properly, the bolt handle is turned numbered to the rifle; the buttplate is crisply numbered to the rifle, as down a bit sharper than it ought to be and there is no cutout in the stock well. The maker mark has been removed from the receiver ring, the ring for the handle, but the hardware appears to be quite old with a similar is marked with a clear Imperial Eagle firing proof and serial number, as patina as the rifle. The smooth walnut stock and handguard remain in well as the faint remains of commercial proofs, three Imperial proofs. about very good condition showing areas darkened from the years, a The barrel is marked with a "SS / (Death's Head)" and "SS2 / (Death's few scattered shallow old chips, some mild abrasions behind the upper Head)" on the left side, the markings relatively clear with a little tang, light drying cracks along the butt and overall dings. There are faint softening, and two five-points stars are marked just ahead of the inspector stamps along the right side butt, no visible number along the receiver ring. The barrel, bolt, rear sight, barrel bands, follower, toe line and the disc is unit-marked "R.22.1.63." The rear sight parts are floorplate and triggerguard are all serialized and matching to the rifle; numbered "29" and the remaining serialized parts are matching, the tip the bolt stop is numbered to a different rifle. The rifle is sighted with the of the firing pin broken off and the action otherwise seems to function standard barleycorn front sight and leaf rear sight, and appears to well mechanically. An interesting Gew.98 sniper rifle, likely assembled function well mechanically. Included with the rifle is a detachable muzzle post-war but one that certainly looks the part. (13B9736-48) {C&R} cover, 10" cleaning rod, and leather sling. A very good early SS rifle. (1800/2200) (14C9736-4) {C&R} (2000/4000) Est. 1,800 - 2,200 Est. 2,000 - 4,000 German K98K Long Side Rail Sniper Rifle by Gustloff Werke SSZZA4 Marked K98k Bolt Action Rifle by Steyr 267 269 serial #6997, 8mm Mauser, 24" barrel with a very good bore with serial #55519, 8mm Mauser, 24" barrel with a bright excellent bore. The metal sur-faces of this very fine bcd 4-coded rifle retain about 95% intermittent light pitting and oxidation, but strong rifling. The metal original smooth gray Parkerized finish showing a few scattered areas of surfaces of this "bnz / 42" coded rifle have a mottled brown patina with freckling and mild brown patina mostly along the barrel nearer the remnants of original blue, light wear on the high edges and contact muzzle and front band along with some minor handling marks. The points, a few scattered traces of previous light oxidation and scattered stamped qnw-coded triggerguard and the front sight hood retain a light handling marks. The laminated hardwood stock is in very good plus similar amount of original blue showing some minor high edge wear condition with normal field wear, and a few scattered light handling while the extractor has taken on a slightly case-hardened tone. The rifle marks now devoid of finish. The cupped steel buttplate is a dull is equipped with the proper checkered buttplate that has toned to a gunmetal gray with scattered light oxidation staining and light pitting. silvery pewter patina and the scope base and mount retain about 98% The stock is marked with a crisp Death's Head behind the triggerguard, original blue showing some mild high edge wear. The Kahles H/4x60 and is lightly serialized and matching on the toe line; the upper barrel scope with sunshade retains about 95% original blue showing some band resists removal, so the numbering of the handguard cannot be scattered areas of light flaking and mild oxidation stain-ing and the alloy verified. The coding on the receiver ring remains clearly marked, the fittings retain a similar amount of black enamel finish. The scope itself is barrel is marked with the serial number and three correct crisp numbered "43551" and features the typical German reti-cle with slightly 'WaA623'' waffenamt on the left and a crisp "(Eagle) / SSZZA4" marking yellowed optics showing some minor occlusions around the periphery on the right side, just above the wood. The rear sight, bolt handle, and but otherwise remaining completely serviceable. The smooth laminated triggerguard are serialized and matching to the rifle and the remaining hardwood stock and handguard remain in about very good plus parts are unmarked; a crisp "77" waffenamt stamped on the extractor is condition, the stock showing a couple of scattered thin cracks with a 1 the sole other waffenamt marked on the rifle. The rifle is sighted with the 1/4" crack behind the triggerguard, 2" ahead of the scope base and a standard barleycorn front sight and leaf rear sight, the front sight hood is very small one ahead of the triggerguard. The stock is otherwise guite intact, the follower has been lightly modified to remove the bolt hold-open feature, and the rifle appears to function well mechanically. nice showing just some scattered light dings and handling marks with a strong "(Eagle) / H" on the right side butt and "c" along the toe line. The Included with the rifle is a 12 1/2" cleaning rod, a "SS (Death's Head) 1" stock and handguard are un-numbered inside and out and the stock marked leather sling in very good condition with a few light drying cracks does show a strong Waffenamt on the interior and "Br" beneath the and spots of light wear, and finally a hand-written note from Bob Jensen buttplate. All mark-ings remain strong and intact, the receiver ring with dated June 18, 2001 detailing the collection of nineteen serial numbers proper "(Eagle) / 749", the right edge of the rear sight base shows a of "SSZZA4" rifles he had recorded in thirty years, including the serial small "a" and "(Eagle) / 18", the right side receiver ring, follower and number of this very rifle: Mr. Jensen's final remark to the previous owner floorplate are stamped with a proper small "1" and the barrel bands are being that he had "...a rare item indeed." (14C9736-58) {C&R} unmarked. The scope base and mount are stamped with the correct (2000/3000) "(Eagle) / 359", the bolt is equipped with the proper scope clearance Est. 2.000 - 3.000 safety, all of the numbered bolt parts are matching and the scope mount is also matching the receiver. Included are a set of black leather scope covers and a brown leather sling. The covers rate very good plus showing some scuffs, crackling and a "(Eagle) / WaA414" on one cover while the sling rates very fine showing some mild staining and minor flaking along with a pencil-written name on the inside that is very difficult to discern. This is a very lovely correct late-war sniper that would make an excellent addition to any advanced sniper or martial collection. (13G9807-204) {C&R} [Vincent Coniglio Collection] (10,000/15,000)

#### Lot Title/Description

Lot Title/Description

283 Rare Samuel Adams Patent Combination Break-Open Sporting Percussion Rifle-Shotgun serial #17, .42 cal./16 ga., 30 1/2" rifle barrel insert and 30" shotgun barrel, with a bright very fine to excellent rifle bore which shows some very sparsely scattered very light oxidation staining or perhaps a sparse pit here or there. The shotgun barrel rates very good with scattered light pitting, its chamber insert is not present. These very well-made guns were the brainchild of Samuel Adams, gunsmith of Troy, New York, previously Springfield Mass., likely later Battle Creek Michigan, located in Troy 1839-40, the patent for this very interesting and well-thought-out combination gun having been issued in 1838. The part octagon part round barrel shows what is likely original plum brown, its full-length, with toning to pewter on the sharp edges, and the scattered light dings or handling marks here and there. The barrel is fitted with a simple post-style silver blade front sight and a sheet of German silver riveted to the rear sight dovetail base, which is likely a later repair. It features nice turned medial at the point of transition and is marked "Samuel Adams Patent" near the breech to the rear of the sight. The frame is rather interesting and incorporates two 5" arms left and right upon-which the barrel pivots for breechloading of the auxiliary chambers which hold the powder charge for both rifled and smoothbore barrels. There is a back-action lock and the base frame for the entire assembly has a spring-loaded thumb catch which engages a hooked protrusion at the breech of the barrel, locking the barrel-to-frame securely. There is the very lightest, loosest open foliate engraving with very rudimentary gamebirds and a semi-fancy scroll-like sideplate, with "Troy NY" on the right pivot arm. The bow of the iron triggerguard shows a running hare and the tang of the smooth buttplate shows a running sporting dog. The American walnut buttstock rates very good to fine with some added varnish and the expected dings and handling marks from the years, showing some very lovely grain figure. The forend shows more wear and rates very good with the same added finish, with a German silver forend tip and lightly engraved German silver band at its rear. The chamber insert for the rifle barrel only is present, it, the barrel retention nut and the removable insert are numbered "17", as-is the side of the barrel itself, there is no discernible number on the frame but it doubtless is present were the arm to be disassembled. Barrel lockup is tight and the mechanism seems to function as-designed and what is likely an antique replacement ramrod is present. The printed text of the original patent is included. This arm is pictured on pages 58-59 of The New York State Firearms Trade, volume 1 © 2003 Rowe. An ingenious and well-made Troy New York gun from this competent maker. (3C9670-167) {ANTIQUE} [David & Lore Squier Collection] (1500/2500) Est. 1,500 - 2,500 284 Rare Samuel Adams Patent Combination Break-Open Sporting Percussion Rifle-Shotaun serial #14, .48 cal,/12 ga., 29 1/2" rifle barrel insert and 28 5/8" shotgun barrel, with a bright very fine rifled barrel showing sharp rifling and with scattered light frosting and some very light pitting in the grooves. The shotgun barrel rates about very good showing perhaps a bit more light oxidation and light pitting. There is no chamber insert present for either shotgun or rifle barrel (replacements would be extremely simple to make for any modern gunsmith with machinery). The barrel shows remnants of a damascus twist pattern its full-length, now primarily a pewter gray patina, with scattered light oxidation staining and some light pitting. It features a simple bead style front sight and a scant v-notch rear and is neatly marked "Samuel Adams Patent" to the rear of the sight. The balance of the metal surfaces are similar with light oxidation staining and overall very simplistic foliate engraving, the back action lockplate maker marked with "Troy NY" on the right barrel pivot arm. There is light foliate engraving on the long buttplate tang with gamebirds at the very heel and a bit of engraving on the bow of the triggerguard. The American black walnut stock rates very good with much original varnish and the expected light dings and handling marks from a field-used arm, a small divot at the point of comb. The forend is similar showing a bit more wear with a small chip forming at its rear, which may have been re-applied. There is a lightly engraved German silver nosecap and a lightly engraved German silver ferrule encircling the rear of the forearm. The lock functions well mechanically, the gun locks up tightly and a brass-tipped steel ramrod is included, which may be original equipment although it fits the thimbles sloppily. The barrel insert and barrel proper are both numbered alike. Samuel Adams started off in Springfield Massachusetts, later moving to Troy New York, there is speculation as to whether he is the "Samuel Adams" that later lived in Battle Creek Michigan but it is surmised they are one and the same. A very attractive example of these innovative percussion arms. (39670-164) {ANTIQUE} [David & Lore Squier Collection] (1500/2500) Est. 1.500 - 2.500

285	Remington Hepburn No. 3 Short Range Creedmoor "C" Grade Rifle
	serial #221, .38-45 Rem. Special, 28" part round part octagon barrel with
	a bright excellent bore. This is an extremely handsome rifle which is
	equipped with a period full-length Malcolm telescopic sight in original
	adjustable mounts. This is an early rifle which bears the "E.
	REMINGTON & SONS" address on top flat of barrel. The rifle has
	matching numbers on the tang, barrel and end grain of buttstock, the
	forend is numbered "883". Both stocks are of English walnut and they
	match in color, grain and condition and both fit perfectly. The rifle is
	configured with a checkered horn shotgun buttplate and matching horn
	forend tip. The condition of the rifle is very fine with the barrel retaining
	97% original blue overall with one area of light oxidation staining on the
	left side of the barrel at muzzle. The frame retains 95% original color
	case-hardened finish which has just ever so slightly toned and remains
	quite vivid. There are a couple dings in the top edge of the action to left
	of breechblock. The checkered pistolgrip buttstock and forend rate
	excellent with 95% original finish remaining and with sharp checkering.
	The scope is mounted with a windage adjustable front mount in the front
	sight dovetail and an elevation adjustable rear mount in an added
	dovetail just ahead of the frame; the rear sight dovetail is presently
	vacant. The condition of the scope is excellent with 95% original brown
	finish with Malcolm's maker mark on top of scope at rear mount. The
	optics are a little dirty but the crosshairs are fully intact. This rifle is
	illustrated and discussed in Rowe's Remington's No. 3 Hepburn on
	pages 124 & 125. This is a very handsome scoped Hepburn rifle.

This is a rare factory double set trigger rifle manufactured in 1899, it is all-parts-matching with "768 XX" on the interior of the lower tang and "768" marked on the interior of the buttstock and buttplate. The no. 3 weight barrel retains perhaps 98% plus original blue with some slight thinning and edge wear along the octagon portion and at the muzzle, the two-line address and caliber marking remain crisp. The lever has toned to gunnetal gray with nice remnants of case-hardened color, the frame retains near 99% original blue with some small blemishes and the beginnings of some edge wear and thinning along the tang, there are very light scratches that do not penetrate the surface with all factory markings remaining strong. The smooth finely-figured XX Grade walnut stock and forend with ebony inlay are very good as having some added varnish, two small repairs both sides of the wrist at the frame, a non-flexing superficial crack near the tip of the top tang and another around the toe. There are the expected tiny chips and handling marks from the years with awesome feathercrotch figure throughout, all the aforementioned blemishes do very little to detract from the beauty of the wood and are for the most part unobtrusive and hard-to-spot. The rifle is equipped with special order Lyman No. 47 Windgauge adjustable
286	Rare Special Order Winchester Model 1885 Semi-Deluxe High Wall Rifle serial #83650, 38-55, 30" half octagon half round barrel with an excellent bore. This is a rare factory double set trigger rifle manufactured in 1899, it is all-parts-matching with "768 XX" on the interior of the lower tang and "768" marked on the interior of the buttstock and buttplate. The no. 3 weight barrel retains perhaps 98% plus original blue with some slight thinning and edge wear along the octagon portion and at the muzzle, the two-line address and caliber marking remain crisp. The lever has toned to gunmetal gray with nice remnants of case-hardened color, the frame retains near 99% original blue with some small blemishes and the beginnings of some edge wear and thinning along the tang, there are very light scratches that do not penetrate the surface with all factory markings remaining strong. The smooth finely-figured XX Grade walnut stock and forend with ebony inlay are very good as having some added varnish, two small repairs both sides of the wrist at the frame, a non-flexing superficial crack near the tip of the top tang and another around the toe. The action retains about 85-90% case-hardened colors quite vibrant along the sides and protected areas around the triggerguard that still show some protective lacquer, with areas muting to gray and showing some mild freckling. The hammer and breechblock retain about 95% original bright blue showing some mild thinning and the sides of the trigger and many of the screw heads show nice fire blue. The front surface of the trigger has been thinned out slightly and the frame shows a 1" welded repair running from the top edge to the uppermost screw. The barrel shows crisp Remington Arms Co. address and is marked "38 40" ahead of the forend tip. The rifle is fitted with a brass Swiss buttplate that has toned to a nice ocher patina and has the correct shape and style but the profile as it meets the stock is slightly different. The buttplate is un-numbered but appears to be factory. The checkered pistolgrip walnut buttstock and smooth schnabel forend with ebony tip insert are stamp-numbered to the gun and remain in very fine condition retaining about 95% original finish that is thinning somewhat along the forend, there is a small ding and scuff along the toe line and some other minor handling marks. The stocks show nice raised grain and the checkering remains crisp. There is a brass-filled hole in the bottom of the forend just ahead of the action, probably where some			oxidation with strong rifling throughout. The metal surfaces of this revolver have mostly toned to a deep plum-brown patina showing some scattered small areas of old oxidation staining, some light pitting along the right side barrel and a few old dings along the cylinder edges. There are some areas of good original bright blue adjacent to the hammer and behind the recoil shield. Some of the screw heads show light to perhaps moderate slot wear and the hammer and latch show strong silvery case-hardened patina. The barrel address and patent dates remain completely intact and strong along with the proper "U.S." stamp on the rear rib, small "A" on the cylinder flute, left side topstrap and frame and small "P" on the right side bottom edge of barrel and behind the right side recoil shield. The smooth walnut grips remain in good condition, the right panel showing some neatly repaired small chips and thin crack near the base along with some scattered light dings and edge wear. The grip fit to the frame remains quite nice overall, the right panel is appropriately stamp-numbered to the gun and the left shows the faintest ghostly outline of the boxed cartouche. Barrel-to-frame fit shows some moderate play and the action seems to function well mechanically with solid timing and lock-up a little loose. This revolver is listed by serial number in the survey of known government-purchased No. 3 revolvers and remains a good example of a rare and desirable arm for the

	way down its length. The barrel is a mix of dull pewter gray and plum		handsome rifle however the assembly numbers do not match. The rifle
	patina, showing some sparsely scattered spots of oxidation staining and		shows assembly codes "2607 XXXSBC" on the left side of the lower
	scattered light pitting, but it is unobtrusive. The frame and lockplate are		tang, the top tang inlet of buttstock shows assembly number "394" and
	a pewter gray case-hardened patina with some speckles of oxidation		the forend channel has the full serial number stamped in a small later
	staining here and there and some scattered light pitting. The arm		looking fonts. When the stock is removed from the rifle the lower tang is
	features a pewter nosecap and brass buttplate and patchbox and the		a tad loose which leads us to believe that the stocks are correct and the
	smooth walnut buttstock rates very good to fine with much original		trigger and lower tang has been replaced. When mounted, the stock is a
	varnish and the expected light dings and handling marks from the years.		little loose on the top but it is our belief that this is a result of the tang not
	The forend rates very good showing a bit more wear, with the		being the original that was fitted to the gun, as the stock will fit nicely
	associated light dings and handling marks. The original front sight is		when not screwed to the lower tang. The rifle appears to be originally
	intact while the rear has been replaced with a correct blued reproduction		scoped with this Malcolm full-length scope from the factory as there are
	sight. The arm is equipped with double set triggers and functions well		no other dovetails and the tang does not show any evidence of having a
	mechanically. There is a single factory drilled and tapped hole atop the		tang sight installed. The condition of the rifle is fabulous with the barrel
	tang for mounting of a peepsight and the barrel and frame are numbered		retaining about 95% evenly thinning original blue finish overall just
	alike. A fine example over all with an uncommonly nice bore (3A9721-7)		beginning to blend with a smooth brown patina where thinning. The
	{ANTIQUE} (2500/4000)		scope retains 95% lovely original brown finish with maker marking
	Est. 2,500 - 4,000		remaining crisp at rear mount. The action retains 97% brilliant original
308	Joslyn Model 1864 Breechloading Carbine		color case-hardened finish with some tiny scattered specks of light
	serial #15076, 52 RF, 22" barrel with a bright very fine bore showing a		oxidation staining on the left side. The checkered pistolgrip buttstock
	little light pitting at the muzzle and crisp rifling throughout. The barrel of		and forend are of beautifully figured American black walnut and feature
	this carbine retains perhaps 75% original blue taking on a deep gray		a cheekpiece on left side of stock, a rounded pistolgrip with ebony insert
	tone, some scattered light dings and areas of deep plum-brown patina		and schnabel tipped forend, also with an ebony insert. The stocks rate
	with no visible markings. The remaining metal surfaces have toned to a		excellent with 95% original finish overall. There are just the normal light
	pleasant deep gray-brown patina showing some sparsely scattered light		handling marks and one round impression on the left cheek. The Swiss
	oxidation staining and remnants of silvery case-hardened patina lurking		buttplate is aluminum and fits very well with some scattered casting pits
	about the protected areas of the lockplate, hammer and breechblock.		visible on its exterior. This is an extremely attractive High Wall which
	The patent markings on the back surface of the breechblock and Joslyn		remains in a very fine state of preservation. (1E9670-15) {ANTIQUE}
	address with 1864 date on the lockplate remain mostly crisp and clear		[David & Lore Squier Collection] (6000/8000)
	and the buttplate tang is stamped with "US". The smooth walnut stock	311	Est. 6,000 - 8,000 Early Colt Model 1862 Police Percussion Revolver
	remains in very good plus condition showing somewhat worn finish, a	511	
	thin 1 1/4" crack at the upper tang, tiny crack at the heel and some scattered light dings. There are no visible cartouches and the stock		serial #1415, .36 cal, 5 1/2" round barrel with a mostly bright very good bore showing some overall light oxidation and mild pitting with strong
	otherwise retains very nice metal-to-wood fit. The saddle bar and ring		rifling throughout. The barrel and cylinder of this attractive first
	are intact and the action seems to function well mechanically. A solid		year-production revolver retain about 40% plus original bright blue
	example of these popular Civil War carbines, this one a commercial		strongest in the cylinder flutes and underside of the barrel with the

Lot Title/Description

321 Burnside Rifle Co. Fifth Model Civil War Carbine Issued to Company C. 12th NY Volunteer Cavalry & Part of a Consecutively Numbered Pair serial #18723, .54 cal, 21" barrel with a bright very good plus bore showing some light pitting and moderate oxidation nearer the breech and otherwise crisp rifling throughout. The barrel of this carbine retains perhaps 90% evenly thinning original blue toning slightly to a mild gray patina along with some scattered mild freckles and a few light dings, one at the top edge near the muzzle that is unobtrusive. The frame, lockplate and breechblock release lever show strong vibrant case-hardened colors throughout, perhaps 80-85%, muting slightly to a deep gray patina with some mild brown freckling. The breechblock parts retain about 90% original bright blue showing some mild overall flaking, some specks of old oxidation staining and a few light dings. The buttplate and barrel band are toning to a silvery case-hardened patina and the upper tang retains generous brilliant fire blue flaking to gray-brown. A couple of screw heads show light slot wear and some of the markings are somewhat lightly struck but are otherwise intact and legible. The smooth walnut buttstock and forend remain in about very good plus condition as lightly refinished long ago, the forend showing a repaired 1 1/2" sliver at the top left edge, some scattered light dings, handling marks and the finish somewhat unevenly applied along the butt. The buttstock retains two visible cartouches along the left side wrist and all original hardware is intact. All of the serialized parts are matching, the barrel having been re-struck in the same font no doubt due to an honest factory error and the action seems to function well mechanically. This carbine is listed in Springfield Research by serial number as being issued to Company C, 12th NY Volunteer Cavalry on September 15, 1863. The regiment served in the Department of North Carolina and undertook extensive patrols and maneuvers throughout the state from 1863-1865 and took part in the Battle of Wyse Fork. During its two years of service, the unit suffered 209 causalities to battle and disease. An attractive example with some strong original condition, this carbine is consecutively numbered with the next lot. (13C9833-51) {ANTIQUE} (2000/3000) Est. 2,000 - 3,000 Burnside Rifle Co. Fifth Model Civil War Carbine Part of a Consecutively 322 Numbered Pair serial #18724, .54 cal, 21" barrel with a partially bright about very good bore showing some light pitting and oxidation throughout with otherwise strong rifling. The barrel of this carbine retains about 70% thinning original blue that is toning to a deep plum-brown patina approaching the muzzle also showing a few sparsely scattered spots of old minor oxidation staining and light handling marks. The frame, lockplate and breechblock release lever are toning to a mottled gray patina showing scattered deep brown speckling, flakes of silvery case-hardened patina and generous smoky colors with some vibrant areas along the left side. The breechblock parts retain about 40% original bright blue mostly along the bottom with the balance flaked to gray-brown patina showing a number of old light dings along the bottom of the lever and top of breechblock. The buttplate and barrel band are taking on a silvery case-hardened patina, a couple of screw heads show light slot wear and a number of them retain strong original blue. The markings have softened somewhat from the years but remain completely legible. The smooth walnut buttstock and forend remain in very good plus condition having darkened somewhat from the years and showing a strong oil finish with scattered light dings, a couple small abrasions and a few repaired thin drving cracks along the butt. The buttstock retains two good cartouches on the left side wrist and all original hardware remains intact. All of the serialized parts are matching, the barrel having been re-struck in the same font no doubt due to an honest factory error (similar to the previous carbine) and the action seems to function well mechanically. Unlike its compatriot this example is not listed in Springfield Research though it of course possible it was issued to the same unit. A nice Burnside carbine and an interesting opportunity for the collector to acquire a pair of arms rarely seen consecutively numbered. (13C9833-52) {ANTIQUE} (2000/3000) Est. 2,000 - 3,000

323	Maynard Second Model Civil War Carbine by Mass. Arms Co.
	serial #24389, .50 cal, 20" round barrel with octagonal breech and a
	bright excellent bore. The barrel of this handsome carbine retains nearly
	90% original blue with the underside approaching the muzzle toning to
	plum-brown patina and showing some scattered light pinprick pitting and
	some areas of old minor oxidation staining. The action retains a similar
	amount of vibrant case-hardened colors with an area muting to a
	pleasant mild gray patina along the right side and showing some old
	oxidation staining along the lower tang, lever and some of the high
	edges. The buttplate has mostly toned to a dark plum-brown patina
	showing some scattered flakes of bright blue and the small action parts
	retain strong original bright blue with some scattered light oxidation
	staining. The frame markings remain intact and strong and the various
	major components are stamped with small sub-inspector marks. The
	smooth walnut buttstock remains in about very fine condition retaining
	most of its arsenal oil finish and showing some scattered light dings and
	minor scuffs, more noticeable along the left side which also retains two
	crisp inspector cartouches. The original sights and saddle ring are intact,
	the barrel locks up well and the action seems to function well
	mechanically. A very attractive Second Model Maynard. (13C9833-10)
	{ANTIQUE} (2000/3000)
	Est. 2,000 - 3,000
324	Smith Civil War Percussion Carbine by American Machine Works
	serial #6675, .50 cal, 21 5/8" part round part octagon barrel with a bright
	excellent bore. The barrel of this carbine retains about 95% original blue
	showing some very mild toning to gray-brown, a few sparsely scattered
	specks of old oxidation staining and some light handling marks. The
	barrel shows remnants of some hardened preservative that would
	probably clean up if one wished. The action shows the same old
	preservative throughout and retains perhaps 92% original vibrant
	case-hardened colors with areas muting to smooth silvery gray patina.
	The triggerguard and buttstock collar retain a similar amount of bright
	blue showing a little brown freckling and some handling marks along the
	bow of the guard while the top latch retains about 94% brilliant bright
	blue showing some scattered light oxidation staining. The left barrel flat
	shows a strong sub-inspector stamp and the markings on the left side of
	the action remain completely intact and strong, the maker markings
	below the sling bar obscured somewhat by preservative. The smooth
	walnut buttstock and forend remain in very good plus condition as very
	lightly cleaned long ago now having darkened from the years with some
	scattered light dings and handling marks. Metal-to-wood fit remains very
	nice and the left side wrist shows a softened inspector cartouche. All
	original hardware is intact, the barrel locks up tightly and the action
	seems to function well mechanically. A very handsome American
	Machine Works Smith carbine. (13B9833-7) {ANTIQUE} (1500/2000)

Very Fine Cased New England Two Barrel Set Underhammer Percussion Rifle by Nicanor Kendall serial #851, .41 caliber rifled barrel and .50 cal smoothbore barrel, both about 30 1/4", the rifle barrel octagonal, the smoothbore barrel part octagon, part hexadecagonal. The rifle barrel rates very fine with mostly bright sharp rifling and some very sparsely scattered light frosting within the grooves. The smoothbore barrel rates very good with remnants of scattered light pitting. Both barrels have light open engraving at the front near the sights, again at the breech and surrounding the makers name, a bit ahead of the rear sight and again at the point of transition on the other barrel. The rifle is sighted with a scant silver blade front and flat-top v-notch rear, step adjustable for elevation, with a simple half-moon silver blade front sight and buckhorn rear on the smoothbore barrel. The barrels retain generous original plum brown, flaking to a near even mix of the pewter gunmetal beneath, with scattered light oxidation, near overall, but it is light in character and unobtrusive. Each barrel is maker marked on the top flat "N Kendall/Windsor VT" and each is properly serial numbered to the frame on its underside, the smoothbore being a Remington "twisted" steel barrel, showing only remnants of the damascus pattern. The barrel frame shows light open engraving on the octagonal sections with dual turned medials and shows Win. Smith's "Smith's Improved Patent Stud Lock" patent marking on the long upper tang, also with light open engraving front and rear. The arm has lovely German silver furniture with a dual spur triggerguard, toeplate, crescent buttplate and nice patchbox, all with lightly chiseled extensions and with light open flowing rudimentary engraving typical of Kendall's arms. The tang of the buttplate is numbered to the gun, there is a lozenge-shaped German silver inlay on the cheekpiece and two open swirls inlaid left and right for the lock mechanism screws. The very close-grain stock appears very much to be of cherry, but possibly butternut, it has been stained a red-russet with a bit of darkening beneath the finish. The left side flared cheekpiece has a dual ribbed edge and the varnish is wonderful showing tiny antique age crackling throughout. Kendall, later of " Robbins, Kendall & Lawrence" fame, had his arms made in the Vermont State Prison, each of the makers paid 32 cents per day, interestingly if one of Kendall's rifles was returned by a purchaser, the craftsman who built the rifle was charged back for it until such time as the arm was made right. This example comes nicely cased in a walnut carry case with brass corners and handle in the lid with a wad punch, ebony handled turn screw, Bush pattern common top flask and a three cavity iron bullet mould casting two smaller projectiles and one of the larger. The sprue cutter is stamped "84", as-is the face of the rifled barrel. The interior shows a fading burgundy baize interior, neatly fitted to each of the arms components, externally the case rating very good with the expected minor dings and handling marks that come from the years. A single ramrod is included that neatly fits both sets of barrels, each of the barrels mounts solidly but turns just a whisker past top dead center. A very handsome two-barrel set, doubtless made for a customer of means, as most of Kendall's arms are very Spartan and very "Yankee", this example nicely embellished and is a two-barrel set to boot. (3C9905-1) {ANTIQUE} (3500/5000) Est. 3,500 - 5,000

Lot Title/Description

Connecticut Percussion Offhand Target Rifle Personal Gun Of Gunsmith Walter Dennis .38 cal, 30" octagon barrel drilled for false muzzle which is turned for starter, showing a bright excellent bore; both the false muzzle and starter are included. The barrel shows strong original plum brown with some smatterings of light oxidation and areas of pitting nearer the muzzle, becoming more moderate on the left and right flats, the false muzzle polished bright and showing only some very light oxidation externally. The rifle is sighted with a globe front sight with simple diminutive lollipop insert and shows some very light engraving near the breech and is maker marked on the left diagonal flat "WL Dennis Maker Bridgeport CT". The breech shows some smoky gray blue case-hardening with light open scroll and is maker marked on the left "WL Dennis/Bridgeport CT". The barrel frame shows some strong original blue along its top surface, left edge and the long tang, flaking on the bottom area where one would normally carry the rifle, showing only light borderline engraving. The tang shows the same open scroll at front and rear and there is a lollipop style sight fitted midway down its length. The lockplate is maker marked and shows a bit of open scroll and is now a duller grav case-hardened patina, sadly showing some light pitting; the hammer shows a nice dragon head at its front with a nice cap deflector swirl and a bit of scroll on its side. The German silver furniture is bright and quite fancy, the single forward spur quard showing nice quality open flowing scroll, with another bit of scroll on the rearward grip flourish and its rear extension. The tang of the crescent buttplate and the toeplate show the same sparse nice quality scroll with the front extension in a nice pineapple finial motif. The rifle is stocked in a nice grade of American black walnut showing lovely burl and crotch figure with a flared left-side cheekpiece. It rates about excellent, the finish flaking a bit along the toeline and with a nice engraved German silver patchbox on the right of the butt. The arm is equipped with double set triggers and a single-acting lock and what is likely a later ramrod is included. Included with the arm is a homemade carry case, with a floral fabric interior, and a placard on the lid with WL Dennis' trade stamp. On the interior is an antique powder tin, a small japanned tin of percussion caps, two conical bullet molds, two swages, a selection of cast projectiles, an old range rod, a few patches, and telescopic sight mounts which fit in the front dovetail and the tapped hole on the tang of the arm; sadly there is no telescopic sight present. Included within is Mr. Dennis' original business card listing "all kinds of repairing done with dispatch" showing a 97 Water St., Bridgeport, CT address. Penciled on the back is written "died in 1878" a short narrative about the business closing, and how the rifle was made by Dennis and kept by his wife and was bought from his son George Dennis who was 86 years old at the time, on June 6, 1957. Also included is an October 17, 1957 dated target from the PAL range in Strafford Connecticut shot by R.C. Hitchcock of Fairfield Connecticut. There are three targets shot with the rifle showing very nice groups. Walter L Dennis was located in Bridgeport Connecticut from roughly 1865 to 1877, his rifles are quality-made and rival any of those made by the New York makers, this gun is no exception. (3C9670-59) {ANTIQUE} [David & Lore Squier Collection] (2500/4000) Est. 2,500 - 4,000

Interestingly, the chamber length was measured using an appropriate plug gauge, the underside of the barrels are stamped 2 1/2", yet under very close scrutiny the chambers do not appear altered. Features double triggers, ejectors and automatic safety with "S" inlaid in gold. A handy little 20 bore double ejectorgun that points well and weighs in at just over 5 1/2 pounds; the following lot is consecutively		engraved bands at the breeches with nice engraving on the rib and rib extension with a gold inlaid numeral "1". The round bodied triggerplate frame is a very pleasing smooth smoky pewter case-hardened color with near overall excellent quality tight English scroll and floral bouquets, showing some stronger trace case colors beneath the fences and their nicely chiseled bolsters, the belly gold inlaid "Dickson's Patent". The long tang triggerguard, safety and top lever show excellent quality blue, "safe" inlaid in gold, the top lever with the numeral "1" inset as well; the gold inlaid "1" is repeated at the Anson forend tip. The straight grip English walnut buttstock and splinter style forend both rate about excellent as very lightly refinished some years ago, metal-to-wood fit still excellent and the checkering is crisp as recut, somewhat coarsely-so, with a few light handling marks in the finish and a diminutive wrist. The length of pull to the checkered butt is 14 3/4" with drops of 15/8" and 2 1/2" and 3/8" cast off. The right barrel shows no wall thickness below .025", most well over that, the left tube shows one spot that is .022", most well over .025" and the arm is a Nitro profed for 1 1/8 ounce 2 1/2" shells, the water table showing the patent use number 1684. The arm locks up tight on-face and functions well mechanically. There is an oval gold monogram plate along the toeline which has been engraved with the initials "JCC". The copy of the factory ledger shows on August the 8th, 1929, guns 7182 & 7183 being made for William Watson, giving the dimensions of each. A very lovely and quick-handling best quality double that really needs to be back afield for fall birds. (3D9720-1)
	along the sides of each tube for most of their lengths, consistent with a field-used arm. The concave rib is neatly matted its full-length and there is tight scroll engraving at the rear of the rib, the barrels V.L. & D. marked and show small bands of engraving at the breech. The frame retains perhaps 97% original color case-hardening which is quite vivid, toning to pewter on the sharp edges. It shows near overall tight flowing scroll with floral patterns on the screw heads and a light foliate engraving on the fences, each flat maker marked. There is excellent original blue on the top lever and safety and the bow of the guard, the long tang fading to plum in the grasping area. The checkerde European walnut scant pistolgrip buttstock rates very fine to excellent showing only a few very light handling marks about the surface, the splinter forend is similar, its iron and nosecap showing some fading case colors. The checkering has mullered borders and the stock features the Auguste Francotte marking just behind the pistolgrip. The length of pull to the grooved horn buttplate is 14 1/8" with drops of 1 3/8" and 2 1/2". The gun locks up tightly on face with dual under bites and Greener crossbolt, with the top lever still slightly right of center and seems to function well mechanically. Interestingly, the chamber length was measured using an appropriate plug gauge, the underside of the barrest are stamped 2 1/2", yet under very close scrutiny the chamber do not appear altered.		engraved bands at the breeches with nice engraving on the rib and rib extension with a gold inlaid numeral "1". The round bodied triggerplate frame is a very pleasing smooth smoky pewter case-hardened color with near overall excellent quality tight English scroll and floral bouquets, showing some stronger trace case colors beneath the fences and their nicely chiseled bolsters, the belly gold inlaid "Dickson's Patent". The long tang triggerguard, safety and top lever show excellent quality blue, "safe" inlaid in gold, the top lever with the numeral "1" inset as well; the gold inlaid "1" is repeated at the Anson forend tip. The straight grip English walnut buttstock and splinter style forend both rate about excellent as very lightly refinished some years ago, metal-to-wood fit still excellent as the checkering is crisp as recut, somewhat coarsely-so, with a few light handling marks in the finish and a diminutive wrist. The length of pull to the checkered butt is 14 3/4" with drops of 1 5/8" and 2 1/2" and 3/8" cast off. The right barrel shows one spot that is .022", most well over .025" and the arm is a Nitro profed for 1 1/8 ounce 2 1/2" shells, the water table showing the patent use number 1684. The arm locks up tight on-face and functions well mechanically. There is an oval gold monogram plate along the toeline which has been engraved with the initials "JCC". The copy of the factory ledger shows on August the 8th, 1929, guns 7182 & 7183 being made for William Watson, giving the dimensions of each. A very lovely and quick-handling best quality

### Lot Title/Description

Lot Title/Description

336	Winchester Model 21 Boxlock Double Ejectorgun
	serial #20371, 12 ga., 28" ventilated rib barrels choked modified and full with excellent bores. The barrels retain perhaps 97-98% original blue
	with some even fading to dark plum toward the breeches and some light
	edge wear. The boxlock frame fares about the same and retains 97%
	strong original blue with some faint wear to gunmetal on the belly's carry
	points and the lower tang and some freckling on the left fence. The
	checkered walnut capped pistolgrip buttstock with Noshoc pad and
	beavertail forend are very good plus with scattered light handling marks
	and two cracks, one hairline and one more prominent, running from the
	frame to the rear of the forend metal and some added varnish some time ago, the evidence being a couple thicker finish areas on the forend
	and an errant small run coming down from the comb. The finish does
	nothing to detract from the fantastic grain figure in each piece,
	particularly the dark feathercrotch pattern going diagonally across the
	left-side butt, a professional wood man could easily tone down the finish
	on each if one wished. The length-of-pull to the single selective trigger is
	13 3/4" with drops of 1 5/8" and 2 1/2", the safety is non-automatic and
	the ejectors are strong. A solid collector's piece that could benefit greatly from a little TLC. (22B9789-17) {C&R} (2500/4000)
	Est. 2,500 - 4,000
37	Wonderful Charles Daly Diamond Quality Double Ejectorgun
	serial #1514, 12 ga. (2 1/2"), 28" Excelsior Witten steel barrels choked
	improved cylinder and a light full or tight modified, showing bright very
	fine to excellent bores, each with a few very sparsely scattered very light
	remnants of oxidation or light pinprick pitting. This is a very attractive
	Lindner made Daly shotgun with some absolutely wonderful engraving.
	The barrels retain about 98% plus exceptional quality restored rust blue with the makers name engraved on the lovely concave rib; there are
	light engraved bands on the breeches and on the rib extension. The
	scalloped boxlock sideclipped frame is lovely and retains perhaps 80%
	original color case-hardening, quite vivid in spots and muting in others
	with toning to silver on the sharp edges of the sideclips and front belly of
	frame. It features overall excellent quality tight scroll with some banknote
	filigree and bordering and the makers name in riband left and right. The underside of the frame shows a sporting dog and pheasant scene of the
	finest quality, with flying waterfowl on the bow of the guard, it too with
	overall lovely tight scroll. The checkered round knob pistolgrip European
	walnut buttstock rates excellent with all its original varnish showing only
	light dings or handling marks very sparsely scattered about its surface. It
	features checkered cheeks with dropper points and the checkered
	panels are flawlessly executed, with the typical oval ebony inlay on the
	bottom of the pistolgrip proper. The butt features a nice pinched comb,
	unengraved silver monogram plate along the toeline and a solid 1" pad giving a 14 1/4 length of pull to the front of the two neatly checkered
	triggers, showing drops of 1 1/2" and 2 1/8". The lovely engraving
	continues onto the iron and the forend rates very fine as well with its
	horn tip intact and the very beginning of the tiniest crack at the rear near
	the iron. The gun locks up tightly on face with the top lever still right of
	center and features double triggers, ejectors, pin-style cocking indicators
	and automatic safety with "safe" inlaid in gold. The gun seems to
	function well mechanically for the most part, if the left trigger barrel is
	fired first ejectors work properly, if the right tube is fired first both trip simultaneously, timing is no doubt an easy issue any 'smith of any
	talent. A very handsome Diamond Quality Lindner Daly with top-notch
	engraving and nice dimensions. (3D9720-2) {C&R} (3000/5000)
	Est. 3,000 - 5,000
38	Exceptional Winchester Model 21 Smallbore Skeet Ejectorgun
	serial #18048, 20 ga., 26" barrels choked WS-1 and WS-2 with excellent
	bores. The metal surfaces retain 99% strong original blue, with "SKEET"
	marking just in front of the triggerguard. The gold single selective trigger
	retains all its original finish. The finely-figured checkered American black
	walnut capped pistolgrip buttstock and beavertail forend with standard diamond checkering pattern are excellent as expertly and lightly-cleaned
	leaving a wonderful satin finish and having fantastic feathercrotch figure
	radiating down from the comb and flowing nicely along the forend. The
	length-of-pull to the checkered butt is 14" with drops of 1 9/16" and 2
	1/2", the safety is automatic, the ejectors very strong and the barrels
	lock-up tight and are on-face. The Model 21 is known as both a solid
	and reliable field gun as well as a sought-after collectible, this is a
	fantastic-looking smallbore sure to check both of these boxes.

Prussian Jaeger Style Flintlock Rifle With Wootz Steel Barrel .72 cal., 34 1/2 part round barrel with a straight-rifled bore which shows light oxidation its full-length. This is a very well-made rifle that seems to have had an interesting life. It clearly started off as a Prussian Jaeger rifle, no doubt stocked to the muzzle, and at some point in its history has had a nice quality Mediterranean-Turkish style damascus steel barrel fitted by a gunsmith of some talent. The barrel is a dark brown and light pewter with a wootz damascus pattern its full-length and with heavy silver and gold-toned chiseled damascening near the muzzle, flanking the half moon silver blade front sight, with a number of medials. Halfway down its length the barrel transitions from round to dodecagonal with Middle Eastern style geometric silver and gold-toned chiseled inlays, this continuing at the breech end of the barrel for about 7 1/2", with the same silver and gold-toned overlays and damascening, with four silver stars, two of which have orange coral inlaid within. The European lockplate shows beveled edges and has relief chiseled game scene engraving with scroll on the swan neck cock, faceted pan and unbridled frizzen, the frizzen spring lightly chiseled with a foliate tail. The arm retains its heavy chiseled-in-relief Germanic hardware with chiseled rococo tailpipe, triggerguard front extension, with similar sideplate and buttplate tang. The bow of the guard, sideplate and heel of buttplate all showing deep chiseled game scenes with stags and hounds. The European walnut stock rates very good with some nice open foliate carving in the area of the forestock, to the right of the comb and to front and rear of the square bottom Jaeger style cheekpiece. The arm was likely short-ened when the later barrel was fitted and the stock nose narrowed and the horn forend tip re-fitted. The stock rates very good showing older repairs to a number of cracks along the forend and barrel channel, a sliver or chip missing along the left of barrel channel and an older spliced repair to a moderate chip along the edge of the cheekpiece, with some filed-in splices in the highly figured wood of the butt, perhaps done when the arm was constructed. The lock functions well mechanically and the arm is equipped with a single trigger and there is an antique bone-tipped ramrod included, retained by simple thimbles soldered to the underside of the barrel. Really a very interesting amalgam of these two gun cultures, the original craftsman who built the Jaeger arm was gifted, the fellow who made and fitted the barrel a master of his trade as well. (3F9670-310) {ANTIQUE} [David & Lore Squier Collection] (4000/6000) Est. 4,000 - 6,000

Antique Burl Walnut Cylinder Top Desk The Personal Property of William B. Ruger Sr. This is a lovely Eastlake-style cylinder top kneehole desk that was owned and used for years by William Batterman Ruger Sr. who needs no introduction here. The desk is constructed of oak with a lovely walnut burl veneer, the hidden interior bones constructed of pine. Dating to the 19th Century and once owned by Attorney and U.S. Senator Chancey Mitchell Depew, this is really a fantastic example of the cylinder design exhibiting high craftsmanship and attention to detail. The top cylinder and work surface of the desk is set on two pedestals of four drawers each, the right bank modified during the period of use into a single top drawer with simple four position vertical file beneath, suitable for ledger books or similar types of files, hidden beneath pivoting door which mimics the façade of the other drawers on the piece. The center cabinet section behind the kneehole has double doors, the left features a hidden fastener which, when the door is unlocked serves to free it for opening (currently does not function). The edge of the pedestals flanking the drawers show small incise-carved pillars accenting the raised burl veneer panels and the drawer pulls are cupped under-cut nickel silver-colored art deco-era replacements, each with a small geometric motif cast-in. The upper cylinder frame and work surface area of the desk features four oak cubbies, each to left and right, with lightly carved facade accents, these mounted above the four functional drawers with button accented pulls and a larger open center cubby. There is a pull-out working surface with five dummy-front drawers at its rear, which match identically the functional drawers above them. These are concealed when the writing surface is slid back into the desk for locking of the complete unit, and are exposed giving the appearance of eight drawers when the work surface is deployed. There is a leather writing surface set in the center of the pullout work surface, with embossed inner edge, the outer edge embossed with gold imprinted open foliate and floral decoration, the surface proper measuring 44" by 17 1/4" in depth, the surface showing a couple minor scuffs but remaining in excellent condition overall. There is a keyed lock atop the façade which actuated an automatic locking system that locks the pivoting top of the desk and left bank of drawers shut; the interior locking bar was removed years ago and it is currently not functional but could likely be restored if one wished. There is a short 5" façade atop the top-most flat surface of the desk, also showing two very nice raised burl panels with a circular carved oak "bull's-eye" between the two, a stepped oak grooved pillar above this. The overall condition is about excellent showing much original varnish with some light wear here and there, perhaps the very sparsely scattered very light drying crack, but drawers, pivoting top, work surface and all doors are fully functional. The outside dimensions of the desk are 60" wide by 50" to the top shelf, 55 3/8" to the top of the rear accenting façade. The desk is 31 1/2" deep when the writing surface is stowed, with work surface extended it is roughly 43" deep. British architect and furniture designer Charles Eastlake was responsible for "The Eastlake Movement" generally considered part of the late Victorian period. Eastlake felt that the furniture in people's homes should be as good looking as it was functional and should be made by craftsmen who enjoyed their work. Included with the desk is a copy of Ruger & His Guns in-which the desk is pictured; a copy of After the Hunt, The Art Collection of William B Ruger, a black and white glossy photo of Bill Ruger holding a Ruger Blackhawk, the desk pictured over his left shoulder: a color photo of the desk in Ruger's office in Connecticut (the identical image used in the book); and a glossy color photo of Ruger and his son Tom in front of the desk. Also included is a May 12, 2020 dated hand-written statement in blue ball point pen from Caroline Ruger Vogel, Bill's daughter, authenticating the desk and a very nicely made custom-engraved plaque mentioning that the desk belonged to Ruger and that it was used by him at the Southport office from 1959 until his retirement in 2000; it is unfastened and unmounted but includes brass screws should you wish to mount the plaque somewhere on the desk. This desk is well-documented, published and has unquestionable provenance. This would be the ultimate centerpiece for the advanced Ruger collector. (39798-1) (4000/6000) Est. 4,000 - 6,000

349	Scarce Belgian Model 1877 Gendarmerie Double Barrel Rolling Block
	Pistol by Nagant serial #1692, 9.4mm Nagant, 5 1/2" barrels with bright near excellent
	bores. The metal surfaces of this interesting pistol retain about 90%
	original blue showing some moderate high edge and holster wear, an area of mild dings on the left side frame, and some smaller dings and
	handling marks scattered about. The hammer, breechblock and trigger
	retain generous amounts of bright fire blue, remaining particularly
	brilliant along the sides showing some moderate overall silvering, light freckling and a tiny spot of pinprick pitting on the right side breechblock.
	The action pin retainer plate is toning to a pale straw tone and a number
	of the screw heads also retain remnants of fire blue. All markings remain
	intact and strong with "EM & L NAGANT / LIEGE" and "BREVET / NAGANT" on the right side frame, "W / 1692" on the butt and small
	Belgian inspector stamps throughout. The checkered walnut grips are
	stamp-numbered to the gun and remain in about very good plus
	condition having darkened somewhat from the years and showing a few scattered lightly chipped points and some overall light dings. All of the
	serialized parts are matching, the lanyard ring is intact and the action
	seems to function well mechanically. Nagant's improvements of the rolling block action include rebounding hammers and a unique single
	mechanical trigger. A very fine example of these desirable Belgian
	police pistols, about 2000 of which were produced. (13B9670-487)
	{ANTIQUE} [David & Lore Squier Collection] (1800/2200) Est. 1,800 - 2,200
350	Belgian Model 1877 Gendarmerie Double Barrel Rolling Block Pistol by
	Nagant
	serial #4480, 9.4mm Nagant, 5 1/2" barrels with mostly bright very good bores showing some scattered areas of light pitting and mild oxidation
	with otherwise strong rifling throughout. The metal surfaces of this pistol
	have mostly toned to a deep plum-brown patina showing some sparsely scattered light dings and areas of old minor pitting. The hammers and
	breechblock retain hints of bright fire blue in the protected areas, the
	screw heads show some light slot wear and all markings otherwise
	remain intact and strong with "EM & L NAGANT / LIEGE" and "BREVET / NAGANT" on the right side frame, "W / 1692" on the butt, Remington
	patent on the left side frame and small Belgian inspector stamps
	throughout. The checkered walnut grips are stamp-numbered to the gun and remain in very good condition showing overall darkening from the
	years, some scattered lightly chipped points and minor dings. This
	example appears to have been arsenal reworked at some point as the
	external numbers on the hammers and breechblock have been scrubbed and most of the other numbered parts appear to be re-struck.
	The lanyard ring is intact and the action seems to function well
	mechanically. Nagant's improvements of the rolling block action include rebounding hammers and a unique single mechanical trigger. A good
	example of these interesting Belgian police pistols, about 2000 of which
	were produced. (13B9857-16) {ANTIQUE} (800/1200)
351	Est. 800 - 1,200 Sharps New Model 1859 Percussion Civil War Carbine
	serial #50008, .52 cal, 22" six-groove barrel with a partially bright good
	bore showing a few scattered rings of moderate oxidation and pitting with otherwise strong rifling. The metal surfaces of this carbine have
	mostly toned to a pewter gunmetal patina with areas along the barrel
	taking on more of a brown patina also showing some scattered light
	dings, small tool marks and areas of cleaned old pitting. All of the markings remain completely intact and actually quite crisp and the inside
	surfaces of the patchbox cover show remnants of color case-hardening,
	crisp sub-inspector stamp and arsenal punch-mark. The smooth walnut stock and forend remain in about very good condition showing some
	scattered dings and mild abrasions, one area a bit more moderate along
	the left side butt, a couple repaired thin cracks at the toe and a repaired
	small chip at the top corner of the stock above the lockplate. Stock fit remains very good overall and there is a faint ghostly remnant of a
	cartouche on the left side wrist. The barrel is matching the frame, the
	saddle ring is missing from the bar but all other hardware is intact including the pellet priming mechanism and the action seems to function
	well mechanically. Included is a nicely made wooden plaque with brass
	plate engraved with the history and particulars of this carbine model. A
	solid honest Sharps carbine with a lot of character. (13A9739-5) {ANTIQUE} (1500/2000)
	Est 1 500 - 2 000

Lot Title/Description

250				
359	Interesting U.S. M1 Garand Rifle by Springfield Armory with Offset	] [3	362	Polish Eagle VIS-35 Semi-Auto Pistol by Radom
	Markings			serial #7532, 9mm, 4 5/8" barrel with a bright near excellent bore
	serial #3794521, 30-06, 24" 5-45 dated Springfield Armory barrel with a	I I	I	showing a couple errant freckles in the grooves and strong rifling
	bright excellent bore. The metal surfaces retain about 96% original dark	I I	I	throughout. The metal surfaces of this fine 1937-dated pistol retain
	parkerized finish with light wear on the high edges and contact points,		1	about 92% original blue showing some silvering due to light high edge
	light thinning with light oxidation staining on the stock ferrule and	( I		and holster wear overall, thinning along the slide stop and grip safety
	handguard metal, and scattered light handling marks. The walnut stock		1	and the slide showing a couple small thin scratches and specks of light
	is in very good plus condition as lightly cleaned with a few scattered light		1	oxidation staining along the high edges that are mostly unobtrusive. The
	impact and handling marks, primarily around the pistolgrip and		1	barrel remains mostly bright showing a couple of mild brown freckles,
	triggerguard on the right side. The stock is marked a largely crisp boxed	I I	I	the grips screws show a hint of minor slot wear but otherwise retain
	"S.A. / N.F.R." and Ordnance Wheel that show light fading near the top		I	most of their brilliant fire blue, the smaller internal parts also showing
	of the marks, a partial circled "P" proof is stamped behind the		1	nice fire blue. All markings remain intact and crisp, the left side slide
	triggerguard, and a small but clear Ordnance Wheel is stamped on the		1	showing the iconic Polish Eagle. The original checkered Bakelite grips
	underside of the pistolgrip; the stock markings are correct for the serial		1	with "VIS" on the right and "FB" are actually more of a deep brown tone
	number of the rifle. The receiver markings are crisp but are curiously		I	under bright light, though not the paler color of the later occupation
	struck off-center toward the right edge, causing it to read "U.S. RIFL /		I	pistols, and remain in near excellent condition showing a few scattered
	CAL. 30 (partial M) / SPRINGFIE / ARMOR". All marked parts are of		1	light handling marks. All of the serialized parts are matching, one correct
	Springfield Armory manufacture and are dated to approximately 1945,	( I		magazine with Polish inspector stamps is included and the action seems
	and the operating rod has not been relief cut. The rifle features a		1	to function well mechanically. A very nice and still quite early example of
	stamped triggerguard, 2-slot gas plug, and the Type 2 "lock-bar" rear	I I	I	these desirable Polish arms. (13C9837-10) {C&R} (3500/5000)
	sight drums. A fine example of a late WWII produced rifle that appears	I L		Est. 3,500 - 5,000
	to have avoided arsenal rework. (14B9807-280) {C&R} [Vincent Coniglio	[3	363	German P.35 (p) Semi-Auto Pistol By Radom
	Collection] (1500/2000)		1	serial #R8154, 9 mm, 4 3/4" barrel with a bright about excellent bore
L	Est. 1,500 - 2,000	ļ l	1	showing strong evident rifling with some very fine frosting and a few
360	Excellent Polish Eagle VIS-35 Semi-Auto Pistol by Radom		1	specks of fine oxidation. The metal surfaces on this type II three lever,
	serial #32930, 9mm, 4 5/8" barrel with a bright excellent bore. This is a		1	non-slotted pistol retain about 85% evenly thinning original blue toning
	stunning 1939-dated pistol retaining about 99% original blue showing		1	to brown with some sparse fine oxidation, light edge and operational
	some very faint silvering along some high edges of the slide and grip		1	wear at the decocking lever and grip safety. The original black
	safety, a hint of silvering from decocker use and a few scattered very		1	checkered plastic grips remain very good plus showing minimal wear. All
	light handling marks. The barrel remains bright, the grip screws are		1	serialized parts are matching and the left side of the slide and frame
	immaculate and, along with the extractor and other small internal parts,		1	have appropriate E/77 and "(eagle) / 623" waffenamt markings, the
	retain almost all of their brilliant fire blue. All markings remain intact and		1	mainspring is un-numbered. Included is a single magazine with (K)
	crisp, the left side slide showing the iconic Polish Eagle. The original		1	marked on the heel of the spine. A nice, honest type II Nazi-occupied
	checkered black Bakelite grips with "VIS" on the right and "FB" on the		1	pistol, (5A9804-20) {C&R] (1200/1800)
	left remain in excellent condition showing just a couple sparsely	I L	20.6	Est. 1,200 - 1,800
	scattered tiny handling marks. The serialized parts are matching, one	3	364	Scarce Steyr-Assembled German P.35(p) Semi-Auto Pistol
	correct magazine with Polish inspector stamps is included and the action			serial #K9028, 9mm, 4 3/4" barrel with a bright near excellent bore
	seems to function well mechanically. This is a truly wonderful pistol that	( I		( apolying a pint of miner treating in the second of the s
	would be peoply impressible to impress to the termination of termination	I I		showing a hint of minor frosting in the grooves and strong rifling
	would be nearly impossible to improve upon and would make an			throughout. The metal surfaces of this desirable late-war pistol retain

Lot Title/Description

365	Wonderful Pair of French Model An XIII Flintlock Cavalry Pistols	] [	367	British Pattern 1759 Light Dragoon Flintlock Pistol with J. & W. Richards
	Captured in the Battle of Albuera with Inscriptions			Lock
	.70 cal, 8" round barrels with lightly oxidized bores. The metal surfaces			.69 cal, 9" barrel with a moderately oxidized bore. This pistol has been
	of both pistols have mostly toned to a pleasant pewter gunmetal patina			re-converted to flint utilizing a correct style antique lock and parts, the
	mixing with areas of darker gray smoothed-over light pitting and some			breech showing a noticeable halo around the enlarged flash hole. The
	other minor handling marks. The brass hardware has toned to a nice			metal surfaces of this pistol show evidence of an old cleaning, the barrel
	untouched ocher patina showing some mild tarnishing and some light			a silvery pewter patina showing some sparsely scattered cleaned light
	dings mostly along the butts. The lockplates of both pistols show			pitting, a bit more moderate nearer the breech. The lockplate is similar
	manufacture by Charleville, the markings being quite soft overall but still			with the pitting a bit heavier overall and partially smoothed-over showing
	mostly legible, the tang model markings are no longer present and there			some fracturing of the frizzen spring. The lockplate is banana-shaped
	are ghostly remnants of proofs at the breeches. The brass parts			with pronounced teat at the rear, bridled frizzen and simple line
	however retain strong markings with nice French inspector stamps			bordering. There is no visible date at the rear but "J & W RICHARDS"
	throughout and the butts with a large "JW" or "IW" engraved in script.			remains legible along with a good "(Crown) / GR" Royal Cypher in the
	The front bands also show a wonderful matching inscription "Taken from			center and any proof marks along the breech are no longer visible. The
	a Polish Lancer / in the Battle of Albuera / Spain, May 16, 1811", clearly done by the same hand and completely consistent with the period. The			brass hardware has toned to a pleasant ocher patina showing a few mild
				handling marks and the ramrod thimble is somewhat loose. The smooth
	walnut stocks remain in about very fine condition showing the overall light dings and handling marks one would expect. One pistol shows a			walnut stock remains in about good condition as lightly cleaned and refinished long ago showing a number of small cracks near the lock and
	tiny hole on the left side below the flat and the other pistol shows a few			sideplate, a number of shallow smoothed-over chips more noticeable at
				the upper tang, a small hole along the right side above the rear barrel
	small drying cracks at the rear lock screw and either end of the lockplate			
	with a small period repair to a 1" crack behind the lockplate. Both stocks			pin and some other handling marks. A simple antique hickory ramrod is
1	retain otherwise excellent metal-to-wood fit with good edges and both			included and the lock remains functional. A good "example" piece of these desirable British martial pistols. (13B9833-57) {ANTIQUE}
1	show a large carved starburst ahead of the triggerguard and a notch behind the lockplate that were certainly done during the period of use.			(1000/1500)
	The ramrod on one pistol appears to be a more modern quality			Est. 1,000 - 1,500
	replacement while the other is original, and both locks seem to function		368	Scottish All-Metal Flintlock Martial Pistol by John Waters
	well mechanically. The Battle of Albuera was an engagement during the		500	.58 cal, 7" round barrel with a lightly oxidized bore. The iron surfaces of
	Peninsular War (1807-1814) which saw Spain, Portugal and Great			this attractive pistol have mostly toned to a mild gunmetal patina
	Britain pitted against the French Empire and its allies for control of the			showing some sparsely scattered small areas toning to brown and some
	Iberian Peninsula; the end result a long and hard-won victory by the			minor smoothed-over light pitting. The breech shows proper period
	coalition. The Battle of Albuera itself apparently had little effect on the			British proof marks that remain intact and strong with "(Crown) / P",
	overall outcome of the war but research confirms that the Polish Uhlan			"(Crown) / IW" maker stamp and "(Crown) / V". The lock is of typical
	unit the 1st Vistulan Lancers did play a major role in the battle and were			simple construction with swan neck cock, unbridled frizzen and lightly
	arguably one of the finest cavalry units in Napoleon's army. The lancers			chiseled frizzen spring and distinctive external half cock notch. There
	single-handedly destroyed three British foot regiments and captured			are some light tool marks along the jaw screw and the cock spur shows
	numerous colors. Evidently the British did make off with at least one pair			an old repair that is unobtrusive. The forward top edge of the lockplate
	of lancer's pistols. A very fine and honest pair of French pistols with			shows assembly hash marks "IIVXX", the internal parts of the lock also
	wonderful inscriptions and history that would make a spectacular			showing visible assembly marks. The 6 1/8" iron belt hook remains
	addition to any antique martial arms collection. (13D9849-3,4)			intact mounted on the left side of the frame. The brass frame has toned
	{ANTIQUE} (4000/6000)			to a wonderful rich ocher patina and remains in very fine condition
	Est. 4,000 - 6,000			showing a thin 1" Y-shaped crack forming at the left edge where the
366	Very Scarce Prussian Model 1742 Flintlock Cavalry Pistol From	1		forend steps down along with some scattered light dings most
	Potsdam			noticeable along the base of the grip and some other minor handling
	.69 cal, 14 1/2" barrel with an oxidized bore. This is a fine uncut example			marks. The stock is equipped with a thin tubular tailpipe that holds what
	of these long Prussian cavalry pistols. The barrel is an overall soft brown			appears to be a proper original ramrod. The half cock notch is somewhat
	patina showing some spots of scattered pitting, its brass blade front			worn but will hold if gently manipulated and the lock otherwise seems to
	sight remains intact. The stepped lockplate with pronounced teat at rear			function well at full cock. This is a very respectable example of these
	is a similar soft brown patina and features a faceted pan with unbridled			desirable Scottish pistols as-used by the Highland Regiments.
	frizzen and is marked "Potzdammagaz", only a portion of which is still			(13B9906-3) {ANTIQUE} (2000/4000)
	visible. The brass stock band, tailpipes, faceted triggerguard, side plate			Est. 2,000 - 4,000
	and a dual-lobed buttcap are all a very pleasing deep ochre patina with		369	U.S. Model 1836 Flintlock Pistol by Robert Johnson
	the expected minor handling marks here and there from the years, the			.54 caliber, 8 1/2" barrel with a lightly oxidized smooth bore. The lock
	lanyard loop on the buttcap is missing leaving only a vacant hole. The			bears standard markings and is dated 1837 and the barrel is marked
	walnut stock rates very fine for its age with crisp edges on the island			"U.S. / N.W.P. / P". This is an early 1837 dated pistol which shows
	carving surrounding the ramrod rib, the stock flats and dovetail tang.			honest service. The lockplate is a medium to dark brown patina with
	There is a small chip along the barrel line ahead of the lock plate and a			some patchy pitting which obscures parts of the marking but it can be
	couple very minor cracks but they are unobtrusive. It exhibits the overall			made out and the date is clearly visible. The brass pan shows a very
	expected dings and handling marks that come from an issued arm but			rich patina while the barrel, triggerguard and other brightly finished parts
	no evidence of cleaning. The oval monogram plate atop the wrist has			show a predominately smooth silvery surface with some scattered very
	been cleaned with no remnants of the original marking remaining. There			light pitting here and there. All barrel markings remain clear and legible.
	is a later replacement ramrod included and the arm will hold on half-cock			The walnut stock shows use and some old added light oil finish but

Lot Title/Description

390 U.S. Model 1896 Krag Carbine Issued to the 1st U.S.V. Cavalry "Rough Riders" serial #68119, 30-40 Krag, 22" barrel with a fair bore showing light pitting throughout and worn rifling toward the muzzle. This historically significant arm was, according to Springfield Research Service, issued to the fabled "Rough Riders"; 1st U.S. Volunteer Cavalry, during the Spanish American War. Mallory and Olson, authors of The Krag Rifle Story, specify on page 253 that it was issued to Private Richard Richards, of Troop G which was recruited in New Mexico and was comprised largely of cowboys. The metal surfaces of the carbine have aged to a blend of dark gray and plum patinas with light high edge wear along with a few scattered small areas of light pitting and light freckling. The bolt displays a light gray patina and the extractor retains remnants of its original fire blue. The Model 1896 smooth black walnut stock and handguard rate very good-very good plus for their age with a light coat of period-added finish, a few hairline cracks around the intact sling bar with ring and the rear of the action, and some expected light handling marks from military service. The left side of the wrist displays the remnants of two boxed "JSA" inspector's cartouches with one appearing to be dated "1897" and the other "1898", a faint circled "P" firing proof is behind the triggerguard and "A.G." is neatly carved into the right side of the buttstock forward of the trap buttplate. The sights remain intact including the "C" marked Model 1896 rear sight, a Model 1901 front sight protector is included and the action of this important piece of U.S. military history appears to function well mechanically. Private Richards of Albuquerque enlisted into Troop G of the "Rough Riders" in Santa Fe and while it is unclear if Richards was in Cuba on the fateful day of July 39 1, 1898, his unit, Troop G, was amongst the first to reach the top of Kettle Hill during the Battle of San Juan Hill. Richards' service records show that he was, along with the rest of the 1st U.S.V. Cavalry, quarantined after the war at Camp Wikoff, N.Y. where they were mustered out of service on September 15, 1898, (23B9807-67) {ANTIQUE} [Vincent Coniglio Collection] (1500/2000) Est. 1,500 - 2,000 U.S. Model 1896 Krag Carbine Issued to Troop M U.S. 6th Cavalry 391 serial #71368, 30-40 Krag, 22" barrel with a bright excellent bore. Springfield Research Service verifies that this historic carbine was issued to Troop M of the "Fighting Sixth" Cavalry for use during the Spanish-American War. The 6th Cavalry arrived in Cuba on June 24, 1898 and despite being pinned down by heavy fire, the troopers managed to take the heights of San Juan Hill on the first day of July which they held until the fourth day of that month. After the end of hostilities, the troopers embarked for quarantine at Camp Wikoff, Montauk Point NY at which point the troops were stationed to various western frontier posts; Troop M was assigned to Jefferson Barracks, MI. This carbine served with Troop M until April of 1900 when it was turned into the depot for arsenal renovation. The barreled action retains about 90% arsenal blue which is evenly thinning along the barrel revealing some faint streaks toning to gray under direct light along with some softened faint pitting around the breech toning to brown, light silvering on the muzzle and a couple scattered tiny spots of loss and light handling marks toning to gunmetal gray. The band and triggerguard retain much of their original blue displaying light handling marks and flaking toning to gray. The loading gate and sideplate retain strong smoky oil-quenched case-hardening with light high edge wear and a few tiny spots of staining and pinprick pitting. The bolt is mostly bright with the handle toning to dark gray while the extractor shows nice amounts of original fire blue which is particularly brilliant on the claw. The handguard is missing and the smooth walnut stock rates fine with a beautiful arsenal finish, a very small and unobtrusive wood-filled arsenal repair with a tiny chip which is behind the intact sling bar and ring along and a few scattered very light handling marks. The stock features the faint remnants of a boxed inspector's cartouche behind the sling bar along with a crisp circled "P" firing proof and "8" inspection mark behind the triggerguard. The barrel is sighted with a blade front and a Model 1896 rifle rear sight, the buttplate features a trap door and the action is characteristically smooth and appears to function well mechanically. Included is the original Springfield Research Service letter signed by Chief Researcher Franklin B. Mallory and photocopies of the Jefferson Barracks depot inventory and inspection report on file with the National Archives. This Model 1896 carbine remains in a fine state of condition and served with the brave men of the "Fighting Sixth" during the campaign to capture Santiago. 392	U.S. Model 1898 Krag Bolt Action Rifle by Springfield Armory
	serial #112668, 30-40 Krag, 30" barrel with a very good plus bore with
	light frosting in the otherwise strong rifling. The loading gate and
	sideplate retain nearly all their original smoky oil-quenched
	case-hardening with some light fading on the high edges and a tiny
	impact mark on the gate below the thumbpiece. The remaining metal
	surfaces retain about 90-95% original blue which is lightly thinning along
	the barrel showing a few scattered small spots of loss toning to
	gunmetal gray with a little light oxidation around the muzzle. There is
	some light flaking and a few small areas of light oxidation on the bow of
	the triggerguard, a few tiny handling marks on the bands, and minor
	wear on the toe and heel of the buttplate. The bolt is mostly bright with
	the handle toning to a lightly-freckled gray patina while the extractor
	shows much of its original fire blue which is quite brilliant on the claw.
	The smooth American black walnut straight grip stock and handguard
	rate very good plus with a nicely-done filled repair in the left wood line of
	the forend and some scattered light handing marks from the years. The
	stock is likely a field replacement as there is no cartouche and there is a
	crisp circled "P" firing proof and "45" inspection mark behind the
	triggerguard. The rifle is sighted with the original blade front and a Model
	1901 Buffington rear, the sling swivels are intact, stored within the trap
	buttplate is a three piece cleaning rod and oiler and the smooth action
	appears to function well mechanically. A very fine example of the Model
	1898 Krag service rifle that is sure to be a welcome addition to your U.S
	martial arms collection. (23A9908-3) {ANTIQUE} (1000/1500)
	Est. 1,000 - 1,500
393	Ornate Dutch Flintlock Officers Fusil by Brandt
	.69 cal., 39" barrel with a lightly oxidized bore. The barrel is a lightly
	cleaned bright silvery gunmetal patina with remnants of light oxidation
	staining scattered about its surface. The convex lockplate is maker
	marked "JC Brandt/Amsterdam" and shows light martial engraving at the
	rear. The swan neck cock is unengraved and it features a bridled
	frizzen. The brass hardware is starting to reacquire a copper-toned
	patina, showing remnants of an old polish many years ago. The
	triggerguard features a Bess-like front teat which is lightly engraved, with
	the same martial panoply seen on the lock, on the bow of the guard. The
	First Model Bess-style serpentine sideplate with pronounced teat at rear
	shows some light engraving while the tang of the flat buttplate shows the
	same martial themed panoplies front and rear, the butt of the plate
	proper with punch-dot stamped initials "RNH" (GNH is also stamped
	beneath this, at a much later date with modern steel stamps). Quite a
	fancy musket, in addition to the engraving there are numerous silver
	wire inlays scattered about, found to the rear of the rear band,
	surrounding the entire bottom metal and the periphery of the buttplate,
	extending fully across the point of comb. The left stock flat shows
	extensive silver wire inlay around the sideplate and flowing scroll silver
	wire inlay around the oval monogram plate atop the wrist, a silver crown surmounting the monogram plate, which is otherwise un-engraved
	showing, only foliate borderline engraving. The stock itself rates very
	good showing an old light cleaning but it was indeed light and has left
	the overall light dings and handling marks one would expect from a
	field-used arm. The lock will hold on half cock but not on full-cock and
	what is likely the original trumpet-shaped ramrod is included. A very
	handsome officers fusil or private purchase musket. (3C9670-2)

394 British Single Barrel Flintlock Fowler by Hawkes 396 Winchester Model 1873 Saddle Ring Carbine About 14 ga., 31 1/4" part octagon part round barrel transitioning to serial #463537B, 44 WCF, 20" round barrel with full magazine and a fair decagonal at the end of the octagonal section, with a small turned bore showing moderate pitting and oxidation throughout along with medial at the point of transition to round showing a very good to fine some bright areas and good rifling. The metal surfaces of this carbine bore which is mostly bright with sparsely scattered oxidation. The barrel show evidence of an old moderate cleaning and retain about 70% of an is overall plum-brown patina showing scant damascus pattern with older reapplied dull blue thinning and toning to plum-brown patina along with scattered freckling and sparse remnants of light pitting. The muzzle simple bead front sight and inlaid platinum bands and single gold band at breech, maker marked in sunken gold panel "LONDON". The stepped shows moderate saddle scabbard wear and the magazine, lever and lockplate and its attendant parts are a soft brown and a dull pewter gray hammer are more of a gunmetal gray patina showing some areas of patina, the plate with the beveled edge and light engraving, marked "S. mottled brown patina. The barrel address and caliber designation on the HAWKES" in gold sunken panel. Features, swan neck cock, water proof cartridge lifter are no longer present, the model marking on the tang and pan and bridled roller frizzen. The balance of the iron surfaces are soft caliber on the barrel are rather soft, but mostly legible and the serial plum brown, the bow of the guard with light floral engraving, the front number is also difficult to discern but appears to be the number listed extension in a pineapple finial with a small starburst on the rear grip above. The plain walnut stocks remain in fair condition as cleaned and swirl; the tang of the buttplate shows light engraving. The English walnut refinished showing a number of lengthy thin repaired cracks at the tip of buttstock rates about very good with coarse checkered wrist, flared the forend, tangs and wrist, one running almost the full-length back from the lower tang to the buttplate but they are mostly camouflaged and shadowline cheekpiece, much original varnish and the expected light dings and handling marks that come from the years; the head has missed at first glance. There is a small filled plug on the right side butt broken off of the single wedge, it remains functional however and retains and some other scattered light dings as well. The lever lock is somewhat the barrel solidly. The arm functions well mechanically and what is likely loose and a few screws appear to be old replacements. The dust cover. saddle ring and proper carbine sights remain intact and the action the original ramrod is included. The shotgun comes cased in a walnut seems to function well mechanically. A salty but desirable old saddle presentation case with Edward London maker label, with accessories including a shot flask, leather-covered nickel top powder flask with fixed ring carbine made in 1893. (13B9746-46) {ANTIQUE} (1800/2200) charger, cleaning rod, powder and shot dipper an assortment of wads Est. 1.800 - 2.200 397 Fine Colt Model 1878 Double Hammergun and some cleaning accessories. The case rates fair-good, the lid's serial #13404, 12 ga (2 3/4"), 32" damascus barrels choked about handle engraved "CG Thornton". An attractive late single barrel flintlock fowler. (39670-447) {ANTIQUE} [David & Lore Squier Collection] improved modified with partially bright good bores showing patches of (1500/2000)old light pitting nearer the breeches, the right barrel with a few more Est 1 500 - 2 000 moderate areas along its length and the left with a very shallow ding at Very Fine Westley Richards Percussion Double Shotgun 395 its top edge of muzzle. The barrels of this handsome 1882-made serial #7604, 14 ga., 29 1/2" barrels with bright excellent bores. This is a shotgun retain about 90% original contrasting blue and plum-brown very handsome British double percussion gun once owned by damascus patterns with most of the loss due to some scattered areas of Philadelphia attorney Jonathan Dickinson Sergeant, the Sergeant family cleaned light pitting, a bit more noticeable along the left side barrel and were Philadelphia "blue-bloods" going back to colonial days. The barrels likely due to poor storage, a few areas of old oxidation staining and light retain a lovely gray and brown twist damascus pattern their full length, handling marks. The barrel rib is unmarked. The frame proper is toning as strong on the barrels as it is on the rib, showing the tiniest bit of to a mix of gunmetal gray and plum-brown patina showing some fading at the muzzles with silvery breeches showing a single inlaid scattered spots of old oxidation staining and generous vibrant colors in platinum band, light open scroll and platinum blowout plugs. The rib is the protected areas. The lockplates retain about 94% wonderful vibrant marked "Westley Richards 170 New Bond St., London" and is sighted case-hardened colors with loss due to some mild oxidation staining, a with a simple bead front and the barrels are British proofed and serial spot on the left lockplate having been lightly cleaned and both retain numbered matching on their underside. The tang shows the same nice crisp Colt markings. The top lever, triggerguard and trigger plate retain quality scroll and is a pewter patina with a bit of light brown speckling. about 95% original bright blue showing some mild flaking to gray-brown The lockplates are very nice showing perhaps 50-60% color and a few specks of old oxidation staining mostly along the triggerguard, case-hardening, muting a bit more on the right plate, each maker a tiny ding on the top lever and some other mild handling marks. The marked and with light sprays of excellent quality tight scroll which screw heads retain much of their lovely brilliant fire blue, the top lever continue onto the flats of the beveled edge hammers; each hammer screw head taking on a fine straw tone. The checkered pistolgrip walnut nose neatly engraved in a gryphon-like face. There are dual ramrod buttstock and forend with ebony tip insert remain in very fine condition thimbles showing damascus pattern and an engraved tailpipe with a showing strong original oil finish, a very tiny drying crack on the right lightly chiseled extension. The long straight tang triggerguard shows side butt and some scattered light dings. The diamond point checkering with neatly mullered borders remains in excellent condition along the strong remnants of original blue on the bow, with excellent quality tight scroll; the front of the triggerplate chiseled and engraved in a pineapple grip, the forend showing a bit more wear with some scattered mild finial extension. The smooth steel buttplate provides a 14 1/2" length of abrasions. Length-of-pull to the smooth steel buttplate is 14 1/8" with pull with nice scroll atop its tang. The English walnut stock rates very drops of 2" and 3 1/4", the arm is sighted with a single large brass bead and the barrels and forend are matching the frame. Lock-up is solid fine with some nice grain figure, coarse checkering and the expected light dings and handling marks that come from a field-used arm. The on-face with the top lever resting about dead center and the rebounding hammers are in-time and function crisply. A very attractive example of barrel is retained by a single wedge through German silver escutcheons these desirable Colt shotguns that generally saw hard use. and the silver oval monogram plate along the toeline is neatly engraved "J.D. Sergeant/Philada". The locks are crisp. in time, and mechanically (13C9746-29) {ANTIQUE} (2000/3000) functional and the original ramrod with screw-off wad pull end is Est. 2.000 - 3.000 included. The arm comes cased in its original walnut makers cased with accessories and makers label on the interior of the lid, ink pen serial numbered to the gun. The interior green baize lining appears to be original in every respect and included therein is a leather shot pouch, leather covered Hawksley powder flask with fireproof screw-off top and four position charger, nipple wrench, leather pouch with spare nipples, a number of cleaning implements, two small japanned tins, one with percussion caps, the other with tallow and a small button hook. What are likely original bore mops are included as well. The flask shows a bit of separation of the seam stitching along its bottom edge, and a bit of a verdigris at the top collar. The case itself rates very good with brass bands affixed to the lid in an effort to stymie age cracking from drying. It features heavy brass corners and Mr. Sergeant's name is engraved in a plaque on the lid; the key is included. Mr. Sergeant was an attorney in Philadelphia, graduating from the University of Pennsylvania in 1842 and being admitted to the bar in 1845. His grandfather by the same name was a member of the Continental Congress, member of the New Jersey Provincial Congress and one of the framers of New Jersey's constitution, eventually becoming the Commonwealth of Pennsylvania's first Attorney General. A very lovely, and doubtless very usable shotgun from this quality British maker that was clearly very well-cared-for by this Philadelphia gentleman. (3C9894-2) {ANTIQUE} (3000/5000)

Lot Title/Description

402 Colt Single Action Army Revolver with Hank Williams Jr. Letter serial #347728, 38-40 WCF, 5 1/2" barrel with a bright excellent bore. The barrel retains perhaps 97% original blue, showing only some very light wear on the left side at the muzzle, the ejector rod housing showing more wear, toned primarily to a pewter along its outer edge, retaining perhaps 90% original blue with one very small spot of light oxidation or extremely light pitting. The barrel itself does show the "Colt Single Action Army 38-40" marking, likely a transitional install, as this is serial number is right on the cusp of the old-style barrel marking (which merely had the caliber stamped) this marking purportedly in full use by 1929. The cylinder retains perhaps 90% original blue with numerous light rotational marks but strong blue within the flutes and one small area with very light pinprick pitting, likely where the gun lay on its side over the years. The frame retains perhaps 95% smoky color case-hardening, more brilliant in the protected areas and along the flats, drifting to a smoky case-hardened blue and gray on the outer edges of the recoil shield and loading gate, the hammer with very good color case-hardening as well. The triggerguard and backstrap retain perhaps 92% original blue, showing light wear and handling marks from the years. A few of the screw slots show some light damage but the principal ones show very good original blue. There is a very neat period addition in the form of a tiny layer of brass, brazed to the top of the front sight blade, providing a very nice "gold bead" sight picture, the blade showing a couple very light tool marks from being dressed post-application. The arm wears a nice pair of checkered walnut grips with recessed silver Rampant Colt medallions, they are un-numbered on their interior but their fit is perfect and they are doubtless original to the gun. The reverse impression of the serial number stamped on the straps can be seen imprinted into the right grip, they appear to have shrunk a tiny bit as the rear corner of the butt is very slightly proud. The arm functions well mechanically and all the numbers are matching including the cylinder, the right side root of the triggerguard stamp with Colts "&" indicating factory service of some kind. Included with the gun is a factory letter addressed to Mr. Hank Williams Jr., showing shipment in March 1924 to the TB Davis Arms Company, firearms distributors in Portland Maine, for the "JF Hill Company", a printing and lithograph firm out of Augusta. The checkered walnut stocks and the balance of the configuration of the arm are confirmed in the letter (save for the sights). There is a hangtag on the gun which reads "Hank Williams Jr." listing the make, model, serial number and the fact that the arm has a factory letter; there is a tiny photocopy of the factory letter affixed to the back of the tag. A very nice, and no doubt very usable, Single Action Army that will continue to appreciate in value, clearly once owned by this talented gentleman who has given us all so much over the years. (3B9696-1) {C&R} (2000/3000) Est. 2,000 - 3,000 403 Colt Single Action Army Revolver with Hank Williams Jr. Letter serial #335549, 38-40 WCF, 5 1/2" barrel with a bright excellent bore. The barrel and ejector rod housing retain about 95% original blue, the loss due to some light outer edge and muzzle wear with perhaps a minor handling mark here or there, the left side with the caliber marking only. The cylinder shows perhaps 90% original blue, with a number of circumferential rotational marks, and three grav stripes of wear which lineup with the flutes, exactly where the arm would lay were it laid down on its side. The frame is guite nice retaining about 98% original color case-hardening, very vivid in spots and toning slightly on the loading gate and outer edge of the recoil shield, and a bit at the front top; the hammer still retains excellent color case-hardening. The backstrap retains perhaps 95% original blue, the triggerguard 97%, each with light wear on the sharp edges and a few very light handling marks. The checkered hard rubber Rampant Colt grips rate very fine, the right grip showing a bit of light wear, they are scratch-numbered to the gun. All of the numbers are matching including the cylinder and the arm seems to function well and lockup properly. The screw heads remain unmolested for the most part, a couple showing a tiny bit of wear, and there are a couple light freckles on the right side of the frame showing old oxidation staining, a couple more along right side of topstrap, which have tiny tiny pinprick pits, but they are unobtrusive. The included factory letter addressed to Mr. Hank Williams Jr. shows shipment in March 1917 to the Wyeth Hardware & Manufacturing Co. of St. Joseph Missouri in a two gun shipment, verifying the configuration of the arm as well. Included with the gun is a small Hank Williams Jr. hangtag listing the make, model, configuration, serial number and the fact that the arm features a factory letter, a small photocopy of that pertinent data on the back of the tag. A very nice pre-First World War shipped 38-40 with some lovely color, still that will continue to appreciate monetarily, but which could still take the occasional trip to the range. (3B9696-2) {C&R} (2500/3500)Est. 2.500 - 3.500

404	Colt Single Action Army Revolver with Hank Williams Jr. Letter
	serial #354074, 45 Colt, 4 3/4" barrel with a bright excellent bore. The
	barrel retains about 95-97% original blue, the only loss being some light
	left side wear, primarily at the muzzle, with some freckles of light
	oxidation which have resulted in very light pinprick pitting, but they are
	small. The ejector rod housing shows wear to pewter along its outer
	edge, the balance good original blue. The cylinder retains perhaps 95%
	original blue, showing a light rotational mark, wear at the leading edge of
	the cylinder consistent with holster carry and one small area of light
	pitting between two of the flutes. The frame is quite honest with perhaps
	90% original color case-hardening, muting in spots to a silvery-gray with
	strong colors at the front of the frame and across the topstrap and
	flanking the hammer, the recoil shield and loading gate faded to silver
	with some oxidation staining on the right side of the frame. The hammer
	shows some very good color case-hardening on left, toning and muting
	somewhat on the right, with very good pale fire temper blue on the
	trigger. The straps and bow have faded primarily to a pewter patina with
	strong original blue around the bow of the guard. The checkered hard
	rubber Rampant Colt grips rate very fine to near excellent, the right grip
	with some slight chipping at the border ahead of the Rampant Colt, each
	with some very minor handling marks at the butt, they are
	scratch-numbered to the gun. All of the numbers are matching including
	the cylinder and the arm features the "Colt Single Action Army" roll
	marking the left side of the barrel, as was proper at this time period. The
	arm times well and locks up properly and the screw heads are
	unmaligned. Included is a Colt factory letter from 1990 addressed to Mr.
	Hank Williams Jr., showing shipment in May 1930 to Hibbard Spencer
	Bartlett & Company in Chicago with two guns, and verifying the configuration of the revolver; also included is a small Hank Williams Jr.
	hangtag with make, model, details, serial number and "factory letter" on
	its face, a very small facsimile of the factory letters details is affixed to
	the rear of the tag. The quintessential Single Action Army in the big 45
	Colt and 4 3/4" "gunfighter length" barrel, this remains a very attractive
	and honest Single Action Army revolver. (3B9696-3) {C&R} (2500/3500)
405	Est. 2,500 - 3,500
405	Special Order Winchester Model 1892 Lever Action Rifle
	serial #48830, 32-20 Win, 24" octagon barrel with a bright about excellent bore which shows a couple spots of very sparsely scattered
	very light frosting. This is a very handsome antique 1892 with a special
	order button magazine. The barrel retains about 90% original blue, the
	loss is due to even fading or toning to plum with wear to pewter on the
	high edges and a bit of oxidation staining at the muzzle, which has left a
	few light pinprick pits. The nosecap retains very good original blue and
	there is some lovely strong pale fire temper blue on the loading gate.
	The receiver shows excellent bright original blue on the flats with the
	belly flaking and toning a bit to plum at the natural carry point near the
	serial number. The top of the receiver retains about 92% original blue
	with strong fire blue on the extractor. Both the lever and hammer retain
	strong color case hardening which has darkened a bit from the years,
	the face of the lever a silvery gray case-hardened patina. The straight
	grip walnut buttstock and forend rate very good to fine with much
	original varnish and the expected light dings and handling marks that
	come from the years, the buttplate a smoky silvery and plum patina. The
	original silver blade front sight is intact as is the Rocky Mountain rear
	and the gun seems to function very well mechanically. Overall a very
	handsome antique Model 1892, all the better with its special order
	magazine tube, and antique to boot! (3B9746-25) {ANTIQUE}

Lot Title/Description

416 Ornate Engraved Remington 11-48 Shotgun by Kurt Jaeger 418 Custom Rizzini Aurum Teutonic Over Under Ejectorgun serial #5837602, 20 ga., 28" ventilated rib barrel choked improved serial #46102, 12 ga., 28" screw-choke ventilated rib barrels with cylinder with a bright excellent bore. This is a stunningly embellished excellent bores. The barrels, lever and triggerguard retain 99% original shotgun by this well-known German master, no doubt done when he blue with border engraving around the breech and splashes of scroll on was at the Ramstein Rod & Gun Club post-war. The metal surfaces the lever and triggerguard. The coin-finishes frame is excellent and has retain about 98% plus excellent quality post-engraving blue. The rib has been extensively-engraved by the Bottega C. Giovanelli Firm, signature been expertly fitted with a nice aluminum ventilated rib by Polychoke is next to the triggerguard. The engraving features wonderful relief game with dual beads, and features nice sprays of open foliate scroll scenes right and left with crisp interlocking floral patterns found engraving to the left and right of the rib. The receiver features extensive throughout. The finely-figured checkered walnut forend with Schnabel tip full coverage engraving with exceptional quality open flowing Germanic and customized buttstock with round knob pistolgrip are excellent, there foliate scroll with the very finest background stippling accenting the are some very minor signs of handling and the grain patterns are engraving wonderfully. The scroll coverage is near full but for game fantastic with subtle fiddleback figure left and subtle crotch figure right. scenes on left and right flats. The left shows two ringneck pheasants, a The stock has been expertly lengthened by the folks at New England hen taking flight and a cock on the run, showing a setter at the rear of Custom Gun, they used a beautiful 1 9/16" piece of walnut to extend the the scene on point, the animals beautifully inlaid and engraved in silver. length-of-pull to 15 5/8" with drops of 1 1/2" and 2 1/2". The safety is The right side game scene is of waterfowl amidst a marsh scene, the non-automatic, the chambers are 3", the trigger is single selective and birds also inlaid in silver, a mallard at the rear of the scene, the two the ejectors are strong. Included is the original hard case with the waterfowl at the front of the scene are missing a small portion of their original Rizzini wooden buttplate and a set of five choke tubes: extra full, inlays, the head of the center one is gone and the body of the forward full, improved modified, modified and improved cylinder. A very attractive duck missing; perhaps something that a professional engraver may be custom shotgun perfectly-suited for a slightly taller-than-average individual. (22C9830-13) {MODERN} [Dr. William C. Nugent Collection] able to rectify. The left side of the receiver is very neatly signed by the engraver below the Remington model designation "Kurt Jaeger Mainz", (2000/2500) the serial number as well neatly hand-engraved and moved to the Est. 2.000 - 2.500 Beretta S-3 EL Over Under Sidelock Ejectorgun bottom forward of the receiver. The aluminum triggerguard as well 419 serial #17825, 12 ga., 26 1/2" solid rib barrels choked improved modified shows the same lovely foliate engraving on its surfaces with the bright aluminum beneath providing a lovely stunning contrast. The bolt and and full with excellent bores. The barrels and lever retain 99% original carrier have been neatly engine-turned and show very little wear, the blue with very faint wear at the muzzle and at the lever's tip with the center of the carrier with a tiny bit of oxidation staining. The stocks maker's mark on the left bolster. The excellent-condition sidelock action. appear to be English walnut and are exquisitely embellished as well, forend metal, triggerguard and lever have been extensively and showing beautiful marbled grain figure throughout and the left side with intricately-engraved with loose floral scroll, more detailed floral motifs a nice rounded cheekpiece. The stocks themselves rate about excellent around the fences and fine-line shading, the signature "U.G." is found to showing crackling varnish finish rather than any mentionable handling the right of the triggerguard. The checkered straight-grip Turkish walnut marks, a few showing atop the comb. The forend is overall relief-carved buttstock and shallow finger-groove forend are very fine to excellent with in a wide oakleaf pattern, again with extremely fine background a very light coat of added varnish and scattered light blemishes, the stippling. The buttstock shows the same excellent quality relief scroll at wood figure is fantastic with attractive coffee and caramel-colored the grip with a very nice pheasant game scene on the right side of the swirling grain patterns. The toe is slightly cast-off with a 14 5/8" length of butt in a somewhat rococo border. The scalloped ebony-colored hard pull with drops of 1 3/8" and 2 3/8". The gun features dial-style cocking rubber gripcap features faux ivory inlays emanating from the center indicators, 2 3/4" chambers, double triggers, Greener-style crossbolt button and the arm has been fitted with a 1" ventilated recoil pad with closure and a non-automatic safety. Just an awesome example of Italian the Ramstein Rod and Gun club name on its rear; the arm features a skill and craftsmanship combining to create a fully-functional work of art 13/2" length of pull. Kurt Jaeger's work is very sought-after these days (22C9818-2) {C&R} (5000/7000) and is becoming more difficult to find, this is a stunning example of that Est. 5,000 - 7,000 420 Merkel 200E Over Under Ejectorgun gifted gunsmiths work. It was no doubt made for some Major or Colonel stationed at the base, who appears to have used it very little serial #47784, 20 ga., 28" solid rib Bohler Stahl barrels choked tight post-embellishment. A wonderful example of the makers art in steel and cylinder in both with excellent bores. The barrels and triggerguard retain walnut. (3B9884-1) {C&R} (2500/4000) near 99% original blue with some very faint wear at the muzzle and a Est. 2,500 - 4,000 crisp maker's mark on the left diagonal bolster. The barrels, forend metal Ithaca Minier Model Grade 4E Double Ejectorgun 417 and frame all show matching "47784" serial number. The scalloped serial #143852, 12 ga., 28" barrels choked improved cylinder in both boxlock frame retains perhaps 70-75% original beautifully-contrasting with bright about excellent bores which show some sparsely scattered case-hardened color with wear to a pleasing gunmetal patina along the very light remnants of light oxidation or perhaps light pitting, the right belly and top tang and the tip of the blued lever toning to silver. The tube shows a couple old raised dents which were well done. The Minier frame also displays crisp scroll and borderline engraving with geometric model is seldom-encountered, even more-so in a graded gun. The patterns on the hinge pin and gold pin-style cocking indicators. The barrels retain about 98-99% excellent quality restored rust blue, the rib checkered walnut straight-grip buttstock and three-piece forend are near with dual beads. The Grade 4 engraved frame and the attendant metal excellent as slightly-modified, there are scattered small blemishes and a parts have been lightly, carefully cleaned and are a silvery gunmetal 1 1/2" piece has been expertly fitted at the butt, the length-of-pull remains a very manageable 14 1/2" with drops of 1 5/8" and 2 3/4", the patina showing the nice early excellent quality scroll and gun dog toe is ever-so-slightly cast-off. The gun features ejectors, double triggers vignettes left and right these grade fours were known for. The motif continues onto the belly with a flying drake mallard duck and a and a non-automatic safety with dual under bites and Kersten crossbolts keeping the lock-up tight and barrels on-face. A solid Merkel for the woodcock on the bow of the guard. There are a few light remnants of some very light pitting, they are sparse and unobtrusive. The straight hunter who enjoys the best in fine German firearm engineering. (22B9818-1) {C&R} (1500/2000) grip American walnut stock rates excellent as carefully refinished many years ago, the checkering pattern neatly chased . It shows the beginning Est. 1.500 - 2.000 of a 1" crack at the right cheek and a repaired chip at the left edge of the lower cheekpiece. The length of pull to the solid red recoil pad is 13 7/8" with drops of 1 1/2" and 2 3/8". The beavertail forend rates excellent as well, its checkering pattern nicely chased and the ebony forend tip intact. The gun locks up tightly with the top lever still right of center and features automatic safety, double triggers and ejectors. Currently the right ejector does not trip, the left works as-designed and the top lever-bolt catch spring is a modern slightly modified replacement, yet works perfectly. A solid and rare Minier-model grade 4E that likely will perform well afield after a bit of attention to the right ejector. (3B9771-6) {C&R} (2000/2500)

The barrel address is fully legible as are numerous sub-inspector's initials which appear on various parts of the revolver. The metal surfaces of the revolver retain about 65% bright original blue finish. The loss is due primarily to flaking which is most prevalent on the right side of barrel and rammer as well as the cylinder. There is one notable ding on the left side of the frame between the screws and a couple more minor dings along the frame edge beneath the cylinder. The hammer shows nice faded original color case hardened finish and the brass triggerguard shows a lovely patina. The two-piece walnut grips rate excellent with virtually all of their original finish remaining, having nice raised grain feel and a perfect cartouche on left grip. This is a very nice New Model Army with odd unnumbered	435	well, the frontstrap being just slightly proud. Interestingly the rear face of the cylinder is numbered "353" but the arm times and locks up well and functions properly mechanically. Really a very attractive smaller bore Single Action Army manufactured in 1906. (3B9908-25) {MODERN} (2000/3000) Est. 2,000 - 3,000 Very Rare Pre-Production Savage No. 4 MKI Enfield Bolt Action Rifle 303 British, 25" six-groove barrel with a bright excellent bore. This is an interesting rifle that, according to the consignor, came out of Springfield Armory. Given the characteristics of the arm it is no doubt a pre-production example likely retained as a sample piece. Production of the No. 4 rifle by Savage began at the end of 1941, this example is dated 1941 and remains un-serialized and is not marked "U.S. PROPERTY". The metal surfaces retain about 96% original dark gray Parkerized finish showing some silvering near the muzzle, some

This revolver is in nickel plated finish and shows a fully visible etched panel on left side of barrel. The metal surfaces of the revolver retain 98% bright original nickel plated finish with just the finest flaking starting on left side of frame. All markings in metal remain crisp and clear. The mother-of-pearl grips are clearly period, fit beautifully and are very likely original. The hammer shows a	435	well, the frontstrap being just slightly proud. Interestingly the rear face of the cylinder is numbered "353" but the arm times and locks up well and functions properly mechanically. Really a very attractive smaller bore Single Action Army manufactured in 1906. (3B9908-25) {MODERN} (2000/3000) Est. 2,000 - 3,000 Very Rare Pre-Production Savage No. 4 MKI Enfield Bolt Action Rifle 303 British, 25" six-groove barrel with a bright excellent bore. This is an interesting rifle that, according to the consignor, came out of Springfield Armory. Given the characteristics of the arm it is no doubt a pre-production example likely retained as a sample piece. Production of the No. 4 rifle by Savage began at the end of 1941, this example is dated 1941 and remains un-serialized and is not marked "U.S. PROPERTY". The metal surfaces retain about 96% original dark gray Parkerized finish showing some silvering near the muzzle, some scattered light handling marks and a few small areas toning to a deep gray-brown patina. The smooth walnut stocks with grooved handguard remain in very fine condition showing a strong armory oil finish with some scattered light dings, handling marks and a small scuff on the underside of the forend near the tip. All components appear to be properly "S" Savage-marked and there is a lightly-struck "P" at the back of the bolt handle, small flaming bomb on the bolt head, and a small flaming bomb and circled "1" at the top right edge of the socket and on the chamber beneath the handguard. The rifle is equipped with early-style parts one would expect including button head cocking piece (again Savage-marked) and Mark I rear and front sights. One
432	revolver is in standard configuration except there is no serial number on the bottom of the barrel and no evidence of one ever being present. The serial number listed was taken from the left side of the gripframe at the butt. The condition of the revolver is very fine. The barrel address is fully legible as are numerous sub-inspector's initials which appear on various parts of the revolver. The metal surfaces of the revolver retain about 65% bright original blue finish. The loss is due primarily to flaking which is most prevalent on the right side of barrel and rammer as well as the cylinder. There is one notable ding on the left side of the frame between the screws and a couple more minor dings along the frame edge beneath the cylinder. The hammer shows nice faded original color case hardened finish and the brass triggerguard shows a lovely patina. The two-piece walnut grips rate excellent with virtually all of their original finish remaining, having nice raised grain feel and a perfect cartouche on left grip. This is a very nice New Model Army with odd unnumbered barrel that appears original in all respects. (1B9833-92) {ANTIQUE} (2000/3000) Est. 2,000 - 3,000 Colt Model 1877 Lightning Double Action Revolver serial #27125, 38 Colt, 3 1/2" round barrel with an about very good bore with a small area of light oxidation. #### Lot Title/Description

Lot Title/Description

Nationale serial #34098, 8mm Mauser, 23" barrel (24 1/2" overall including compensator) with a bright excellent bore. The metal surfaces of this rifle retain about 97-98% original black enamel finish showing a few scattered light flakes along the high edges and bottom of the magazine, some areas of minor bubbling of the finish along the scope body and some other scattered light handling marks. All markings remain intact and crisp and there do not appear to be any import marks. The smooth pistolgrip walnut stock and handguard remain in very good plus condition showing some scattered small but perhaps moderate dings here and there, a few mild abrasions and strong arsenal oil finish. The stock markings remain strong and the brass stock disc shows stamped Arabic writing. The stock and 2.5 power Meopta scope are matching the receiver, the action cover is numbered "34505" and the scope mount "822". The scope features a German-style reticle and slightly yellowed but serviceable optics, a cleaning kit is housed in the butt and the action seems to function well mechanically. The late pattern snipers are equipped with FN factory-offered Echo mounts on-which the Egyptians then fitted their earlier pattern Meopta scopes. A very fine example of these excellent quality military rifles in proper sniper configuration, generally considered the last battle rifle of "old world quality" (13B9807-76) {C&R} [Vincent Coniglio Collection] (3000/5000) Est. 3.000 - 5.000 443 Swedish M41 Bolt Action Sniper Rifle by Carl Gustafs serial #349278, 6.5x55mm Swedish, 29" barrel with a bright very good plus bore showing some scattered tiny pinprick pits and strong rifling throughout. The metal surfaces of this 1915-dated rifle retain about 95% arsenal refurbished blue showing some light high edge wear, a few errant freckles and minor handling marks. The bolt remains mostly bright showing some mild gray freckling and the small parts retain strong fire blue. All markings are intact and strong and the rifle does not appear to be import-marked. The area behind the trigger has been relieved slightly and the trigger itself has been "straightened" somewhat as it is not as curved as a factory example, these discrepancies however are rather unobtrusive. The 3-power AGA M/42 scope is numbered "974" and retains about 96% original blue and black enamel finishes showing some high edge wear and minor handling marks. The scope features a German-style reticle and very slightly cloudy but serviceable optics. The smooth hardwood stock and handguard remain in about very good plus condition showing some scattered fine scratches and mild staining, minor dings and the expected overall light handling marks. The stock shows crisp crown inspector stamps behind the triggerguard and the stock disc is stamped "KIK / i16 / No 1311". The safety is numbered "209", the rear sight parts are "558", the scope base is "1311" while the mount and rings are "1313". The remaining serialized parts are matching and the action seems to function well mechanically. An original front sight hood is present and a set of leather scope covers, leather sling and quick detach swivel showing moderate wear are included. A very good example of these fine Swedish sniper rifles. (13B9807-58) {C&R} [Vincent Coniglio Collection] (1800/2200) Est. 1,800 - 2,200 444 Japanese Type 97 Arisaka Bolt Action Sniper Rifle by Nagoya serial #2667, 6.5 Arisaka, 31" barrel with a bright excellent bore. The metal surfaces of this first series rifle retain about 95% original blue showing some high edge wear, some areas of mild thinning and scattered small spots of minor oxidation staining. The dust cover shows some more moderate old oxidation staining overall toning to a mix of blue and deep plum-brown patina. All markings remain intact and crisp and the chrysanthemum is completely intact and unmolested. The 2.5 power scope retains about 96% original black enamel finish showing some minor flaking and handling marks. As-is typical the scope is mismatched with the mount marked with a first series kanji and number "13182", the scope body is numbered "14363" and the rubber eyepiece has mostly been lost showing some hardened remnants. The optics with correct Japanese reticle are very good showing some scattered fine black flakes in the field of view, otherwise remaining serviceable. The Asian hardwood stock and handguard remain in very fine condition retaining most of their original finish and showing a few darkened areas along the comb, handguard and edges, a mild abrasion along the bottom right edge, some scattered light dings and handling marks. The stock retains crisp kanji stamps behind the pistolgrip and along the toe line. The rifle is equipped with a monopod-style barrel band (sans monopod hardware) and an original cleaning rod is present. The dust cover is numbered "836", the remaining bolt parts and front band are matching the receiver and the action seems to function well mechanically. A very fine Type 97 for the Japanese martial collector. (13B9807-112) {C&R} [Vincent Coniglio Collection] (3000/4000) Est. 3,000 - 4,000

Egyptian FN-49 Late Pattern Semi-Auto Sniper Rifle by Fabrique

	serial #A0054T, 303 British, 25 1/4" barrel with a bright near excellent bore perhaps showing a few areas of faint frosting in the grooves with strong rifling throughout. The metal surfaces of this FR 1962-dated rifle retain perhaps 60% arsenal black enamel finish showing overall flaking to mottled gray patina, some scattered light dings and handling marks. All markings remain intact and strong with maker-markings on the right side socket, mark designation on the left side receiver wall along with "T" and a discreet SPR import mark at the rear right side of receiver. There are matching serial numbers on the right side receiver ring, right side socket, bolt handle and barrel shank beneath the handguard and a number of the smaller parts show various manufacturer markings. The rifle is equipped with a No. 32 Mk.3 telescopic sight and mount that retain about 95% black enamel and dark gray Parkerized finishes showing some light high edge wear and the scope with some flaking along the objective. All markings remain intact and crisp with strong manufacturer markings, red-painted "W", blue "B" and the scope is numbered "24671". The scope rings are matching the mount by numbered "N36850". The scope features typical single post with crosshair reticle and very good optics that are slightly yellowed but completely serviceable. The smooth hardwood stocks remain in about very good condition showing some scattered shallow light chips, mild abrasions and dings. There are remnants of a painted green "1" on the right side butt along with a softened carouche, the fore-stock appears to be faintly numbered "20935" and the original scope number on the wrist is also quite faint but appears to have been either "6771" or "6772". The included magazine has been arsenal-renumbered to match the rifle and the action seems to function well mechanically. Also included are a 1941-dated canvas action cover that shows some moderate foxing, pair of leather scope covers with Broad Arrow stamp that rate very good and an original loive drab metal sc
446	Scarce Norinco NDM-86 Dragunov Semi-Auto Sniper Rifle serial #20019, 7.62x54mmR, 24 1/2" barrel (27 1/2" overall including compensator) with a bright excellent bore. The metal surfaces of this 1980's imported commercial rifle retain about 96% original black enamel finish showing some scattered tiny flakes, light handling marks, some light wear along the scope mount rail and an area of small marks behind the ejection port. The bolt and carrier are a pleasant mild gray tone and all markings remain intact and strong with "NORINCO / CHINA" etched on the right side receiver and the left side showing a small "CSI ONT CA" import mark. The laminated hardwood pistolgrip buttstock with Bakelite pistolgrip cap and two-piece forend remain in near excellent condition retaining most of their arsenal-quality varnish showing some scattered light dings and handling marks. The buttstock is numbered "300638" and is equipped with a removable cheek rest that is numbered matching the rifle. All remaining serialized parts appear to be matching, one original unmarked magazine in near excellent condition is included and the action seems to function well mechanically. A tan Russian-made sling in very fine condition and an unmarked correct style commercial scope with mount are also included that rate near excellent showing some scattered light handling marks along the exterior. The scope features illuminated reticle function (no batteries present), range-finding reticle and the optics show moderate yellowing but remain very serviceable. A very fine example of these increasingly desirable and excellent quality Dragunov clones. (13B9807-182) {MODERN} [Vincent Coniglio Collection] (5000/7000) Est. 5,000 - 7,000

469 Colt Pre-Ban AR-15 A2 HBAR Sporter Semi-Auto Rifle 472 Winchester Pre-64 Model 64 Deluxe Lever Action Rifle serial #SP232153, .223 / 5.56mm, 20" HBAR barrel with a 1:7" rate of serial #1411316, 32 W.S., 24" barrel with a bright, excellent bore. The twist and an excellent bore. The metal surfaces retain about 99% metal surfaces on this WWII production rifle retain about 90% original original parkerized finish that has a few very light handling marks. The blue that is lightly toning to brown and has some light handling and tool black Zytel round handguard, standard pistolgrip and the A2 fixed marks throughout and some moderate edge and bearing surface wear buttstock all rate excellent. Rifle features include A2 sights, a flash hider, that is most visible around the receiver and edges of the buttplate. There bayonet lug, brass deflector and forward assist. The upper receiver is are a few very light specks of fine surface oxidation scattered throughout "C/M" cast marked on the right side just ahead of the rear sight, the as well. The factory markings remain crisp including the Winchester firing pin is chromed and the bolt is marked "MP" & "C" and the carrier is factory proofs located at the top of the barrel and receiver. The deluxe "C" stamped. The original green label box is included and contains the grade checkered walnut stocks rate near excellent and have some manual, a black nylon sling, one 30 round magazine marked "NHMGT lovely rich figure to both the forearm and the pistolarip buttstock. The S/42", the muzzle cover and cardboard bore protector. The box is in fair wood has some light dings and other handling marks associated with to good condition, the ends have been ripped and taped, the end label period use, the buttstock is fitted with a factory gripcap, factory inset was renumbered to match the rifle. This is a near-pristine example of deluxe sling swivel base and checkered steel buttplate and has some these early HBAR Sporter rifles that would make a fine addition as either light chipping at its toe. The original hooded front sight remains intact, a potential collectible or super target rifle at the range. (4A9908-15) the rear sight has been removed and its dovetail is filled with a {MODERN} (1800/2200) grayed-edge slot blank. A Redfield adjustable rear sight with aperture Est. 1,800 - 2,200 has been installed at the rear of the receiver. Overall this is a very fine 470 Custom Winchester Pre-64 Model 70 Alaskan Bolt Action Rifle By mid-1940's production Deluxe Grade Winchester lever action that has Pachmayr seen some use but was apparently valued and appreciated by its former bearer. (4B9864-1) {C&R} (2000/3000) serial #537643, 338 Win Magnum, 25" factory barrel with an excellent bore. Originally built in 1961, the metal surfaces retain about 97-98% of Est. 2,000 - 3,000 473 a professionally applied polished blue finish that has some light handling Reminaton New Model Army Percussion Revolver wear, small tool marks and few areas of fine surface oxidation. The serial #36793. .44 cal., 8" octagon barrel with a bright minty bore. This barrel has been stamped "CUSTOM MADE BY PACHMAYR LA revolver retains lots of bright original blue. The barrel and loading lever CALIF. U.S.A." above the factory Winchester address. The follower and retain about 85% original blue with most loss due to just some light bolt body are machine polished, the underside of the bolt is electric flaking. The cylinder retains about 75% bright original blue with loss due pencil etched serial numbered to the receiver and is still mostly visible. to flaking. The frame shows about 60% original blue with flaking. All the bolt knob is finely checkered in a custom teardrop pattern. The rifles areas of flaking on the revolver show a pleasing smooth brown patina. is stocked in a lovely piece of highly figured checkered walnut that rates The hammer shows a good deal of strong original color case hardened near excellent and has some small dings and other light handling marks finish. The triggerguard shows a wonderful mellow patina but doesn't fit throughout. The wide beavertail forend stock features an ebony forend quite as nicely as perhaps it should but it is not really noticeable unless tip that has a small crack on its upper left corner, a black gripcap with a you run your finger along the front and rear edges. The two-piece walnut blank brass oval monogram plate, a left side cheekrest, a solid red grips rate excellent retaining nearly all of their original oil finish and nice rubber Old English rifle pad and has a 13 3/8" length of pull. The original raised grain coming through. There is no cartouche but the bottom of sights remain intact, minus the front sight hood, the front sight blade has each grip shows inspector's initials "M" and "A". The left grip panel is been replaced with a sourdough sight. A one-piece Redfield scope base undersized along the front and rear gripstraps. Various metal surfaces has been mounted to the receiver and includes a set of 1" rings, the show sub-inspectors initials "A", "C" and "U". This is a very fine revolver base screws have some minor slot damage. Other features include a with lots of condition which was likely a state purchased piece. custom bolt release, Pachmayr triggerguard and bottom metal, and a set (1C9362-31) {ANTIQUE} [Edward W. Marron, Jr. Collection] (2000/3000) of Pachmayr flush mount quick-detach swivel bases which do not sit quite flush and were likely added well after the rifle left the Pachmayr Est. 2,000 - 3,000 474 Cased Pair of British Percussion Pocket Pistols by William Ellis shop. Also included is a Butler Creek padded nylon sling. America's Master Gunsmith, Frank Pachmayr, provided many highly valued .45 cal., 1 3/4" barrels with near excellent bores. This is a lovely little custom rifles over the 50 plus years he was in business. Frank came pair of pistols. The round-body action and barrels each retain about from a gunsmithing family learning his trade from his father Gus, a 95-97% original color case-hardening, muting somewhat in spots with German immigrant and old-world smith. He began turning barrels at a some minor handling marks or dings from the years. There is a tasteful young age and has since produced many high-end sporting arms that ring of engraving at the muzzle with light scroll on the left and right of are highly sought after today. A true blending of American and European each action, the left with a square bordered panel with "William Ellis" at styles are seen in many of his works, this example is certainly no its center. The hammers are neatly engraved as well and retain nearly exception. A very collectible Winchester in its own right that is only all of their original color case-hardening; there are rear-sliding safeties which currently seem frozen in place. The bag shaped English walnut improved by the reputation of the gunsmith who performed the work. This is a highly desirable sporting rifle that has seen some honest use grips rate excellent with much original varnish and some minor dings and would be a fine addition to any custom rifle collection. (4C9808-17) and handling marks from the years. They feature un-engraved silver {MODERN} (2000/4000) diamond-shaped monogram plates atop the wrist. The guns function Est. 2.000 - 4.000 well mechanically. The pistols are cased in a nice walnut presentation 471 Scarce Winchester Pre-64 Model 88 Lever Action Rifle case with brass reinforced corners. Inside is what is likely the original serial #113941, 358 Win, 22" barrel with an excellent bore. The metal combination nipple and barrel wrench, it is nicely color case-hardened, surfaces retain about 99% original blue that has some light handling an iron bullet mould, a brass-bodied fixed common top flask which rates marks and a few specks of very light surface oxidation mingling very good and percussion caps included. A very pretty set of pistols throughout. The barrel is lightly toning to brown while the lever shows overall in a rather nice period casing, remaining in very fine condition. more of a rich plum hue when held under a light. The Winchester proofs (3C9654-3) {ANTIQUE} (2000/3000) on the left side of the barrel and receiver are lightly stamped on one of Est. 2,000 - 3,000 each of their edges, the remaining factory markings remain crisp. The diamond checkered walnut stock rates near excellent and has some light dings and other light handling marks and some very light chipping around the edges and perhaps some added lacquer finish throughout. The wood has some nice grain and the sling swivels, steel gripcap and checkered hard rubber buttplate all remain intact. The original sights, including the front sight hood, remain intact and the receiver is factory tapped for mounts. The action appears to function correctly and included is a single concave arrow based magazine. Made in 1961, toward the end of this models production, this is a terrific example of these desirable lever action sporting rifles that is in the most collectible

482	Colt Model 1877 Thunderer Revolver	487	Marlin Model 1888 Lever Action Rifle
	serial #63649, 41 Colt, 3 1/2" round barrel with a bright excellent bore.		serial #23668, 38-40, 24" octagon barrel with a near excellent bright
	This 1888 production revolver shows proper two-line address and is		bore with just a handful of very tiny pits near the muzzle and strong
	marked on left side "COLT. D.A. 41". The frame shows proper three-line		rifling. The receiver, barrel and tube retain 99% plus museum-quality
	patent dates which are poorly struck with the upper right section		restored blue with some minor handling marks and old blemishes under
	missing, the Rampant Colt in circle is strong. The barrel and cylinder		the fantastic new finish, these marks are really only visible under very
	show 90 - 95% strong original blue with most loss at muzzle and leading		close scrutiny. The metal work must have been painstakingly-done, all
	edge of cylinder. The frame shows about 50% original color case		edges and factory markings are sharp and crisp. The lever, buttplate
	hardened finish with areas of loss showing a pleasing brown patina with		and hammer show strong original case-hardened color remaining,
	a little light oxidation staining. The gripstraps retain 60% bright original		particularly around the pivot pin and hammer. The smooth walnut
	blue with majority of loss on the straps. The two-piece hard rubber grips		straight-grip buttstock and metal-capped forend are structurally excellent
	rate near very good with considerable wear on the left panel and less on		with light handling marks, the later-added lacquer finish has nicely
	the right. This is a very fine example of these early Colt double action		crackled throughout giving the wood a nice "antique" look; the metal
	revolvers. (1B9898-23) {ANTIQUE} (1500/2500)		proud in spots, the wood in others The front sight is a Rocky Mountain
	Est. 1,500 - 2,500		blade and the rear sight is a semi-buckhorn sporting sight with elevator.

	even brown patina overall with some patches of light pitting present in a	400	<b>o</b>
	couple areas. The cylinder shows 95% of its deeply rolled stagecoach		serial #134762, 38 Special, 5 1/2" replacement factory barrel with a
	holdup scene with perhaps 65% bright original blue remaining but with		bright excellent bore. This 1890-manufactured revolver was factory
	some scattered pitting which is confined primarily to one chamber. The		refurbished and remains in very good condition with about 60-70%
	frame shows a mix of fading original color case hardening and gray		original and reapplied blue finishes. The replacement barrel and cylinder
	patina with a few patches of pitting present. All markings remain clear		have original blue, the grip frame assembly later applied dull blue, all
	and legible on the revolver. The loading lever shows strong original color		showing high edge wear and handling marks. The black powder frame
	case hardened finish. The brass gripstraps retain about 40% original		has toned to mostly gray but there are a few vestiges of original
			case-hardened colors in the sight groove and protected areas of the
	silverplated finish with loss coming on the front and rear strap where the		
	brass has taken on a pleasing mellow patina. The one-piece walnut grip		right side of the frame around the ejector rod swell. The hammer is
	rates about excellent with 95% original finish remaining and with light		toning to gray but has strong swirls of case-hardened colors on the
	handling marks. The revolver comes in a custom case handmade in the		sides. The grips are checkered hard rubber replacements numbered to
	same style as the originals with softwood base and mahogany sides and		another gun, featuring a Rampant Colt in an oval at the top showing light
	top. The case has been refinished and is lined in burgundy baize and		wear overall with slightly soft "ponies" but rate very good to excellent. An
	includes an eagle flask, two cavity mould, an Eley cap tin and some cast		interesting observation is the left front triggerguard bow has a Colt

(5C9896-116) (ANTIQUE) (2000/3000) Est. 2,000 - 3,000       Sharps Civil War Cartridge-Converted 1863 Carbine serial #66374, 50-70 Govt., 22" barrel with a bright excellent three groove bore. This is quite a handsome little carbine. The barrel retains about 97-98% arsenal blue, done at the time of the conversion, showin some light flaking to plum, the barrel band with very good smoky silven case-hardening. The frame and breech block retaining perhaps 92-95% original color case-hardening noning mostly on the front edge of the lef frame flat, the right stronger, the left flat quite strong, with the tang tone to pewter. The lockplate as well shows some strong color case-hardening with smoky case colors on the hammer. The straight grip walnut buttstock rates very fine with much original varnish and a strong left-side cartouche at the center of the but. The forend is similar with sharp edges and only minor dings and handling marks, one small divot to the rear of the band. The lock is crisp and mechanically functional and the left-side saddle ring is intact on the sling bar, the butplate showing some smoky gray case hardening, originally from a patchboxed arm. The barrel is serial numbered to the frame along with number "45" stamped adjacent to it. A very pleasing example of the cartridge converted Sharps Carbine still retaining some rather nice color				
and two highly visible cartouches. The barrel frame and frame are numbered alike, the barrel is numbered to a different arm. The barrel locks up solid and the hammer functions crisply.
